

THE TACTIKS OF ÆLIAN L^{ib}. 6. 1

Or art of embattailing an army
after y^e Grecian manner

Engraved & illustrated wth figures throughout
& notes upon y^e Chapters of y^e ordinary
motions of y^e Phalange by J.B.

The exercise military of y^e English by y^e order
of that great Generall Maurice of
Nassau Prince of Orange &c
Gouverneur & Generall of y^e
united Provinces is added

At London for Laurence Isb & are to be sold at
his shoppe at y^e signe of the Tiger Head
in Pauls Church-yard &c

Georgius sculpsit

Woudrichem in Hollandia

94. 273

TO THE HIGH AND MIGHTY CHARLES, ONLY

SONNE OF HIS MAIESTY, PRINCE OF
Wales, DUKE of Cornewall, Yorke, and Albany, MAR-
QVISE of Ormont, EARLE of Chester, and Ross,
LORD of Admanoch, and KNIGHT of the
most noble order of the Garter.

How much the *Gracians* excelled all o-
ther Nations in the Sciences called
Liberall, is better knowne in gene-
rall, then needfull at this time parti-
cularly to be rehearsed to your *Higb-
nesse*. The *Romans* themselves albeit
otherwise ambitious, and out of mea-
sure thirsty of honour, and challen-
ging to themselves the highest degree of grauity, constan-
cie, greatnesse of minde, wisdome, faith, and skill of war,
contended not herein, but freely left them the possession
of that praise vnquestioned. For warre it is not my pur-
pose at this time to make comparifon, or commit the two
Nations together. The controuersie is already moued by
other, and hangeth vndecided in the Court of learning.
Thus much, me thinks, I may truly affirme, that the *Gra-
cians* were the first, that out of variety of actions, and long
experience reduced the knowledge of Armes into an *Arte*,
and gaue precepts for the orderly moving a *Battaille*, and
taught, that the moments of victory rested not in the
hands

A

hands of multitudes, but in a few men rightly instructed to manage armes, and trained vp in the obseruation of the discipline of the field. In which regard they had almost in all Cities amongst them Masters of Armes, whom they called *Tacticks*, which deliuered the Arte Military to such, as were desirous to learne. Out of whose Schooles issued those chiefs of warre in number so many, in skill so exquisite, in valor so peerelesse, in all vertues befitting great Generals so admirable, that no Nation of *Europe* euen to this day hath been able to match, much lesse to ouer-match their fame, and glory. And the time was when the *Lacedemonians* exceeded the rest in Martiall skill, and were thought to be the best Souldiers of *Greece*, by meanes whereof they aduanced themselues to the Principality of *Greece*, which they held with such reputation, that an enemy by the space of 500 yeares was not seene within their Territory. Till at last growing insolent, and surfeiting of, and being not able to brooke their owne fortune, they sought to oppresse, and with wrong and force to possesse the City of *Thebes*, and stirred vp *Epaminondas* a *Theban* by birth, and from his tender yeares nourished by his fathers care in the study of Philosophy, and the science of Armes, to oppose against them, who in two battailes, the one at *Leuctra*, the other at *Mantineia* so broke their forces, that from that day forth they were neuer able to recouer their wonted authority, and power in the field. *Philip* the sonne of *Amyntas* King of *Macedonia*, being but a priuate man, was deliuered as a hostage to the *Thebans*, & brought vp in the same house and learning with *Epaminondas*. He afterward became King of *Macedonia*; which being of it selfe but a poore kingdom, and before his time sometimes kept vnder by the *Athenians*, sometimes by the *Lacedemonians*, sometimes by the *Thebans*, & finding it at his entrance

to

to the Crowne harried, and spoiled by the *Pæonians*, and forced to pay tribute by the *Illyrians*, by erecting a new arte, and discipline of warre, to which he exercised, and enured his *Macedonians*, he not only freed his Countrey from the Barbarous nations, but also ouercame the *Græcians*, accounted the only Masters of armes till that day, and caused himselfe to be declared Generall of *Greece* against the *Persians*: against whom after he had made his full preparation, he resolved to go in person. But being preuented by death, he left the succession of his kingdom, and execution of his designes to *Alexander* his sonne, whom he had before curiously instructed in the discipline of Armes inuented by himselfe. The same *Alexander* (being about 20 yeares of age) after he had vanquished *Darius* in 2 great battailes in 12 yeeres ran through, and subiected the spacious, rich, and flourishing kingdomes of *Asia*, euen as far, as the *East Indies*, and with terror of armes made the whole world to tremble at his name. His kingdomes were after his death diuided amongst many Successors, who by the same Arte military easily maintained the possession of their conquests. This Arte is it, that I at this time present vnto your Highnesse. It was comprised in writing by many, and yet none of their works attained our age, but only that of *Ælian*, who hath in a small volume so expressed the arte, that nothing is more short, nothing more linked together in coherence of precepts, and yet distinguished with such variety, that all motions requisite, or to be vsed in a Battaille are fully expressed therein. *Ælian* liued in the time of *Adrian* the Emperour. How much the booke was of ancient time esteemed may appeare by this alone, that *Leo* a succeeding Emperour setting downe Martiall instructions for the gouernment of his Empire, transcribeth whole passages out of *Ælian*, & whensoever he citeth, or nameth the *Tacticks*, he giueth still the first place vnto *Ælian*.

A 2

Howbeit

Howbeit the practise of *Aelians* precepts hath long lien wrapped vp in darknes, & buried (as it were) in the ruines of time, vntill it was reuiued, & restored to light not long since in the vnited Prouinces of the low-Countries, which Countries at this day are the Schoole of war, whither the most Marti- all spirits of *Europe* resort to lay downe the Apprentiship of their seruice in Armes, and it was reuiued by the direction of that Heroicall Prince *Maurice* of *Nassau*, Prince of *O- range*, Gouvernour, and Generall of the said Countries, a Prince borne and bred vp in Armes, and (beside the completeness of his other eminent vertues) for skill, experience, iudgement, and military literature comparable to the greatest Generals, that euer were. I haue of late aduentured to take from *Aelian* his *Greekish* cloake, and to put him in *English* appa- rell, that in that habit he might attend your Highnesse, and be ready with his seruice, in case he were thought worthy of employment. He had before for his Patron *Adrian*, an Em- peror, and Ruler of the *Roman* world. Now he humbly craueth your HIGHNESSE fauour for his protection, who as in Princely descent, and succession of Royall blood you are farre superior, so in vertues worthy of your birth, and yeares, and in all hopefull expectations are you nothing in- ferior to *Adrian*. It may please your Highnesse to regard him with a gracious eye, and to esteeme the Presentor of him your faithfull bedesman, that will not cease to pray to the mighty God of hosts, to giue you conquest ouer all your enemies. From my Garrison at *Woudrichem* in *Hol- land* the 20 of September 1616.

Your Highnesse most humbly
deuoted,

IO: BINGHAM.

THE TACTICKS OF *ÆLIAN* or art of embattailing an army after the Grecian manner.

THE *Grecian* arte of embattailing an army (most mightie *Augustus Cesar Adrian*) the antiquitie whereof reacheth back to the age wherein *Homer* lyved, hath beene committed to wry- ting by many, whose skill in the *Ma- thematicks* was not reputed equal with myne: whereby I was induced to thinke it possible for me foe to deliver the groundes therof, that posteritie should rather regard and esteeme my labors, then theirs, that be- fore me haue handled the same argument. But weighing againe myn own ignorance (for I must confesse a truth) in that skill & practise of armes, which is now in esteeme among the *Romaines*, I was by feare with-held from re- uiving a science half dead, as it were, and since the inven- tion of that other by your auncestors, altogether out of request and vnregarded. Notwithstanding comming afterward to *Formie* to doe my dutie to the ¹ Emperour *Nerva* your maiesties father, It was my fortune to spend sometime with ² *Frontine* a man of Consular dig- nitie, and of great reputacion by reason of his experience

A in

in militarie affaires: and after conference with him perceiving he imparted no lesse studie to the *Grecian*, then to the *Romaine* discipline of armes I began not to despise that of the *Grecians*, conceiving that *Frontine* would not so much affect it, if hee thought it inferiour to the *Romaine*. Having therefore in times past framed a project of this worke, but yet not daring then to publish it in regard of your majesties incomparable valour, and experience, which make you famous aboue all Generalls without exception, that euer were: I haue of late taken it againe in hand, & finished it, being (if I deceaue not my self) a worke both worthy to be accompted of, & of sufficiency, especially with such as are studious of the arte, to obscure the credit of the auncient *Tacticks*. For in respect of the perspicuitie I dare bouldlie affirme, the reader shall more advantage himselfe by this little volume, then by al their writings: such is the order and methode, I haue followed. Howbeit I durst scarcely offer it to your majestie who haue beene Generall of so greate warres, least happily it proue too too slender a present, & altogether vnworthy of your sacred viewe. And yet if your majestie shall bee pleased to thinke of it, as of a *Greekish Theorie*, or a various discourse it may bee, it will giue you some little delight, the rather because you may therein behold ⁴ *Alexander the Macedons* manner of marshalling his fields. And for that I am not ignorant of your majesties more weightie affaires, I haue reparted it into chapters, to the end you may without reading the booke in few wordes take the somme of that, which is to bee delivered, and without losse of time find the places you are desirous to peruse.

Notes.

Notes.

THE Tacticks] As *Taxis* in a general sence signifieth order, so *Tacticos* is as much, as pertaining to order: but specially taken, it signifieth pertaining to order of a battaile, or to the embattailing of an army. Hereof the arte of embattailing an army is called *Tactice*, and hee, that is skillful, and experienced in that arte. *Tacticos* (^a *Vegetius* nameth him *magistrum armorum*) and the books written of the arte, *Tactica*. And that this is the true signification of the word may appeare by *Xenophons Cyropædia*, where the arte *Tactick* is distinguished from the arte *Imperatory*, or arte of a Generall. Hee induceth *Cyrus*, in a discourse with his father speaking thus: ^b In the end you asked mee what my master taught mee, when hee professed to teach the art *Imperatory*. And when I answered, the *Tacticks*, you smiled, and asked particularly, what the *Tacticks* availed without provision of thinges necessary to liue by: what without preservation of health? what without knowledge of arts invented for the vse of warre? what without obedience? so that you plainly shewed, that the *Tacticks* are but a small portion of the arte *Imperatory*, or of commanding an army. Thus *Xenophon*: making a difference between the arte *Imperatory*, & the arte *Tactick*. And in other place hee speaketh yet more particularly: ^c *Cyrus*, sayd hee, esteemed it not the duty of a *Tactick* to enlarge onely, or to stretch out in length, the front of his *Phalange*, or to draweit out in depth, or to reduce it from a winge to a *Phalange*, or to countermarche readily, the enemy shewing himselfe on the right, or left hand, or in the rear, but to diuide it, when need is, & to place euery part for most advantage, & to leade it on speedily, when occasion is of prevention. Yet sometimes in a general signification books entreating of the whole arte of warr are called *Tacticks*: as the *Constitutions military* of the Emperour *Leo* are entituled *Tactica Leonis*, perhaps of the best parte, because the arte of embattailing an army hath alwayes been esteemed the chiefe point of skill in a Generall. Howbeit *Ælian* in his title of this booke taketh *Tactice* in the streighter signification: as appeareth by the definitions, he alleageth out of *Æneas* and *Polibius*: of whome the first defineth the art *Tactick* to bee a science of warlike motion; with whome also *Leo* agreeth: the other, to bee a skill, whereby, a man taking a multitude serviceable, ordereth it into files, and bodies, and instructeth it sufficiently in all thinges appertaining to warre. Which two definitions comprehend in few words the argument of the whole booke. For first *Ælian* intreateth of levieng, & of arming men, then of filing, next of joyning files, and making bodies, after of ordering the whole *Phalange*, or battaile, further of motions requisit to affront the enemy, whersoeuer he giueth on, whether in front, flank, or reare; lastly of marching, and of the sondry formes of battailes carieng with them advantage of charging or repulsing the enemy in your marche. He; that will further understand the boundes of this arte, let him read in the 21. chapter of *Leo* the 58. section.

¹ The Emperour *Nerva* your maisties Father] The Emperour *Nerva* here mentioned was not *Nerva Cocceus*, whoe succeeded *Domitian*, but *Vlpius Traianus*, who was also called *Nerva*, because he was adopted by *Nerva Cocceus*, & succeeded in the Empire. And where *Ælian* termeth him *Adrians* father, indeed *Adrian* pretended, he was *Traians* sonne by adoption. But ² *Dio* plainly denieth it. & *Spartian* saith, some reported hee was adopted by the faction of *Plotina* (*Traians* wife) by substituting one to speake with a faint voice, as if it had beene *Traian* vpon his death-bed, whereas *Traian* was before departed this world. This is agreed, that he was *Cosin german*

A 2

german once removed to Traian, & that his father dieng, he (being but ten yeares olde) was ward to Traian (then a private man) and to one Calius Trianus.

2 To spend some time with Frontine] Frontine heer mentioned was the same that wrote the book of Strategemes, now extant, & commonly ioyned in one volume with Vegetius. Hee was a man curious in the searche of the Gracian discipline, as may be scene by his owne preface to his bookes of Strategemes: & by the testimony of Elian, & in the first chapter of this treatise, is reckoned amongst the Tactick writers. ^a Vegetius reporteth he was much esteemed by the Emperour Traian. Hee lived also in greate reputation in the time of Vespasian: at least if it bee hee, that Tacitus speaketh of in the life of Iulius Agricola. And yet it might bee he very well, there being noe more then twenty yeares, & certeine monthes betwixte the reigns of Traian, & the reigns of Vespasian in whose time Frontine is reported by ^b Tacitus to haue overthrowne the Silures in Britaine. Elian in the next chapter calleth him Fronto. Of one Fronto, that was Consul in the third year of the reigns of Traian, I read in ^c Dio: whose saying is reported to haue been: That it was ill to haue an Emperour, vnder whom noe man might haue liberty to doe any thing, but much worse to haue an Emperour, vnder whom every man might doe what hee list. But this Fronto was not Elians Fronto. Hee was called Marcus Cornelius Fronto; this (that Elian speaketh of) Iulius Frontine. And yet it is noe wonder that Frontine in latine should be called Fronto in Greeke, it being vsual for the Gracians to varie, and deflect a litle from the property of the latine names.

3 Your majesties incomparable valor & experience] That this praise given Adrian is not altogether without cause, may appeare by that, which ^d Elius Spartianus writeth in the life of Adriā. His wordes haue this meaning: After this, taking his journey into France, he was bowntifull to all, as he sawe cause. From thence hee passed into Germany, & being rather desirous of peace, then warre, yet hee so exercised his souldiers, as though warre were at hand; teaching them to indure paines & hardnesse, himselte giving an example of military life: gladly also vsing Camp-fare, as namely lard, & cheefe, for meate, & water mingled with vineger for drinke, in imitation of Scipio Emilianus, & of Metellus, & of Traian the author of his preferment & rising, bestowing rewardes vpon many, honors vpon some, to encourage them to beare such things, as seemed harsh in his commaundes. And surely it was hee next Octavius, that vpheld military discipline (declining nowe through the remissenesse of former Emperours) by ordering both the places of Commaunde, & the payes; never suffering any man to absent himselte from the Campe, but vpon iust cause: measuring the worthe of Tribunes not by fauour of the souldiers, but by their owne desert; exhorting, & exciting all the rest by example of his owne vertue, whilest hee often marched twenty miles on foote, being fully armed, broke downe banquetting howses, and galleries, & vaults for coolenesse, & arbors, wherefoever hee fownd them in the Campe; & was leene in a plaine garment vsually wore a baudricke not garnished with gold, buttons without gemmes; scarcely allowing an ivory handle to his sword; visited his sick souldiers in their lodgings, himselte chose out the grownd to encampe in: made noe Captaine, but a man of a strong body, noe Tribune, but with a growne beard, or of age, that by prudence, and yeares was able to sway the weight of the place: nor suffered him to take ought from the souldier; removed all delicacies; and lastly reformed their armes, and baggage. Hee had besides consideration of the age of souldiers, allowing none younger, then was befitting vertue; nor elder, then stood with the lawes of humanity, to bee conversant in the Campe, contrary

^a Veget. lib. 2. cap. 1.

^b Tacit. in vita Ag. col. 1.

^c Dio in vita Nerva.

^d Spartian. in vita Adriani.

rary to old custome, and vsage: and gaue himselte to haue particuler knowledge of them all, and what their number was. Furthermore hee was carefull to vnderstand the controversies betwixt souldier and souldier, and searched with great attentiuensse into the revenues of the Provinces, to the end to supply, what was wanting; endeavouring notwithstanding aboute all neither to buy, nor feede ought, that was not for vse. Wherefore when he had fashioned his souldiers to his owne example, he passed over into Britaine, where hee corrected many things, and was the first, that drew a wall along by the space of eighty mile; wherewith hee diuided the Romans from the barbarous people. Heereto Spartian. I haue recited the history at large, because I might represent the picture of an excellent Generall.

4 Alexander the Macedons manner.] That this booke comprehendeth the Macedonian discipline of armes, I will shewe heereafter, as particulars offer themselves. In the meane time let this suffice for an argument, that Elian doubteth not to asseme it to Adrian, a Prince excellently learned in the Greeke language; and as by reason of his skill hee was able to discern, so by his authoritie hee would haue censured so grosse an escape, if it had bene otherwise, then Elian reporteth.

THE CONTENTS OF THE Chapters of the Booke.

- THE Authors, that haue written Tacticks; of this booke, & of the profit of the arte. Chap. 1.
The preparation of warlike forces, and how they are to be armed. Chap. 2.
The framing of a Phalange, and definition of the art Tactick. Chap. 3.
What a file or decury, is and of how many men it consisteth. Chap. 4.
The order and partes of a file or decury. Chap. 5.
Of ioyning files. Chap. 6.
Of a Phalange: the length, and depth thereof; of Ranking, and filing. The division of the Phalange into wings, The place of the armed foote, of the light armed, and of the Horse. Chap. 7.
The number of the armed foote, of the light armed, & of the horse. Chap. 8.
The names of the severall partes, and the Commaunders of the seuerall partes of the Phalange, and of the numbers vnder their Commaunds. Chap. 9.
The precedence, & dignitie of places in the Offices of the Phalange. Chap. 10.
The distances to be observed betwixt souldier, and souldier in opening, or shutting the Phalange. Chap. 11.
The arming of the Phalange. Chap. 12.
The worth the file-leaders, and next followers should be of. Chap. 13.
Of the Macedonian Phalange, & the length of the souldiers pikes. Chap. 14.
The place of the light armed, & the number of euery file of them. Chap. 15.
The names of the bodies of the light armed. Chap. 16.

- The vse of the light armed. Chap.17.
 The fashion of horse battailes; the *Rhombe*, the wedge, & the Square. Chap.18.
 Why *Rhōbs* were first brought into vse, & of the diuerse formes of the. Cha.19
 The place of horsemen in the field, & the number of the vsuall horse-battaile,
 and the degrees & names of the officers of the horse in generall. Chap.20
 The diligence to bee vsed in choise, and exercise, of the best formes of bat-
 tailes. Chap.21
 Of Chariotts; the names, and degrees of the Commanders. Chap.22.
 Of the Elephants: the names, and degrees of their Rulers. Chap.23.
 The names of the militarie motions expressed in this booke. Chap.24.
 Of turning, and double turning of the souldiers faces, as they stand embat-
 tailed. Chap.25.
 Of wheeling, double, and treble wheeling of a battaile, and of returning to the
 first posture. Chap.26.
 Of filing, ranking, and restoring to the first posture. Chap.27.
 Of Countermarch, and the diuerse kinds thereof, with the manner how it is
 to be done. Chap.28.
 Of doubling, and the kinds thereof. Chap.29.
 Of the broadfronted *Phalange*, the deepe *Phalange*, or Herse, and the vncuen
 fronted *Phalange*. Chap.30.
 Of *Parembolē*, *Protaxis*, *Epitaxis*, *Prostaxis*, *Entaxis* & *Hypotaxis*. Chap.31.
 The manner how the motions, of the *wheeling*, *Double*, and *Treble wheeling*
 of a battaile are to bee made. Chap.32.
 Of closing of the battaile to the right, or left hand, & to the midst. Chap.33.
 The vse and advantage of these exercises of armes. Chap.34.
 Of signes of directions, that are to bee given to the army, and their severall
 kinds. Chap.35.
 Of *Marching*; of diuerse kinds, of battailes fitt for a *March*; of the right Induc-
 tion, of the *Coelembolēs*, and of the *Triphalange* to bee opposed against the
Coelembolēs. Chap.36.
 Of *Paragoge* or *Deduction*. Chap.37.
 Of the *Phalange* called *Amphistolomus*. Chap.38.
 Of the *Phalange* called *Antistolomus*. Chap.39.
 Of the *Diphlange* called *Antistolomus*. Chap.40.
 Of the *Phalange* called *Peristolomus*. Chap.41.
 Of the *Phalange* called *Himolistolomus* and of the *Plinthium*. Chap.42.
 Of the *Phalange* called *Heteristolomus*. Chap.43.
 Againe of the horsebattaile called the *Rhombe*, and the foote halfe-moone to
 encounter it. Chap.44.
 Of the horsebattaile *Heteromeres*, and the broad fronted foote battaile to be oppo-
 sed against it. Chap.45.
 Of another kinde of *Rhombe* for Horsemen, and of the *Epicampios Emprosthia* to
 encounter it. Chap.46.
 Of the foote battaile called *Cyrte*, which is to bee sett against the *Epicampios*.
 Chap.47.
 Of the Horse battaile, which is square in ground, and the wedge of foote to
 bee opposed against it. Chap.48.
 Of the Foote battaile called *Plesium*, and the Sawfronted foote battaile to encoun-
 ter it. Chap.49.
 Of

- Of overfronting the enemies battaile, and overwinging it, and of *Attenuation*.
 Chap.50.
 Of the leading of the *Cariage* of the Army. Chap.51.
 Of the wordes of command, & of certain *Rules* to be observed therein. Chap.52.
 Of silence to be vsed by souldiers. Chap.53.
 The manner of pronouncing the wordes of *Commande*. Chap.54.

The Authors that haue written Tactics; of this booke, and
 of the profit, of the Art.

CHAP. I.

Homer the Poet seemeth to bee the first, (at least we reade of) that had the
 skill of imbattailing an army, and that admired men indued with that
 knowledge, as appeareth by *Athenēus* of whome he writeth.

His like no living wight was found, nor any age did yeild,
 To Marshall Troopes of horse, or bandes of foote in bloudie field.

Concerning *Homers* discipline militarie, the workes of *Stratocles*, & of *From-
 tine* a man of Consular dignitie, in our time are to be read. *Æneas* perfected
 the Theorie thereof at large publishing many volumes of warfare, which were
 abridged by *Cyneas* the *Thessalian*. Likewise *Pyrrhus* the *Epirote* wrote *Tac-
 ticks*, and his sonne *Alexander*, and *Clearchus*, and *Pausanias*, and *Euangelus*, &
Polibius the *Megapolitan* (a man of great learning, *Scipioes* companyon) & *Eu-
 polemus*, and *Iphicrates*; *Posidonius* also the *Stoick* lett forth the art of warre, &
 many other, some in Introductions, as *Brion*, some in large *Tactic* volumes. Al
 which, I haue seene, and read, and yet thinke it not much to purpose to men-
 tion perticulerlie; being not ignorant, that it hath bene the manner of those
 writers for the most parte, to applie their stile not to the ignorant, but to such
 as are already acquainted with the matters they intreat of; as for the impedi-
 ments, which presented themselves to mee, when first I gaue my minde to the
 studie of this art, as namely neither to happen vpon sufficient Instructours, nor
 yet to find light, or perspicuitie enough in the precepts delivered: I will ende-
 vour, as much as I can, to remoue out of other mens way. And as often as
 wordes shall faile to expresse my meaning, I will for plainenes sake, vse the di-
 rection of figures, and pourtraicts, adioyning thereby the view of the ey, as an
 aide, and assistance, to the vnderstanding, & withall retaine the termes of aun-
 cient authours, to the end, that whosoever shal follow this booke for an intro-
 duction, being therein exercised both to the same wordes; & also to the vse
 of things expressed in them, may grow as it were acquainted, and imagine
 himselfe no straunger, when he cometh to read their workes. By which waies
 by me prescribed, I make no doubt, they will easely be vnderstood. Now that
 this art of all other is of most vse, may appeare by *Plato* in his booke of lawes
 where he saith: That the *Cretan Lawgiver* so contrived his Laws, as if men were alway
 prepared to fight. For all cities haue by nature vnproclaimed warre one against another.
 Which being so: what discipline is more to bee esteemed, or more auaylable
 to mans life, then this of warre.

IT seemeth by this Chapter, that the Authors, that haue of auncient time written Tacticks, haue bene many: and those not of such kinde of men, as haue given themselves to study, and contemplation alone, but of such, as besides their knowledge in good letters, haue bene actors in warre themselves, & (which is more) principall actors, some of them Generalls, other the next degree to generalls. Howbeit there is none heere mentioned by *Ælian*, whose workes are extant. Whereby may be esteemed the inestimable losse, these latter ages haue suffred in being deprived of such excellent monuments. I hope, I may so terme them without offence, though I haue not scene them. For what but excellent, can proceed from men of such excellencie in their profession? such as the most parte of those were. Yet, for some of them, I can say nothing, as finding little remembrance of them in auncient writers. Of this kind are Eupolemus, Sratocles, Hermias, Clearchus, Pansani- as: albeit such names may often bee founde: These are specially mentioned, and much commended. Of whome I will set downe, what I finde.

1 Frontine a man of Consular dignity I haue before noted some what of Frontine. Wee haue of his, as it is thought, other workes, besides his stratagemes: But this booke of Tacticks, whereof *Ælian* speaketh, wee haue not. I will onely adde the relation of *Vegetius* touching Frontine, who writeth thus: Cato the elder, albeit hee had bene both invincible in armes, and often Generall of great armies, beleueed yet hee should more profit his Countrey, if hee laid downe in writing the discipline of warre. For valiant actes are but of one mans age, but things written for the profite of the state endure for ever. Many other haue done the like, but especially Frontine: whose industry herein was greatly approved by the Emperour Traian.

2 *Æneas* perfected the Theory. *Æneas* is mentioned by *Polybius* in his 10. book, where he discourseth of signes to be made by beacons of fire, in case an enemy approacheth to any parte of our Countrey. His bookes were intituled Commentaries of the office of a Generall as *Polybius* saith; & *Ælian* heere calleth them bookes of the office of a Generall, the title being all one in effect. Of these bookes none haue reached to our age, but one alone, which compriseth precepts of defending a towne besieged, & some 5. or 6. years agoe came first to light, & priuie: that worthy man Isaac Casaubon, the learned ornament of his Countrey, (and of England so long, as hee lived there) being the setter forth. And it is adioyned to his edition of *Polybius*. These bookes Tactick of *Æneas* were abridged (as *Ælian* saith) by.

3. Cynas the Thessalian *Plutarch* in the life of *Pyrrhus* telleth vs what Cynas was. There was, saith hee, in the Court of *Pyrrhus* a Thessalian, a man of great vnderstanding: & whose having heard the orator Demosthenes, seemed alone of all, that then were esteemed eloquent, to renewe in the memory of the hearers an image & shadowe of the vehemencie & vigor of his vtterance. *Pyrrhus* held him in his Court, and made vse of him, in sending him in embassages to people and Cities. In which embassages hee confirmed the saieing of Euripides.

What ever force can doe, with trenchant swordes:
The same, or more, is wrought by pleasing wordes.

Therefore was *Pyrrhus* wont to say, that Cynas had gayned more Cities with his eloquence, then himselfe with armes. By occasion whereof he did him

him great honor, & employed him in his principal affaires. *Tully* speaketh of his workes: your letters, (saith he to *Papyrius Pætus*) haue made me a great General: I was altogether ignorant of your so great skill in military matters. I see you haue read the bookes of *Pyrrhus* & *Cynas*, I therefore purpose to follow your counsell: this yet more, to haue some fewe shippes in a readinesse vpō the sea-coast. They say, there is noe better armour against Parthian horsemen. But why sport wee? you knowe not, with what a General you haue to doe. I haue in this my gouernement fully in practise expressed *Xenophons* institution of *Cyrus*: which before I had worne a peece with reading. *Pyrrhus* & *Cynas*, hee nameth, as two principall Authors of warlike discipline: And where he addeth *Xenophon*, whose, though he be not named by *Ælian* amongst the Tactick writers, deserveth yet not to be pretermitted, having been both a great Comaunder, & besides writtē largely of military matters, whose workes also are now extant: let vs see, what he saith of him in another place. *Cyrus*, saith he, is written by *Xenophon*, not according to the truthe of an history, but for a patterne of iust gouernement. Whose wondrous grauity is by that Philosopher matched with singuler Curtesie, which booke our *Africanus*, (and that not without cause) was never wont to let goe out of his handes. And of *Africanus* he reporteth the like in his Tusculan quæstions.

4 *Pyrrhus* the Epriote wrote Tacticks. *Pyrrhus* the K. of *Epirus* was of auncient time esteemed one of the best Generalls, that ever was. What *Anniballs* iudgement was of him *Liuy* reporteth. & *Plutarch* in the life of *Pyrrhus*. And *Antigonus* being de- manded, whom hee thought the greatest generall, then living, answered *Pyrrhus*. And where other Kings imitated Alexander the great in purple appaile in number of gardes about their persons, in carieng the necke a litle awry, & in speaking lowde, hee alone repræsentēd him in exploits of armes, & in deedes of prowes, saith *Plutarch*. *Plutarch* saith likewise: Touching his skill in the arte military howe to order a battaile, and howe to bring his men to fighte with most advantage, a man may draw prooffe sufficient out of the bookes, he wrote; of which bookes *Tully* spake in the last paragraph.

5 And his sonne Alexander. *Pyrrhus* had by his first wife *Antigone* a sonne called *Ptolomey*, by *Lanassa*, another called *Alexander*, & by *Bircanna*, the third named *Helenus*. All which albeit by race & inclination of nature they were Martial, and yet brought he them vp, & from their birth framed & enured to armes. And the report is, when vpon a time one of them, yet a chylde, asked him to which of them he would leaue his kingdome, to him, answered *Pyrrhus*, who shall haue the sharpest swordes: *Iustin* also makes mention of these three sonnes. *Ptolomey* was slaine at *Sparta*, as *Iustin* would haue it. *Plutarch* saith he was slaine in the way betwixt *Sparta* & *Argos*. *Alexander* reigned after his fathers decease in the Realme of *Epirus*. That hee wrote Tacticks, I haue not read, but in *Ælian* onely.

6 And *Evangelus* *Plutarch* discoursing of the studies of *Philopæmen* hath this in effect: He tooke noe delight to heare al kinde of discourses, nor to reade al bookes of Philosophy, but such onely, as might profit to the daylie encrease of vertue; And hee read not willingly other passages of *Homer*, then such, as hee thought had some efficacy to moue a mans hart to prowes. But amongst, and aboute al other readings, he specially affected the Tacticks of *Euangelus*: & like wise the histories of the exploits of *Alexander* the great. This is al I find of the Tacticks of *Evangelus*. I gesse notwithstanding, he was a choice author, because *Philopæmen* had him in such esteeme; of whome the same *Plutarch* writeth: That Greece bore him singuler affection, as the last vertuous man, which shee brought forth

foorth in her ould age, after so many great, and renowned Capitaines of auncient time; and alwayes augmented his power, and authority, as his glory encreased. In which respect a Roman, praising him, called him the last Graecian; meaning that after him Greece bred noe great, nor any personage in deed worthy of her.

7 And Polybius] It is the same Polybius, whose History, so much as is extant, that excellent learned man Isaac Casaubon translated into Latin, and set forth 1609. For his life and worth resort to the preface of the same Casaubon to Polybius his history. Hee had bene in Achaia, his owne country, Generall of the horse. Afterward being in displeasure with the Romans, hee lived long in prison at Rome: and was for his worth finally released by intercession of the greatest men of Rome: and became companion to Scipio Africanus the younger, with whom also he was at the siege and destruction of Carthage. His Tactics, whereof Ælian speaketh, are perished with other of his workes. Yet are there many passages dispersed heer, and there in his history, which argue his extraordinary skill in matters of warre. And it may seeme, that Ælian hath taken much from him both for matter, and wordes.

8 Iphicrates] Who will reade of Iphicrates, let him goe to ^a Æmilius Probus, that writeth his life. His actes are also declared by Xenophon, and Diodorus Siculus, and Polyæn, and Iustin and diuers others, as they were incident to their generall histories. Hee was esteemed one of the best Generalls of his time: and was called out by name by Darius King of Persia to bee generall of the Gracians, his mercenaries, in the warre, hee had against the Egyptians: His fame and estimation was soe great with Alexander the great, that when his sonne (whose name was also Iphicrates) with other Gracians were taken prisoners by him, for that they came embassadours into Persia to Darius, he not onely spared him for the loue of the City of Athens, and for the remembrance of his fathers glory (^b the wordes of Arrian) but held him about him in honour so long, as hee liued, and after his decesse sent his reliques to Athens, there to be interred by his friends, and kinsfolk.

9 Posidonius the Stoick] Posidonius in his time was a Philosopher of high renowne, and of the sect, that were called Stoicks. Tully citeth him often in his workes. In the second booke of Tusculan questions hee recounteth, ^c that Pompey the great, on a time comminge to Rhodes, was desirous to heare him. But vnderstanding hee was extreame sick of the goute, hee forbore not notwithstanding to visit him being a most noble philosopher: whome after hee had seene, and saluted, and vsed with honorable wordes, and told him, hee was sory, hee could not heare him discourse, you may, if you please, quoth Posidonius: and I will not suffer paine to bee cause, that so great a man seeke mee in vaine. Then, as hee lay in his bed, began hee gravely, and copiously, to dispute, that nothing was good, but that, which was honest. And when firebrands, as it were, of torment towched him to the quick amidst his disputation, he broke foorth often into these wordes: *Sorrow, all this is nothing: I thought thou trouble me neuer so much, I will not yet confesse, that thou art of thy selfe euill.* So Tully. ^d Pliny likewise telleth, that Pompey, after the warre of Mithridates, going into the howse of Posidonius, a man famous in Philosophy, forbid his sericant to knock at the doore (as the manner was,) and the sericants bundles of rodde (saith he) were submitted to a doore by him, to whom East & West had submitted themselves.

The same ^e Tully attributeth to this Posidonius the invention of a Sphere, whose particuler conversions did worke the same in sonne & moone, and the other fiue planets, that is wrought by the motion of heauen euery day and night.

^e Cicero. de natura deor. lib. 2. 227.

The preparation of warlike forces and diuision of them, and how they are armed.

CHAP. II.

I will then beginne with such preparations as are absolutely necessary for service in warre, the forces whereof are of two sortes, the one Land forces, the other ship forces. Land forces are such, as fight on land: Ship forces such, as are ordered for fight in shippes vpon Sea, or Rivers. But the order of Sea service I will referre for another place, and intreat now of things pertaining to Land service. The levies then for Land service are either of those, that fight, and manage Armes, or else of those that fight not, but remaine in the campe for necessary uses. They fight that stand ordered in battaile, and with armes [assaile or] repulse the enemy. The rest fight not, as Phisitians, merchants, servants, and other, which follow the campe to minister vnto it. Such as fight, are either footemen, or Riders: footemen properly, that serue on foote. Of Riders, some vse Horses some Elephants. They, that vse Horses, are carye either one Horse-back, or else in Chariotts. And these are the differences in generall. But in speciall the foote, and Horse receaue many other diuisions; onely the Elephants, and Chariotts, neuer varie. Footemen then are reparted into three kindes, one being Armed, another Targettiers, the third light, or naked. ¹ The Armed beare the heaviest furniture of all footemen: vsing according to the Macedonian manner large, round, Targets, and ² longe Pikes: ³ The Light contrarywise beare the lightest, having neither Curace, nor Greue, nor longe, or round Targets of any weight, but ⁴ sliong weapons onelike as ⁵ Arrows, ⁶ Darts, ⁷ Stones either for hand, or sling. To this kind is referred the ⁸ armour of the Argilos, who hath his furniture like to the Macedonian, but something lighter. For hee carieth ⁹ a little flight Torgett, ¹⁰ and his Pike is much shorter, then the Macedonian Pike: which manner of arming seemeth a meane betwixt the light, or naked, and that which is properlie called heauie: as being lighter, then the heauie, and heavier, then the light: and that is the cause, that many place it amongst the light.

The forces of Horse (which wee distinguished before from Chariotts) as being ordered in Troopes, are either ¹¹ Cataphraits, or not Cataphraits. They are Cataphraits, that cover their owne, and their horses bodies all over with armour. Of not Cataphraits, some are Launciers, some Acrobolists. ¹² Launciers are such as joyne with the enemy, and fight hand to hand with the Launce on horseback. Of these, some beare longe Targets, and are therevpon called Targettiers: Other some Launces alone without Targets, who are properlie called ¹³ Launciers, and of some Xestophori. ¹⁴ Acrobolists on horseback are such as fight a far of with sliong weapons. Of these, some vse darts, some bowes. They vse darts, whome wee call ¹⁵ Tarentines. Of Tarentines, there are two sortes: for some throw little ¹⁶ darts a farre of, and are termed Darters on horseback, but properlie Tarentines: others vse light darts, & ¹⁷ after they haue spent one, or two, close presently with the enemy like the Launciers, which

wee

The

The Tackles

wee spake of, and fight hand to hand. These in common speech are named light horsemen. So that of Tarentines some are properly called Tarentines, whose manner is to darte a far of. Some light horsemen, who joyne, and fight hand to hand. ²⁰ The horsemen that vse bowes are termed Archers on Horse-back, and of some Scythians.

These then are the differences of such as are in the Campe, the kinds of Souldiers being in nomber nyne: Of footmen, armed, Targetiers, Light armed, or naked: Of horsemen Lanciers, Darters, Archers, Cataphracts: And lastlie Chariots, and Elephants.

Notes.

IN this Chapter the kindes of Souldiers are distinguished according to their severall armes borne in fight. And therefore of foote some are called armed, because they beare heavy armes; other light armed or naked, because they wear no defensive armes, other some Targetiers, because their chief defence rested in a slight target, wherewith they covered their bodies. The horse also have their appellation, as their armes are. And some are Cataphracts, because themselves & horses were armed compleatly, other Lanciers, for that they used a lance: other some Acrobolists, by reason they fought with flying weapons a farre of. The first thoughts of a Prince, or State, that is resolved to put an army into the field, ought to be to provide armes. Armes are the security of their own souldiers, the terror of the enemy, the assured ordinary means of victory. The antiquity of armes is all one with the beginning of warre. For when of ancient time mighty men puffed up with pride, and led by ambition, sought by violence to enlarge their empire, and to bring under subiection their bordering neighbours, they were enforced to flye to the invention of armes, without which noe victory could be obteyned. Since, armes have been taken up for defence also, necessity, the mother of artes, inventing a means to withstand ambition. As Antalcidas well objected to Agesilaus being wounded by the Thebans; you are well rewarded for your labour, quoth hee, since you would needes teache the Thebans to fight, that had neither will, nor skill so to doe. For the Thebans being put to necessity of defence grewe warlike through many invasions of the Lacedemonians, saith

^a Plutarch, in Agesilaus.
^b Plin. natural. hist. lib. 7. c. 56.

^c Plin. Paral. 1. pag. 57.

Plutarch. Whoe were the inventers of the severall pieces of armour, and of the divers kindes of weapons used in old tyme, may appeare by the relation of ^b Plin in his natural history. This is certeyne, that the most warlike nations, and most victorious have alwayes sought to have advantage of their enemies by advantage of armes. The end of armes is either to defend, or assault. Hence are armes divided into two kindes: Defensive, and Offensive. Defensive are those, which are worne to resist the force, and charge of the enemy. Of this sort are the head-piece, gorget, curace, vambrace, gantlets, tases, greves, and target. For whereas there are eleven partes in man, the woundes of any of which bring with the undoubted death (as some ^c authors write) the braines, the two temples, the throate, the breast, the belly, the two muscles above the two elbows, the other two above the knees, & the privy members pierced with a thrust: the headpiece serveth for the defence of the braines, and temples, the gorget for the throate, the curace for the breast, the vambrace for the muscles of the armes, the tases for the privities & belly, the greves for the muscles above the knees, and the target for further assurance of the whole body, being moveable against all strokes, and proper of the assailants. Offensive armes are such, as men endeavour to wound, or kill withall: as flying weapons of all kindes, arrowes, stones out of slings, or the hand, swordes,

swordes, pikes, partizans, javelines, and the like. ^a But as defence, and security of a mans self is more agreeable to nature, then to hurt an enemy, so are the defensive armes preferred before the offensive, in that they bring safety to him, that beareth them, where as the other are employed in annoying the enemy onely. The Poets sett forth their bravest and valiantest men alwayes best armed for defence. So Achilles in Homer, and Aeneas in Virgil, are armed to point with armes wrought by Vulcan, to the end to remaine unwounded amidst the stormes of their enemies weapons. The Graecian Lawgivers punished that souldier, that in fight cast away his target: not him, that lost his sword or pike. ^b Plutarch writeth, that at such time as Epaminondas assaulted Sparta (the most warlike City of Greece) there was in the City a Spartan named Isadas, who was the sonne of Phœbidas, hee that surpris'd the Castle of Thebes called Cadmea, and thereby stirred up the warre betwixt the Thebans, and Lacedemonians, & ruinated the principality of the Lacedemonians in Greece. This man being in the flower of his age, and personable, and large of lymmes, ranne forth of his house all naked, his body annointed with oyle, without apparell or armes, except a sword in one hand, & a javelin in the other, and breaking through the throng of those, that fought on his side, came to handes with the enemy, and overthrowing some, and killing other some, continued the fight, till the enemy was repul'd, and at last returned into the City without wound. The chief magistrate understanding hereof rewarded him with a Crowne for his valor, but yet fined him at a hundred drachmes, for that he durst veter to fight without armes defensive; iudging it a matter almost impossible, that a naked man should escape with life fighting against the armies of so many valiant enemies, as the Thebans were.

In armes was required, that they should be strong, that they should be fitte, that they should be comely; strong to protect, or annoy, fitte to sette close to the body and be manageable, comely to grace him, that beareth them. That defensive armes ought to be strong, may be shewed by the end of armes; which is to save harmlesse against arrowes, daries, and other offensive armes of the enemy. If they faile of this end, they are of noe use; it being better to be unarmed, then carry armes, that will not defend. Without armes you have the body free, and at liberty: carrying armes, though never so light, they must be a cumber to you, and some what hinder the motion of your body. Armes therefore ought to be sufficient to resist the weapons of the enemy. The inconvenience of defective and weake armes is well noted by Vegetius. ^c From the building of the City of Rome, saith hee, till the time of the Emperour Gratian, the foote armed their bodies with Cataphracts, and head-pieces. But when field exercise through negligence, and sloth was given over, armour began to growe heavy, because it was fieldome put on. They made suite therefore to the Emperour first, that they might leaue of their Cataphracts, then, their headpieces. So our souldiers encountering with the Gothes, were oftentimes wholly defeated and slaine by the multitude of their arrowes. And a litle after: so cometh it to passe, saith he, that they, whoe without armes, are exposed in the battaile to woundes, thinke not so much of fight, as of running away. Yet must wee not imagine, that those souldiers fought in their ordinary apparell onely: I incline rather to the opinion of ^d Stewechius, whoe holdeth, that they tooke themselves to their military coates, called in ^e Notitia vtrâque, Thoracomachi: and to their Targets; This Thoracomachus was a garment invented long before Gratiâns time, and worne under the armours of the souldiers, and was a kind of felt, but being noe profe against arrowes, and their targets not sufficient to cover their heads, and whole bodies from arrowes, they were obnoxious to the shotte of the Gothes, and receyved those overthrowes, Vegetius speaketh of.

B The

The matter whereof strong armes were made, I find to bee divers. Some were forged of Steele: as the armour of Goliath, and the head-piece of K. Saul. For it is not there sette downe, what his curace was of, Notwithstanding it is likely, it was of the same matter, of which his head-piece was made. When I say these armours were of Steele, I follow therein the iudgement of Tremelius and Iunius, whoe so translate it; & with them also agreeeth V. ablus. For the old translation hath, that they were of brasie: I haue not else where read of Steele armour. And it may bee, that the old translation had an eye upon the vse of ancient time, wherein the matter of armes was principally of Brasie. Homer reporteth, that the armour of Diomedes was of brasie: & Pausanias, that all the Heroes (that is the) ancient worthies about the time of the siege of Troy) had their armour of Brasie. Alcous the Poet in describing his armour saith, the rest of his armes were of brasie, as his head-pieces, his greaves, his Targets, only his Curaces were of linnen. Pausanias reporteth also, so that the sword of Memnon was of brasie, & the head of the speare of Achilles, & Pisan- ders axe, & the head of Meriones his shafte. Servius Tullius in seeing the City of Rome, appointed the chiefest & richest Citizens to arme themselves with head-pieces, greaves, Cu- race, & buckler of brasie. The Targets of the Lacedemonians were of brasie also by the in- stitucion of Lyncurgus. So that brasie was much used in armes in the oldest times. And where Alcous speaketh of his linnen Curace, I find that Curaces of linnen were in request also evē in those times. Homer affirmeth that Ajax Oileus had a linnen Curace. But afterward I- phicrates the Athenian held them so good, that he gave them to his souldiers to weare, in- steede of their usuall armes made of iron, & brasie. And Xenophon armeth Abradates the K. of Suse with a linnen armour, adding that it was the manner of that Countrey. And Plu- tarch saith, that Alex. the great, after he had gotten the victory against Darius in Cilicia, found amongst the spoile a linnen armour, which he afterward used in the battailes he fought. Patricius is so confident in the strength of a linnen armour of his owne device, that he doub- teth not to preferre it before well tempered iron. What his invention is, he keepeth to him- self, for feare the Turk should haue intelligence of it, & so Christianity bee driven to an ex- treme. Al men knowe, that the temper of an iron armour may be such, as wil resist the violence of a musket shotte, and that at a neere distance. Neither is this temper the invention of our dayes. The like hath been of ancient time. Plutarch writeth, that Demetrius besieging Rhodes, was presented with two iron armours brought out of Cyprus, either of the weight of 40. pounds. The maker of them, whose name was Zolus, desirous to shewe their strength, & firmenesse, caused one to be set up at the distance of 26. paces, and bee shotte at with an arrowe discharged out of a Catapult. The armour hitte remayned unpierced, nothing appea- ring vpon it, but the raising, as it were, of a pekenife. And that a Catapult is of more violence, the musket, the effect thereof declared in history make plaine. Whether a linnen coat be of that resistance, or not, hath not been yet tried. Nay the contrary hath been tried. For Alexander at a siege of a City of the Mallians (as I take it) was sore wounded with an Indian arrowe through an armour of linnen. Whose armour I would iudge to haue bene not of the stende- rest, and weakest, but of the surest kinde. Yet is it not to bee passed over that Iulius Lip- sius alleageth out of Nicetas Choniates concerning a linnen armour of Conradus of Mon- ferrate: Conradus, saith hee, fought then with out a target, and in steede of a Curace hee had on a woven weed made of flaxe, soaked in fowre wine, well salted, and often-folded. It was so sure against outward force of strokes, being filled with wine, and salt, that it could not bee pier- ced with iron or Steele. This invention our age hath not bene acquainted with; whether it bee the same, that Patricius aimeth at, let experience iudge. That anti- quity practised in wooll, Pliny witnesseth, who writing of wooll and woollen garments saith: Of wooll wrought and pressed together by it selfe alone

alone (I think as our hatters worke felt) a garment is made; & if you worke it with vineger, it cannot bee strooke through with a sword. This wooll so wrought, he calleth coactum: which in Cesar, as I take it, is called Subcoactum. Cafars wordes found thus: Pompey, although hee had noe purpose to hinder Cafars workes with his whole army; nor yet to hazard battaile, sent notwith- standing archers and flingers, of whome hee had great store, to convenient places; and by them many of our souldiers were wounded; & a generall feare of arrowes fell vpon them; and well nigh our whole campe made themselues coates and cases of either felts (subcoactis) or quilts, or leather, thereby to avoide the daunger of sheng weapons. But wee will leaue Patricius to his fancy, and adde an example out of Xenophon of armes used by the Chalybes, a nation inhabi- ting the Chaldean Mountaines. The Chalybes, saith hee, were the most vali- ant nation, that the Gracians passed through, & such as durst come to handes with them. They used linnen Curaces reaching downe to their bellies, and in steede of winges, they had roapes thick woond, and fastened together. The strength of roapes thick woond together must, noe question; bee great. Cesar confirmeth it. Amongst other defences, which his souldiers devised for assurance of a Turret against the Engines of the Marsilians, hee saith: They made foure sto- ries of Cables fitting the length of the walles of the Turret, and foure foote broad, and fastened them hanging downward to the beames sticking out of the Turret on those three parts, which lay toward the enemy; which kinde of covering alone, they ad in other places made triall, could bee forced or strooken through by noe missive weapon, or Engine whatsoever. Thus, I haue heard, was the device of the Spaniards in 88. to defend their ships against the fury of our artillery. Whereof I may inferre, that if Cables combined together bee of such assurance against Engines, roapes thick layde and fastened together must bee a strong defence against a sword. To end with the matter, whereof armes were made, I finde likewise, that the Macrones used, in steede of Curaces, coates made of haire. And thus much of the matter of Armes.

Besides, armes should be fitt for the body, and for the strength of him, that beares them. When David was to fight against Goliath, K. Saul, seeing him without armour, caused his owne head-piece & curace to be put upon him. David assayed to marche, but finding these armes to heavy, was faine to leaue them, and to goe against Goliath unarmed. Saul was the tallest man of his nation, David but meane of stature, & to put armour propor- tioned to a large body vpon him, that is a great way lesse of members is as much, as to deliver him bound to his enemy. Xenophon amongst other causes, why the Lacedemonian horse were beaten by the Thebans at the Leuctrian battaile, alleageth this for a maine cause: That the richest men kept & furnished out horses, & as often as musters were takē, the man, that was to serue, shewed himself, & answered to his name, & receiving horse & armes, such as were given him, was so led against the ene- my. They were beaten, saith Xenophon, receiving horse & armes at al adventure, not know- ing, whether they were fitt for service, or not. Whether armes be to bigge or to litle, they hurt a like. To litle, they pinche the bearer, & make him not able to endure labour; be- cause he is in paine: To great, by their slap and loose hanging about the body, they hinder the motion of those partes, that are to be employed in fight. Being fite they differ litle from ordi- nary appareile, except it be in weight: which inconvenience is easily remedied by vse, and practise. Tully writeth of the Roman souldier, that his continuall vse of armes was such, that hee noe more reconed his target, sword, head-piece, & other armes to bee burdensome vnto him, the his shoulders, armes, & hads; & said that armes were

part of a souldiers body, being so fitly made & borne, that need requiring, they could throw down their burdens, & vse their ready armes in fight, as the members of their bodies. Yet must care be had, that their weight exceed not the strength of him, that beareth them. For whoe will be able to continew long in fight, that beside the labour of fight, is charged with a burden more, then he can well beare. The prooffe is plain in beasts, which how strong soever they be, faint & tire vnder to much weight. ^a *Alian* after speaking of the length of pikes, giueth this rule, that they bee noe longer then a man may well vse, & wield in handling. To much length maketh them to heauy, & vnfit to be managed; wherby they rest vnprofitable to offend the enemy. In this property of fittnesse those armes & weapons are comprehended, which are of most vse in the field. For as in all other artes thinges of greatest effect are alwayes preferred, so is it in warr. There is great advantage in armes, which is the cause that one kinde hath been preferred before an other. *Amilius Probus* giueth a notable testimony of skill in matters of warre to *Iphicrates*, of whom he writeth thus: ^b *Iphicrates* the Athenian invented many things in warr. Hee chaunged the armes of the foote: For whereas before they vied great targets, short pikes, & litle swordes, he gaue them litle round targets, called *Pelte*, that they might be fitter for motions, & encounters, and doubled the fise of their pikes, & made their swordes longer. Hee likewise chaunged their Curaces, & in stede of iron, & brasse, brought in other wrought of linen, wherby he made them nimbler at all assayes. For lessening the weight, hee brought to passe, that they as much covered the body, and yet were very light, and fitte for vse. Of these targets, which *Iphicrates* invented, the names of *Peltari* (Targets) sprong: of whom wee shall heare more in this chapter. And yet wee must not hereof conclude that *Iphicrates* chaunged all the armed foote into Targets; for the Athenians had still their armed, notwithstanding this inuention of Targets, as ^c *Xenophon* testifieth; but where as the Athenians before had noe targets of their owne people, (as I coniecture) *Iphicrates* brought in this kind of armour: and so of the armed, hee made some targets, & left the rest to the armes, they bore before: iudging it more profitable to haue both Targets, & Armed of their owne people, then armed alone. ^d *Philomen* also the braue Achaean Generall taught his Countrey-men in stede of longe targets & Targetes to take a round target (called *Alpis*) & a pike after the Macedonian manner, and to arme themselves with head-pieces, Curaces, & greues; and so fettle themselves to a staid, and firme kind of fight, in lieu of concursory, and pelisticall encounters, and by this meanes brought the to be valiant, & braue souldiers, & victorious in their fights against their enemies. ^e *Polyb.* discoursing of the Gaulois & Spanish swordes of aunciet time, saith, that the Gauls sword was so fashioned, that it serued onely to strike with, and but for one stroke: after which it so bowed both in length & breadth, that vnlesse the point were rested vpon the ground, & the blade rightened, you could not strike with it the second time. But the Spanish sword was both for thrust & stroke, having a strong point, & a stiffe & sure edge to strikewithal on either side by reason of the firmnesse of the blade. This difference the Romans espied, and being excellent imitators of all thinges, which were best for vse (though they were enemies from whom they tooke them,) made choice of the Spanish swordes, & after *Annibals* time caused their foote to vse noe other. ^f *Suidas* witnesseth it: The Spaniards, saith he, in forme of swordes farre excell all other nations. For their swordes both haue a strong point, and an edge on either side, that entrench deep in striking. Which caused the Romans, to lay down their owne countrey swordes, and take the Spanish forme from them, that followed *Anniball*. The forme they took, but the goodnesse of the metall, & exactnesse of the temper they

they could never attaine vnto. The Romans then reiected the french swordes, as of small vse, & imitated the Spanish, because they were fitt for service. *Xenophon* describing the nations, which followed *Crasus* against *Cyrus*, their manner of arming, and order in battaile, telleth of the Egyptians, that they were armed with targets reaching downe to their footes, with long pikes, & with swordes, which they call *Copides*, & for order, stood a hundred in depth, & bringeth in *Cyrus* deriding this manner of arming, and order, to his souldiers, saying they were a like armed, a like embattuled. For their targets, said he, are greater then is fite for action, & for fight, & being ranged a hundred deep, it is manifest, they will hinder one another in fight, except a few. ^a *Anniball*, after his first victory against the Romans, armed his Africans (his best & most trusty souldiers) with the armour of the same Romans; because he found it better, then his owne. & *Pyrrius* used not onely the armour, but the Italian souldiers also: & ranged them a cohort & a Merarchy, after vntinely one by another. ^b *Mithridates* after his experience in his first warrs with the Romans, that as well in arming, as in manner of fight, they excelled all other nations, left the arming of his owne Countrey, & brought in the Roman sword, & target, & reduced all as nere, as hee could vnto their discipline. So then strength & fittnesse are required in armes. To them is comelincesse adioyned. The shield of *Achilles* how was it bewtified with pictures & Stories by *Vulcan*: and that of *Æneas*, coming out of the same forge, how glorious was it: To say nothing of the braue armes of *Hector*, *Agamemnon*, *Dromedes*, *Glancus*, *Turmus*, *Mezentius*, & other. ^c *Alexanders* armes were very rich. He had a Sicilian Cassock gyrded vpon a double linen Curace the spoile of *Iffos*: his headpiece was of iron lining like pure silver, the work of *Theophilus*; about his necke was an iron gorget besetted with precious stones. A sword hee had of wonderful temper & lightnesse, the gift of the Cician King. Hee wore a baudricke of prowder worke, then the rest of his armour, the work of the elder *Elion*, & the honour of the Rhodian City. ^d And *Cyrus* the elder, that liued before *Alex.* time, had armes provided by his Grandfather *Astyages* both very faire, & fitt for his body. ^e *Abadates* the *Susian* king had his headpiece of gold, & vambraces, and bracelets about his wrists, & a purple Coate, and a plume of hyacinthine feathers. Neither did this bravery rest emongest the Princes alone. The souldiers of *Cyrus* were furnished with the same armes, that *Cyrus* himselfe bore, with scarlet coates, Curaces of brasse, brasse helmets, white plumes, swordes, & euery one a darte. They differed onely in this that their armes were guilded, *Cyrus* his armes shined, & had a reflexion, as it were, a looking glasse. And ^f *Alexan.* hearing of the riche armour, the Indians bore, to make his owne souldiers equall with the in bravery, whom they exceeded in valor, caused their targets to be plated over with silver (whereof they were after called *Argraspides*) & their horse-bittes to be made of gold, & adorned their Curaces, some with silver, other with gold. ^g This might seeme pompe & superfluity in a yong King, were it not that the like was done by other the greatest Generals of aunciet times. ^h *Cesar* may serue for an example for al, whose souldiers how gallant and braue they were, *Plut.* testifieth in his life. The Romans otherwise much addicted to frugality, allowed yet liberally ornaments to the honouring of worthy souldiers, rewarding them for their service, with rich trappings for horses, chaines of gold, bracelets, crownes of gold & other honors: which they wore not onely in the field, but at al other solemnities & meetings in the City. And for every common souldier they provided plumes of purple, or blacke feathers, euery one of a cubit long. Of which plumes *Polyb.* giueth this iudgement: Plumes, saith hee, being added to the rest of the armour maketh a souldier seeme twice as great, as hee is; and beside the faire shewe, they make, they are terrible to the enemy in fight. A man may seeme as light, as a feather, that discourseth of plumes, & fetcheth ornament from feathers.

Yet may I truly affirme, that the use of plumes is very auncient, & that the Romans borrowed it from the Gracians, and the Gracians from the Carians, who were the first inventors of them. As much is testified by Polyenus: He saith that Temenches K. of Egypt going to the oracle of Ammon about the state of his kingdome, had answer to beware & take heed of Cocks. P. Sammetichus, that sought the kingdome, had P. Egretes a Carian to one of his familiar friends: & learning of him, that the Carians were the first that invented Plumes to their helmets, & evē then continued the use of them, & conjecturing that the meaning of the Oracle was not of Cocks, but of men, that wearing some ornament on their heads, had a resemblance of Cocks, waged a multitude of Carians against Temenches, by whose help he overthrew Temenches in battaile, & possessed himself of the crown of Egypt. Now for the true end of souldiers ornaments I wil onely adde one example. Philopamen the Achaean in reforming the abuses crept into the Achaean State with great iudgement (I will use the wordes of Plutarch,) reduced to order their delicacies & superfluities. It was not possible quite to take away the sicknesse of vain & idle desires, wherewith they had of long time been possessed, delighting in excessse of appaile, in riche dyes of coverlets, & carpets, striving one with another, who should be most sumptuous in bankets & featings. But by little & little beginning to turne their thoughts from vnnecessary expences to a loue of comeliness in thinges, that were profitable & honest, he brought them at last to leaue the expences of the body, & to shew themselves gallant, & braue, in soldierly, & warlike furniture. A mā might therefore haue seene the shoppes full of silver and golden cuppes cutte a peeces, of curaces gilded with gold, of silvered targets, and bittes; the places of exercise fraught with colts then first backed for service, & with yong gallants managing their armes; & in the handes of women head-pieces adorned with divers-coloured trymmings, horlemens coates, and souldiers cloakes curiously embellished with flowers. For the very sight of these things both encreaseth spirit, & stirreth vp desire, & engendreth an vndaunted boldnesse, and alacrity to daungers. In other shewes to much lavishing bringeth in effeminate nesse, & worketh a remissenesse of minde, the fence with vaine pleatings and ticklings subverting, as it were, the vigor and force of the vnderstanding. But in these the Spirits are much heighthened, and exalted. As Homer bringeth in Achilles at the very sight of his newe armour ravished and inflamed with a desire to bee doing with it. Thus garnishing the youth hee exercised & hardened them to labour and warlike motions, making them thereby to vndergoe with desire whatsoever they were commaunded. So farre Plutarch. Out of whose opinion it followeth, that Bravery of armes raiseth the spirits, stirreth up desire to fight, maketh the souldier bold, and cherefull to perills, and as Polybius holdeth please the sight, encreaseth stature in shewe, and is a terror to the enemy. Yet ought there therein a meane to be sought, & rather an assurance followed, then vaine gazing and ostentation. Antiochus being to fight with the Romans gathered a mighty army together. And seeing them glitter with gold and silver, and with all excessse of bravery, as the manner of the Asiaticall people was, tooke so great delight therein himself, that calling Anniball vnto him, hee shewed his troopes, and demanded, if hee thought not that Army sufficient for the Romans: yes quoth Anniball, though they were the most covetous people in the world. Anniball with good reason derided the vaine shewe fitter for a mask, then a field, which hee assured himselfe, would fall into the Romans handes to bee spoiled. Mithridates committed the like error in his first warre against the Romans. For, as Sophisters are wont for the most parte, saith Plutarch, hee was in the beginning vaine glorious, and conceited by prowde warring against the Romans with weake forces, but yet sette out with pompe, and bravery

Lucilla.

bravery to the outward view: But being foiled to his shame, and weighing in his minde, he must take vp second armes against them, he sought to reduce his forces to a true kinde of arming, & fitte for the service, he intended. Reiecting therefore multitudes, and confased threatnings of barbarians, and furnitures of armes gilded, and sette with precious stones, as being a pray for the conqueror, and noe assurance for him, that wears them, hee brought in the Roman sword, and caused long heavy targets to bee framed, and chose horses, rather that were already managed, and made fitte for service, then those, that were richly trapped and garnished. So farre Plutarch. The souldiers care therefore ought to bee first for surenesse, then for finesse, lastly for comeliness and ornament in armes. If the two first fail, the last availeth little, and will proue rather a burden, then a defence. And thus much of armes in generall: Nowe followe the particulars of armes, as they are in Aelian.

I Preparacions absolutely necessary for warre] The preparacions, whereof Aelian speaketh, are so necessary, that without them noe warre can be made or continued. For purposing to fight by water you must haue shippes, by land, you must haue foote, and horse. For which, if you provide noe armes, you put them into the field not to fight, but to bee slaughtered. The manner of fight in the field is not of one sort. Some time celerity is needfull, to attempt or prevent the enemy: sometime a slowe and sure proceeding, lest, with too much hast, wee be overtaken our selues. Therefore the divers arming of souldiers, ought to be such, that they may serue for all occasions, and uses, and that wee may employ alwayes to service such, as by reason of their armour, shall most fitte our purpose. Wherefore Iphicrates fittingly resemblance an army to a mans body: calling the heavy-armed the body, the light-armed the hands, the horse the feete, and the Generall the head: and as, if any of the rest were wanting, the army should bee lame, and halted, so if there want a Generall, it is unprofitable, and of noe use. The heavy armed are the body, which giue life and foode, as it were, to the rest: and to which the rest being distressed, retire. The light-armed are the hands, which vpon euery occasion being put out to grypte and take hold upon the enemy, are drawn in againe, when it is expedient. The horse, as feet, moue with celerity: the Generall is the head: that ruleth, that marcheth, that careth for the rest, directeth the times of their motion, and of their rest. So then the whole force of the field consisteth of horse, and foote. And the foote are reported into three kindes.

I Armed, Targetiers and light-armed] These severall kindes of souldiers were used by all the Gracians, especially by the Athenians, Lacedaemonians, and Thebans, who were the mightiest, and the most warlike people of Greece. Alexander had them in his army against Darius. When Alexander, saith Arrian, came to the place, where Cyrus (with whom Xenophon was) encamped, and sawe the streights of Cilicia possessed with a strong garrd, hee left Parmenio with the heavy-armed, to stay behind, himselfe about the first watch taking with him the Hypaspistes, archiers, and Agrians, marched on toward the streights in the night. The armed were left with Parmenio, himselfe tooke with him the Hypaspistes (targetiers) archiers, and Agrians: These Agrians were darters on foote. The like is to be found in diuers other places of Arrian. Pyrrhus also, that followed the Macedonian manner in arming his souldiers, had the same division of armes. And Philip King of Macedony sonne of Demetrius. And Antiochus, that warred against the Romans.

2 The armed beare the heaviest furniture] This heavy furniture appeareth not by description of the armes, which Aelian giueth them: which are a Macedonian target,

target, and a pike onely. * Iphicrates, besides the target (lesse, then the Macedonian target) which he armed his Targetier with ball, gave him both a pike & a linen curace: So that if the Macedonian armed bore noe more then a Target and a pike, his armes should be lighter, then Iphicrates his Targetier, who had a target, a pike, & a linen Curace. It hath been the manner of some Nations to beare targets alone without Curaces. So did the Egyptians in * Xenophon: So the Gauls in * Pausanias. There are againe, that have borne Curaces without Targets: as Phorcys the Phrygian in Homer: of which kinde of Curace, because it some what resembleth the Curaces of our time, I will reherse the description out of * Pausanias. There lay vpon the aulter, saith hee, a brasse Curace, the forme whereof agreeth not with the vse of our times, but of old it was common. It had two plates of brasse, one fitte for the brest and the belly, the other to cover the backe. That before, was called *gyalon* (the hollow part) that behynd *Prosegon* (because it was added to the other.) They were fastened together with buttions behinde. It seemeth to bee a sufficient defence for a mans body without a Target. Therefore Homer maketh Phorcys the Phrygian to fight without a target, because he wore such a Curace. But yet, that it was not the manner of the Macedonian armed to beare pike & target alone, may be plaine many wayes. First * Polygen giueth them headpieces, & greues, and targets, and pikes. Then doubt I not but they were as well armed as the rest of the Gracians, within whose Panoplia Curaces were comprehend: as * S. Paule testifieth rekonig as parcels of the Panoplia, a Curace, a target, & a headpiece. Now that the Macedonians had also their Panoplia full or compleate arming is to be found in * Diod. Siculus. Where also Choragus the Macedonian (whom * Curtius calleth Horatas) is said in the fight betwixt him & Dioxippus to be fully armed. * Leo describeth the Panoplia of the Macedonians after this manner. Alexander, saith hee, armed his Macedonians with a large target, a sword, a head-piece, greues, vambraces, and a long pike. Philopamen (as is before reher(sed) reducing his Achaeans to the Macedonian arming, bringeth them to Curaces, headpieces & greues. The names also, that are attributed to the Armed, shew they were otherwise armed. * Plutarch calleth them *Pepragmenos*, & *Cataphractus* as having their bodies all armed & opposeth them to *Euzoni* light or naked. And by * Vegetius, the armour it self is named *Cataphracta*, because the whole body is covered therewith. * Xenophon termeth them *Thoracophoros* bearing Curaces. These are the strength of the battaile, and a strong wall, or rather a fortresse of the field, to whom the light-armed, and the horse also retire in time of need. As long as they stand the field is not lost; being defeated the rest can make noe resistance. Being armed with a single target without other armes, they incur the same danger, that the Romans in Gracians time did, whoe for want of Curaces were entirely destroyed with the arrowes of the Cothes. Wherefore, it seemeth, * Alian heer pointeth at the principall armes onely of the armed Macedonian. For after ward discoursing of the light-armed, he saith, they neither had Curace, nor greue, nor long or round target: implieng thereby, that the armed had them all. So * Livy, comparing the armes of the Romans and Macedonians together, saith noe more, then, that the Macedonians were armed with a round target and a pike, the Romans with a long target, and a dart, called *Pilum*; when himself had before declared, they had headpieces, Curaces, and greues.

3 Vling targets after the Macedonian manner] Targets were of two sortes, round targets, and long targets. Long targets were called *Thureo*, and were in forme like a doore, from whence they had their name. For *Thura* signifeth a doore. These the Romans, and Gauls vsed, albeit some what different in forme. The round had eight full handfulls in diameter, as * Alian saith, and were termed *Asides*. Long targets were much disliked by the Gracians. Cyrus in Xenophon derideth them,

as both hindering the sight, & being unwieldy: * and Philopamen changed them into round targets following the Macedonian manner. The targets of Philopamen * Pausanias termeth Argelican targets: It may be because they were first vsed by the Argives in the battaile betwixt * Acrisius Danaes father, and Prains, who contended about the kingdom of Argos.

Of what matter these targets were, is a question. Some take them to have been made of other matter, & covered over with brasse: & that otherwise the souldier should not have been able to haue borne them for the weight. I deny not, that in ancient times some targets were plated with brasse: the rather, because I find, that Alexander to match the Indian pompe covered the targets of his souldiers with plates of silver. But, that the ordinary Macedonian target was so covered, I deny. * Alian after calleth them chalice (brasse) not epichalce (covered with brasse). * Polyb. saith, that the Macedonians in the time of K. Philip the sonne of Demetrius were called Chalcaspides (Brasse targetiers) not epichalkitai, by which name, as Helyebius hath, they were called, that had their targets covered with brasse. So like wise in the time of Persens. And the Megapolians, whoe imitated the Macedonian manner of arming, are termed Chalcaspides in Polybins: I haue shewd, that the Lacedemonians had brasse targets by the institution of Lycurgus: & that, in the time of the Heroes almost all armour was made of brasse. The targets of the Lacedemonians that were stine at the battaile of Leuctra were brasse, and to bee scene in the time of Pausanias: and the brasse target of Pyrrhus, which he left at Argos, being there slaine, was kept in the temple of Ceres. As for the weight, it is not so great but it may become light enough by vse, and exercis. Wee see iron targets in vse at this day, and not hard to be borne. And albeit the weight bee not for euery mans strength, yet since it hath bene, and is, the manner to make choice of souldiers, and to fitt them with armes according to the ability of their bodies, I see noe reason, but the stronger sort might well bear them. Another sort of targets there was which differed from the Macedonian not so much in forme of roundnesse, as in matter, and manner of carueng. They were made of wicker, and borne in the left hand as our bucklers, which wee vsed not long since, and some covered over with hides, some not. * Xenophon saith, that Cyrus the elder armed the Persians with these wicker targets: & rekonig up the nations, through whose Countreies the Gracians passed in their retourne out of Persia, & describing their armes, reporteth that the Chalybes, Tauchi, & Phasians had targets of this kinde. Now, that they were borne in the left hand, is clear by the same Xenoph. * Hec writeth thus of the fight betwixt Cyrus & Crasus: The Egyptians & Persians encountering together, the fight was hard, & sharpe: & the Egyptians aswell in number as in armes, had the advantage. For they fought with stiffe, long pikes, & theire large targets better covered their bodies, then Curaces, or wicker targets, and being borne on their shoulders availed to joint thrusting forward. Seeing therefore their targets close, they advanced, & ranne on. The Persians were not able to endure the shock, by reason they bore their wicker targets at the armes end, but retiring by litle, & litle, & giving, & taking blowes, they maintained the fight till they came to the Engins. So farre Xenophon. Out of which words a man may plainly understand the manner of bearing these wicker targets, which by reason of lightnesse might easily bee held out at armes end. And as the Egyptian target, which reached downe to the foote, must needs bee heavy, and therefore had need of the shoulder to support it, so was it with the brasse targets of the Macedonians, which were also weighty, by reason of the matter, they were made of. These therefore were like wise carried on the shoulder. Plutarch witnesseth it in the life of Amilius. And the same Plutarch rehearseth that Cleomenes the King of Sparta taught his Lacedemonians, in steede of a speare, to vse a pike with both handes, and to beare their targets

targets upon the strappe not by the handle. The wordes are obscure, & need light, which I will give as shortly as I can. I find three wordes amongst the Grecians, all pertaining to a target. They are those Telamon, ochane, or ochanon, and porpax. Telamon in this sense (for it signifieth otherwise a band) is by all confessed to bee the broad strappe, which is fastened to the handle of the target, & boldeth the target being cast about the necke, unto the back Of Ochane, & porpax is some variance. ^a Suidas saith that Ochanon is ^b *ὀχάνων*. The hold of the target ^b Hefychius calleth is the Porpax of the target, & the band, ^c Of Porpax Hefychius saith it is the handle of the target, & Porpax is the same sence, making it the thing bearing vp the targett into which the hand and arme to the elbow is thrust. ^d Suidas saith, Porpax is it, that they hold the target by; which is called ochanes: & againe, that some take it for the band of the target; other some for the middle iron that goeth through the target, on which the souldier taketh hold. So that both Hefychius, & Suidas agree, that Ochanon & Porpax are sometime alone, and signify the handle of the Target. In which sence ^e Herodotus & ^f Pausanias take Ochanon also. Hefychius further interpreteth it for the band of the target (^g *ὀχάνων*) which signification better agreeeth with the meaning of Plutarch, who maketh an apparant difference betwixt the, reporting that Cleomenes taught the Lacedemonians to carry their targets, by the Ochane, not by the Porpax. When he saith by the Ochane, hee meaneth by the strappe, by which being fastened about the necke, the target is throwne over to the back, & resteth upon the left shoulder. That, which I say, will better appeare, if we marke, what the Lacedemonians did before, & what Cleomenes advi-
 feth them unto. Before they caried a speare in the right hand, and a target by the handle in the left, so that both their hands were full. The speare was not able to match the enemies pike (for Cleomenes had often to doe with the Macedonians & Achaeus, whose both used pikes) & pikes, the Lacedemonians could not wield, with one hand; So then, to give them liberty of both hands, he counselled the to carry their targets at their backs by the strappe or Ochane (which was the Macedonian manner) and not to hold them any more by the Porpax or handle, and so to free their left hand, to apply both to the menaging of a pike. This I take to be the direct meaning of Plutarch: Cleomenes then perswaded them to leaue their speares, & take pikes. And lest the target in the left hand might proue an impediment to the use of a pike, hee thought best they should carry them at their backs by the Ochane. To carry them then by the strappe at the backe is to give free use to the left hand, without which a pike, specially a long pike, such as Cleomenes adviſed them unto, cannot be wielded: as experience will teache any man, that list to make triall.

4. And long pikes. Pikes for the most parte have beene called by two names by the Grecians; Doru, and Sarissa. ^a Alian nameth them Dorata both here, and in other places of this book. ^b Xenophon, speaking of the weapons of the Chalybes, saith they had Dorata of 15. cubits long; armed with iron at one end onely. Tet is Doru taken for a speare oftentimes, as in that place of Plutarch last recited where Cleomenes perswaded the Lacedemonians to chaunge their Dorata (speares) into Sarissas (pikes.) The like reckoneth hee of ^c Philopamen, who chaunged the speares of the Achaeus into pikes, calling the speares, Dorata, the pikes, Sarissas. And even in this place Alian termeth them not Dorata simply, but with addition of Perimekestera, of a long sise. And after describing the armes of the Pelastres hee saith their speares (Dorata) were much shorter then the pikes (Sarissas) of the armed. Properly the pike of the Macedonian is termed Sarissa; if sometime Doru, some other word is added to avoide the ordinary signification of Doru; as Doru macron ^d in Xenophon, Doru perimekes in Alian. Tet deny I not, but it may bee called Doru of the matter. For Doru signifieth wood of any kinde: and

by consequent the wood, a pike is made of. But, as I said, the Macedonian pike is properly called Sarissa. What the length of this pike was, Alian will shewe in the 14. Chapter. And for the wood it was made of, I take it to have beene Corneil. For I find that the Macedonian horsemans staffe was of that wood. ^a Arrian confirmeth it, sauing: And now the Macedonians had the better both by reason of the strength of their bodies, and experience in warre, and also because they fought with Corneil launces against Iavelins. For I assent not to the translat-
 of Arrian whose turneth Xystois Crancinois into Corneil darts, where it should be Corneil launces. For in that place Alexander is reported to have fought with a lance, and to have broken it in fight, and to have asked another of Arces, one of the Quiries of his stable, whose had also broke his, and fought with the truncheon, and to have taken the lance of Divarates the Corinthian, and returned presently to the fight, and therewith overthrowne Mithridates the sonne in lawe of Darius. Besides it is said, that the Macedonians had the advantage in weapons; Take it thus, that they fought with darts against Iavelins; what advantage had they: especially being come to the shock: Darts are used a farr off. At hand noe man fighteth with them, unlesse hee have noe other weapon. I thinke noe man will deny, but that a Iavelin in closing is more advantageous then a dart. And that Xyston signifieth a lance, Alian himselfe testifieth in this Chapter calling the launciers Doratophori, or Xystophori. The Macedonian then had his horsemans staffe of Corneil. Whi-
 his lance: a man may probably coniecture, his pike also, which exceeded the lance in length and thickeſſe onely. Wee at this day preferre the Ashe before all woodes for toughnesse; lightnesse and beautie; especially if the vaine runne through to the end. Notwithstanding I finde in ^c Cicuta a knight of Venice, an old souldier, and one that followed the Emperour Charles the fift in his warres of Africk, that the opinion of his time enclined rather to Firre, both for lightnesse, and strength. I have not scene the experience: therefore leaue I the iudgement to triall. Wee have then out of Alian that the armed, had both target and pike, that one man should at one time use both target, and pike in fight, against the enemy will seeme incredible in our dayes. Tet used the Macedonian souldiers both; at one instant they both charged their pikes, and covered themselves with their targets against the flying weapons of the enemy. The manner was this: when they closed with the enemy, they charged their pikes with both hands, and with a slight wryng of the body, and lifting up the right shoulder, whirled their target, hanging at their backe, upon the left shoulder, that stood next the enemy in the charge: and so covered all their body to the middle, and beneath. I have touched it in the practise of Cleomenes. It appeareth more plainly in Plutarch, describing the battaile betwixt K. Perseus, and the Consul Emilius. Hee hath this: ^d The enemy approaching Emilius issued out of his Campe, and fownd the legionary Macedonians, bearing now the heades of their pikes stiffe vpon the targets of the Romans, not suffering them to come vp to the sword: which when hee sawe, and sawe with all the other Macedonians casting about their targets from behinde their shoulders, and receiving the Roman targetiers with their pikes abased together at one signal, and likewise the firmenesse of the battaile shutte vp, & ferred, & the roughnesse of the front (the pikes lying out before) he became affonied, & affrighted, as having never before beheld so fearefull a sight, Which passion, & spectacle, hee afterward oftentimes recounted to his famillier friends. This ioyning of targets in the front is called Synaspismos: whereof wee shall have occasion to speake heere after.

5 The light.] They had divers names given them in the Greek history. Some times they are called Euzoni, because they so girded up their apparell about the, that they were light and fit for motion: Sometimes Askeuoi, because they beare no military furniture of defence: Sometimes Elaphroi because they resemble (as some think) a hart in lightnesse, and swiftnesse: Sometimes Gynnetæ (naked) because they were without defensius armes: Sometimes Pylloi (naked or light) as they are beere termed by Alian, and by Appian, and the other, that I cited.

6 Flying weapons onely.] The light-armed are divided into three kindes, Archers, Darters, and Slingers. Which three kindes were of much use amongst the Gracians, and they beare onely flying weapons. Xenophon testifieth that Cyrus the elder had them: And the Gracians in their returne out of Persia: Alexander had them in his warre against Darius: and Pyrrhus in his warre in Italy, Sicill and Greece: The Gracians against Brennus King of the Gaules: Both the Athenians, & Thebans at the battaile of Delos.

7 Arrowes.] Archers have alwayes bene of speciall esteeme for the field, and preferred before the other kindes of light-armed. Many nations have bene commended for their skill in shooting. Emongest the Gracians the Cretans were (of auncient time) sole archers, as Pausanias witnesseth. Yet was not their service equall with the service of the Persians. For Xenophon confesseth, that the Persian bowe overreached the Cretan a great way: and that the Rhodians with their sling ow-throw the Cretan bow. Of the Carduchians a people, through whose Countrey the Gracians passed at their returne out of Persia Xenophon writeth thus: They caried noe other armes, then bowes and slinges. They were excellent archers; and had bowes well nigh three cubits long; arrowes more, then two Cubits. When they shotte, they drew the string, applieng their hand some what toward the neither end of the bowe, setting their left foote forward. With their arrowes they pierced both targets, and Curates. The Gracians putting thonges to the midst of their arrowes sent them back at the enemy in steede of Dartes. The same in effect is reported by Diodorus Siculus. Of the Parthian horsemen, Appian saith: When Crassus commaunded the light-armed to disband, & goe to the charge, they went not farre, but meeting with many arrowes, and being sore galled with them, they retired streight, and hid themselves emongest the armed, and gaue beginning of disorder, and feare, representing to the sight of the rest, the force, and violence of the shotte, that rent all armes, they fell vpon, and made way aswell thorough bodies, that had the best, as the worst furniture defensiu: giving mighty and violent strokes from stiffe and great bowes, and forcing out the arrowe boisterously with the compasse, and bent of the bowe. Plutarch hath the very wordes, that are in Appian. The Indians also were good archers, albeit not much praised by Q. Curtius. Hee saith: their arrowes were two Cubits long, which they deliver out of their bowes, with more labour, then effect: for as much as the arrow, whose whole efficacy is in lightnesse, becometh altogether vnwieldy by reason of the weight. And yet hee telleth, that Alexander, at the assault of the principall City of the Mallians, was strooke thorough his Curace into the side beneath the pappes with an Indian arrowe: with whome Plutarch and Diod. Siculus accord. Arrian addeth the wound was so deep, that his breath was seene to issue out together with his blood. The Gothes and other people of the north, that invaded the Roman empire, had their chiefe victories against the Romans by the help of bowes, and arrowes. Vegetius (before alleaged) speaketh it plainly: So our souldiers, saith hee, vnarmed both

both bodies and heads, encountering with the Gothes, were oftentimes wholly defeated, and slaine, with the multitude of their arrowes. I may not pretermite the praise of our nation in this skill. Our owne stories testify, that the great battailes, we gayned against the french, were gayned by the ioint shooting of our archers principally. And that the English have heretofore excelled in archery & shooting, is cleere by the testimony even of Strangers: Cicuta (whom I named before) commending the use of bows, as necessary for the service of the field (& that long after gunnes were invented) preferring the English before all other, and setteth him downe, as a patterne for other to follow. And Patritius, disputing of the violence of arrowes, doubteth not to affirme, that an English arrowe with a litle waxe put vpon the point of the head, wil passe through any ordinary Corsette or Curace. Howsover the credit of bowes is lost, at this present, with many great souldiers, yet haue they of auncient time been highly prized. Vegetius saith, how great advantage good archers bring in fight, both Cato in his booke of military discipline doth shewe evidently, and Claudius, by augmenting the number of archers, and teaching of them the use of their bowes, overcame the enemy, whome before hee was not able to matche. Scipio Africanus (the younger) being to giue battaile to the Numantines, that before had forced a Roman army to passe vnder the yoke, thought hee could not otherwise haue the better, vnlesse hee mingled chosen archers in euery Centurie. And Leo the Emperour in his Constitutions military hath this Constitution amongst other: You shall commaund all the Roman youth, till they come to forty yeares of age, whether they haue meanes skill in shooting, or not, to cary bowes & quivers of arrowes. For since the art of shooting hath been neglected, many, & great losses haue befallen the Romans. And in another place: you shall enioyne the Commanders vnder you, in winter to take a view, and to signify to the Turmarches (Coronells) now many horse, & what kinde of armes the souldiers, vnder their commaundes, stand in need of, that necessary provision bee made, & the souldiers be furnished in time convenient. But specially you are to haue care of archers; & that they, whome remaine at home, & haue vacation from warre, hold bowes and arrowes in their howses. For carelesnesse heerin hath brought great dammage to the Roman State. So Leo. This of old time was the opinion of the Romans concerning archers. Howe we are fallen out with them in our dayes (the skill of the bowe, being a quality so commendable, and so proper to our nation) I knowe not, vnlesse fire-weapones perhaps haue put them out of countenance. And surely it may not bee denied, that the force of fire-weapones of our time doth farre exceed the height of all old inventions for anyeng the enemy. And, when I haue given them the first place, I will not doubt to giue the second to bowes and arrowes: being so farre from casting them off, that I would rather follow the wisdom of the Gracians; whoe albeit they esteemed arrowes the best flying weapons, yet thought it not amisse to hold in use slinges, and dartes. Every weapon hath its property, and that which is fitte for one service, is not so fitte for another. The fire-weapones haue their advantages, they haue also their disadvantages. Their advantage is, they pierce all defence of armour, and lighting vpon a place of the body, the wound whereof endangereth life, they bring with them certaine death. Their disadvantages are, they are not alwayes certaine, sometimes for want of charging, sometimes through overcharging, sometimes the bullet rowling out, sometimes for want of good powder, or of dried powder, sometimes because of an ill dried matche, not fitte to coale, or not well cocked. Besides they are somewhat long in charging, while the musketeer takes downe his musket, vncockes the matche, blowes, proynes, shuttes, casts off the pan,

castes about the musket, opens his charges, chargeth, drawes out his stonring sicke, rammes in the powder, drawes out againe, and puts vp his skouring stick, layes the musket on the rest, blowes of the matche, cockes, and tryes it, gardes the pan, and so makes ready. All which actions must necessarily be observed, if you will not faile of the true use of a musket. In raine, snowe fogges, or when the enemy hath gayned the winde, they have small use. Adde that but one ranke (that is the first) can give fire upon the enemy at once. For the rest behinde, discharging, shall either wound their owne Companions before, or else shoote at random, and so nothing endaunder the enemy, the force of a musket being onely available at point blank. Contrarywise the disadvantage of arrowes is in the weaknesse of the stroke, which is not able to enter a Curace, that the foot or horse now use. Yet can noe weather be founde, where in you may not have good use of bowes: raine, snowe, winde, haile, fogges, hinder little especially the string of the bowe being not so wette) may rather profit. Because in them you can hardly discern, much lesse avoide, the fall of the arrowe. As for quicknesse in delivery the bowe farre exceedeth the musket. A good single archer is able to give five shoote in exchange for one of the muskettier; and that with such cert inty, that you shall not beare of an archer that misse the delivery of his arrow, where the muskettier, often faileth by reason of the accidents and impediments before by mee rehearsed. I thinke that a whole Squadron of archers, being embattailed, may shoote at once together: which onely the first ranke of muskettiers may doe. And make the case there were a hundred muskettiers, and a hundred bowe-men eche digested in ten files, eche file concerning ten men, the bowe men shall be able to shoote as once a hundred arrowes (all their arrowes) for ten bullets given by the muskettiers, namely those ten of the first ranke discharging alone. It must not be pretermitted, that the bowe and quiver both for marching, & all service, are lighter and of lesse labour to use, then a musket, which is noe small advantage in armes and fight. To conclude the bowe-men may be placed behind the armed foote, and yet in shooting over the Phalange annoy the enemy before ioyning, and all the time of fight, even whilest they are at pushe of pike; where the muskettier, there placed, must either idly look on, or else playeng with his musket, most of all endaunder his owne friends. Neither is the force of arrowes so weake, as is imagined, noe not in the arming of our dayes. For the pike albein bee haue his head and body covered, yet are his legges, and feete, his armes, and handes open to woundes: any of which parts being wounded bringes a disability of service. To say nothing of his face, and eyes, before which the showers of arrowes falling like a tempest without intermission, must needs breed a remedilese terrour, and make him thinke rather of saving himselfe, then offending his enemy. The muskettier being also unarmed is as subiect to the shotte of arrowes, as the archer is to the shotte of the musket; and the arrow touching any vitall partie, as much taketh away life, as doth the musket. Lastly a horse-man for his owne person (I must confesse) is safe enough from the danger of arrowes by reason of his armour but his horse, being a faire and large mark, and having neither barbe, nor pectorall, nor ought else to hide his head or breast, how can hee escape woundes? Witnesse our fieldes in France, where our Archers alwayes beate the frenche horse, being barbed, and better armed, then our horse are, at this day. And for the bloody effect of bowes the story of Plutarch is worth the rehearsing. He, in the life of Crassus hath thus: The Parthians opposing the Cataphracts against the Roman horse, the other Persians galloping heere and there disperfedly, and troubling the face of the field, broke vp from the bottom, hills offland, that raised infinite dust, whereby the Romans lost their fight and voice: and thronging together, & thrusting one another were wounded, and died not a fumble, or quicke deathe, but tormented with convulsions

• Plutarch lib.

• Plutarch in Crasso

convulsions and panges of grief, wallowing vp, and downe, in the sande to breake the arrowes in their woundes, or else endeavouring to pluck out the hooked heades, which had pierced vaines and sinewes, renting a freshe themselves, & adding torment to torment: so that many died in this manner, & the rest became vnprofitable. And when Publius Crassus desired them once more to charge the Cataphracts, they shewed their handes nailed to their targets, and their feete fastened to the grownde, whereby they were vnable either to fly, or fight. These wonders did the Parthian bowes, which notwithstanding were not to bee compared to our auncient English bowes, either for strength, or farre shooting. And that wee may not seeme to rely upon antiquity alone, The battaile of Curzolare (commonly called the battaile of Lepanto) fought in our dayes betwixt the Turkes, & Christians by sea may serue for an experience of the service of bowes and arrowes. In which there died of the Christians by the arrowes of the Turkes above five thousand, albeit they were in galleyes and ships, and had their blindes pretended to save from sight, and mark of the Turkes, where as the artillery of all sorts of the Christians consumed not so many Turkes: notwithstanding the Christians had the victory. Nowe then for us to leaue the bowe, being a weapon of so great efficacy, so ready, so familiar, and as it were so domesticall to our nation, to which wee were wont to bee accustomed from our Cradle, because other nations take themselves to the Musket, hath not so much as any shewe of reason. Other nations may well forbeare that, they never had. Neither Italian, nor Spaniard, nor Frenche, nor Dutche, ha these five hundred years, been accounted Archers. It was a skill almost appropriated to our nation. By it, wee gayned the battailes of Cressy, of Poitiers, of Agincourt, in France: of Navarre, in Spaine: By it, wee made our selves famous over Christendome. And to give it over upon a conceit onely (for noe experience can say that our bowe was ever beaten out of the field by the musket) will proue an immitation of Aeps dogge, whoe carieng a piece of fleshe in his mouth over a river, and seing the shadowe in the water, snatched at the shadowe, and left the fleshe. I speake not thus to abase the service of muskets, which all men must acknowledge to bee great; I onely shewe, there may bee good use of bowes, if our archers were such, as they were wont: which is not to bee dispaired, and will easily come with exercise.

8 Dartes] The names of dartes are divers in the Greek Story. A Darte is often called Acontion: and thereof cometh Acontizo, to throwe a darte, and darter is are called Acontistæ. So doth Aelian heere terme a darte. Sometimes a darte is termed Palton of the verbe παλλω signifieng to shake or make quiver. The word Palton is much used in Arrian and Xenophon especially, when they speake of the Persian dartes. Yet Diodorus Siculus nameth the Persian darte Saunion: which name also is given to a Grecian darte by Plutarch, and by the same Diodorus. Sometimes a darte is named Doration: Doru, as I said, being a Speare, and Doration according to Suidas, a little speare, or darte. Aelian useth the word in this Chap. Lonche, albeit it properly signify the head of speare, or darte, yet doth it sometimes signify the darte it self. So is it taken in Xenophon, when hee telleth, that sieng weapons began to walk on all sides, δαρταί, (that is dartes) arrowes, and stones out of slings, and some out hands. And Diodorus Siculus hath δαρταί τὰς ἀρχαί, to throwe dartes, even in the actes of Alexander. Yet wee finde that speares were also cast under that name, and Xenophon faith, that the Thebans cast Dorata against the Lacedemonians. The Darte hath bene in use amongst all nations. The matter, fashion, and force of the Roman darte may be seen in Vegetius, and in Lipsius his Commentaries ad Polybium. The manner of the darting of the Macedonian armed appeareth in the fight betwixt Choragus, and Diocippus before by mee mentioned: where wee find that Choragus cast

first in *Antiquities* (Lanceam saith Curtius) at Diocypus, when he thought him with in his reach. But the darters, here spoken of, are of the light-arm'd. Such were the Agrians in Alexanders Campe, who in all attempts of speed were employed by Alexander, and served to purpose by reason of their lightnesse. The darte of the Grecian was a slender shaven piece of wood, about three foot long, armed at one end with a head of iron with a sharpe point, to the end to pierce, whatsoever it should fall upon. For the length, I guess, it differeth not from the Roman darte in Polybius: and Xenophon seemeth to affirm it, when speaking of the arrowes of the Carduchians, he saith they were longer, then two cubits, & addeth, the Grecians sent them backe againe at the enemy in stede of Dartes. About the middest of these dartes they fastened a thong, which was called *apron*, wherein, inserting their forefinger, they launched the darte with more facility. Xenophon witnesseth it in the same place, and in another place he saith, Xenophon commanded the targetiers to march with their fingers in the thonges of their dartes, the archers with their arrowes nocked, the slingers with their scyppes full of stones, that they might be redy to let fly, when they were commanded. These dartes were forcible enough to pierce armouris of that time, and that with them alone Iphicrates overthrew and destroyed a whole Moris of the Lacedaemonians, which people were accounted the best armed, and the most valiant of the Greekes, before the Macedonians came in credit.

9 Stones.] There are here mentioned two manner of throwing stones, the one with the sling, the other with hand alone. The stones, thrown with the sling, fly with much more violence, then the stones throwne with the hand: and, being cast with a skillfull and strong arme, they reache a greater way, then a man would thinke. And yet not so farre, as bullets throwne out of a sling, which by Xenophons report outreached the Persian arrowes. I have before touched the story: I will now lay downe Xenophons wordes, The Grecians (those ten thousand, that returned out of Persia vnder the leading of Cherisophus, & Xenophon) had not marched farre, before Mithridates appeared againe with 200. horse, and 400. Archers, & slingers, which were very nimble & light. Hee came close vp to the Grecians as a friend. Being neer, some of his horse, & foote began to shoote, other to sling, & to wound the Grecians. The reare Commanders of the Grecians were hardly bested. Yet could they doe nothing to annoy the enemy. For the Cretans shoote not so farre, as the Persians, & carieng noe armour of defence, they were faine to hide themselves with in the body of the armed; & the Darters were not able to reache the slingers of the enemy. Xenophon therefore having the reare, thought good to charge and follow the enemy. But hee was not able to overtake them, (for the Grecians had noe horse) & the Barbarian horsemen, shooting backward in their flight, wounded many of them, that gaue the chace. To remedy this inconvenience Xenophons advice was to provide horse as many, as they could. And hearing, that there were many Rhodians in the Campe, skillfull in slinging, whose slings reached twice as farre, as the Persian sling (for the Persians vsed stones, that filled the hand the Rhodians leaden bullets) hee likewise advised to armethem with slings, and vsed their service. The next day the Grecians furnished out 50 horse, & 200. slingers. And when Mithridates shewed himselfe againe with a thousand horse, & foure thousand archers, & slingers, and came vp to charge, both the Rhodian bullets light amongst his troupes, and the 50 horse issuing forth fell vpon the enemy and put him to flight, and slew many of the slingers in the chace, and tooke eightene horse. Wee may here note two kind of stones one with the stone, the other with the bullet: and besides, that the Rhodian sling with the bullet over-reached both Cretan, and Persian bow: which was yet afterword

more plainly declared, when Tisaphernes charging the Grecians with his Persian archers, the Rhodian slingers so terrified him, that both himselfe, and his troopes withdrew. And albeit hee followed a fure of, yet durst hee noe more approche, but suffered shemiquity to marche all that day, and many other afterward. In this arte of slinging, although many nations laboured, yet were there very fewe, that excelled. The Bible maketh mention of seaven hundred Gibeonites, whose skill was excellent in slinging. Of other nations none might compare with the Balaars: of whom Diodorus Siculus writeth thus: Their armor is three slinges, whereof they haue one about their head, another about their waste, the third in their hand. In warre they cast greater stones, then any other, and with such force, that they may seeme to bee sent out of a Catapult. Therefore in sieges and assaults of Cities they wound the defendants of the walles, and in the field breake targets, and head-pieces, and all defensiue armes. They ayme so certainly at any marke, that they seldom faile in hitting. The cause is their continuall practise from their childehode, their mothers continually enforcing them to sling, even when they are yet children. For setting vp bread vpon a poste, as a marke, they are not allowed to eate, vntill they hitte it, and haue it given them by their mothers to eate. So farre Diodorus Siculus: with whom Vegetius agreeth. The same Vegetius saith that slinges were made either of flaxe, or chaire. The forme was that it had two ends, the one fastened to the hand, the other a leather slippe, being broadest in the middest, lest the stone should fall out. Diodorus hath before expressed with what force a stone went out of a sling. Vegetius addeth, that they are more violent, then any arrowe: piercing head-pieces, Curaces, and other armes. The same Vegetius limiteth the space of their reache to six hundred foote: and saith, that slinges at that distance were seene often to hitte the marke: and attribureth as much to archers. There are, that affirme, that a leaden bullet sent out of a sling will melt with the vehement motion of the aire. Let the credit bee with the reporters. Wee haue not found that experiences in our pieces, which notwithstanding force out their bullet with fire, & that with greater violence, then any hand sling can doe. For stones to bee cast with the hand see Vegetius. Polybius commendeth the vse of them.

10 The armour of the Argilos.] What this Argilos should meane, I see learned doubt, and I have little to say. Whether it come as a diminutive from *argos* (swift) or from a City of Thrace, called Argilos, or from any other originall I will not affirme. Here if the text be not corrupted, and the word crept in, or exchanged by the negligence of some copier, it must signifie a targetier. Which Alians description maketh evident. That there was such a City in Thrace you shall finde in Thucydides. And that the Thracian foote for the moit part were Targetiers, I remember, I haue read in Xenophon. But then a question may againe arise, being the inhabitants of that City were not called argiloi but argilioi (for the City it self was called Argilos) why the Targetier should be called Argilos, and not Argilioi. The change is not great. Many such mistakings are to be found in transcribing of Copies. But I thinke rather there is an error in the text; and that for two causes. First because Alian dividing the foote into three kinds, Armed, Targetiers, and light-armed, and describing of the armed and light-armed expressly by name, not so much as nameth the Targetier, but vnder the name of Argilos. Then for that Lipsius (whether hee had another copy of Alian, I cannot tell) citing this very place of Alian, citeth other wordes, then heere wee find. The Targetiers, saith hee, (out of

slung weapons. The Launciers closed, and charged the enemy with their lances. The word Cataphrasis (to cover with armes) giveth name to the horsemen Cataphracts: and as the horsemen are called Cataphracts, so is the furniture of horse and man called Cataphragma. How they were armed *Ælian* sheweth when he saith they cover themselves and their horses with armour yet was it not always, that the whole horse was armed. ^a For *Xenophon* speaking of the Persians in the time of the elder *Cyrus*, saith, they armed their horses with frontlets and pectoralls & covers for their thighs. As much hee saith of ^b the six hundred horse that followed *Cyrus* the younger against *Artaxerxes*, savinge they wanted cover for their thighs. The horsemen themselves he giueth great Curasses, and cuisses, and head-pieces. So it appeareth that the horse were not all over armed, but onely their heads their breasts and their forethighes. *Titus Pomponius* speaking of the Cataphracts in the time of *Lucullus*, saith, their leggs, and thighs were unarmed. Concerning the Parthians *Suidas*, I know not out of what Author, hath thus: The Curasse of the Parthian horsemen is made in this manner: The part before covereth his breast, and thighs, and his hands to the fingers end, and his leggs. The hinder-part, his backe, and necke, and all his head. There are buttons made for the sides, with which both the parts being fastened, it maketh the whole horsemen seem, as if hee were made of iron. The iron neither hindereth the stretching out, nor the gathering vp of his limbs, it is so exactly fitted to the nature, and sife of all parts of the body. Likewise they arme their whole horse with iron, except his hooves, because their owne armor would little availe, in case their horse miscaried. *Curtius* describeth the forme in the Persian horsemen, whose furniture, hee saith, was made of plate fastened together in continued dependances of scales of iron. ^c *Appian* speaking how the Parthians seeking to terrify *Craesus*, and his army, upon the suddaine cast away the covers of their armour, and both themselves appeared in shining curasses, and head-pieces the Median iron of which they were made during forth a flashing, and dispersed twinkling light, and their horses glistering in brasse, and iron furniture. *Titus doth* *Appian* in the same place note, that the bellies of these horse, was not armed. ^d For the french horsemen saith he, that followed young *Craesus*, when they perceived, how little they prevailed with their staves against the sure, and unpierceable armour of the Parthians, lighting from their owne, and creeping vnder the Parthian horses, strooke them into the bellies, and they impatient of paine and slinging heere, and there, and treading vnder foote, as well their riders as their enemies, died in the place. *Plutarch* hath the like. The Cataphracts, beside their armour of defence, had a lance, or horsemans staffe, to fight with all. ^e *Plutarch* affirmes it: *Lucullus*, saith hee, after hee sawe *Tigranes* his Cataphract horsemen (whoe were of most account) defended, as it were, by a hill, that had the ground about plaine, and broad, & the ascent (which was about fower furlongs in length) not very hard, or steep, commaunded the Thracian, and gaulle horsemen, hee had, to giue vpon the flanke, and to put by the lances with their swords: For the onely strength of the Cataphract is his lance, and it alone hee is able to vse either in defence of himselfe, or annoying the enimie: being by reason of the weight and harshnes of his furniture like a man shutt, and locked vp in a wall. *Flutarch* to *Plutarch*. Like wise the Parthian Cataphracts, albeit they used bowe, and arrows yet they had also lances, with which they came to the shooke with the enimie. ^f When the armie of *Anthony* (saith the same *Plutarch*) sawe the Parthians ready to giue on, the armed turning their face about toward the enimie,ooke in the light armed, and shutt them vp with in their battels: themselves kneeling vpon one knee, held

held out their targets before, the second ranks with their targets covered the heads, and vpper parts of the foremost, & the following ranks did the like one for another, the figure was like the tyling of a house, & represented a shew worth the seeing, and was the surest defence that might bee, to make the arrowes glance off, without harme doing. The Parthians imagining this kneeling proceeded from wearinesse, and faintnesse, layed aside their bowes, and taking in hand their lances, ranne vpon the Romans, whose giuing a iointe shewte sprung vp presently, and striking them with their darts, slewe the first, and put the rest to flight. By these two testimonies the lance of the Cataphract is clearly proved. In what manner the Cataphracts came to fight, *Nazarius* (cited by *Stewechius*) sheweth plainly in a Panegyricke of his. The Cataphracts, saith hee, in whome was the principall strength of the field, vse this discipline in charging. After closing their files, they keepe an equalitie in moving forward to charge, & being free from wounds, they break without difficulty any strength of battel opposed against them. They are sude to bee free from wounds, because both themselves & horses (especially before) are covered with sure armes. Their moving must be slow, because of the weight of their armes, which slownesse was recompensed with the violence of their charge, which neither horse, nor foote was able to resist. And yet ^a yet *Appian* in *Parthicus* 144. A. they had another inconvenience, in that, being overthrowne, or slipping, or falling to the ground, neither horse nor man, were able easily to raise themselves againe. Such was the weight of their armes.

14. Launciers are such] Launciers, saith *Ælian*, ioine with the enemy, & fight hand to hand with the lance. And did not the Cataphracts so? They did, but their armour differed much. The Cataphracts both horse and man, were all over armed. The horse of the Launciers was not armed, and himselfe, albeit hee were armed, yet not so armed, but that many parts of his body were bare of armes. And his armour came much short of the compleate. *Arrian* saith that the Macedonians being launciers were not able to encounter with the Scythians, whose were Cataphracts, both because of their number, and also of their manner of arming. And as the Launciers armour was not so heauie, as the Compleate, so was it more heauie, then the armour of the foote. *Xenophon* seemeth to signifie so much, telling of himselfe, that taking the targetiers of the front, and some out of the midst of the hollow square battaile, and three hundred chosen men, that *Cherisophus* had with him in the front, hee marched away with all speed to seise vpon the toppe of a certaine hill. ^b And exhorting his souldiers to haste, you may well, quoth *Sotridas*, the Scicionian, talke of haste, that are on horseback. I, in the meane time with this heauie target, am scarce able to marche. *Xenophon* hearing this, streight dismounted, and disracking *Sotridas*, tooke away his target, and with it on his shoulder continued his hast in marching. By chance hee had on at that time a horsemans armour, where with althoough he were overpressed, yet slacked hee nothing of his pace. The rest of the souldiers beating and reviling *Sotridas* compelled him both to his target, and place againe. At last they gained the hill, they purposed, and made the enimie abandon the nether ground. *Xenophon* was here overpressed with the horsemans armour. If it had beene but equall in weight with a foote mans, hee might, as well haue endured it, as the rest. *Plutarch* sheweth likewise the weight of the horsemans armour. *Philopamen*, saith hee, willing yet to giue more strength to the Kings party (hee meaneth *Antigonus*, the gardian of *Phillip* after ward King of *Macedonia*) & to come to hands with the enemy that was already in route, lighted from his horse, and in a horsemans Curace, and heauie armour,

armour, wrestling hardy, and laboriously on foote with the ground, that was rough, & full of brooks, & ditches, hee was strooken through the thighs with a darte: the stroke beinge not daungerous, but forceble, so that the head passed through both his thighs. Hence both the heaviness of the Launciers furniture may be seen, and that Philopemens thighs were unarmed, through both which at once hee was wounded with a darte: And so the Launcier not so surely armed, as the Cataphract. The armes, that the Launcier bore are described by ^a Polybius speaking of the armes of the Roman horsemen; who writeth thus: The armour of their horsemen is at this day like the Græcian. Of old they had noe curaces, but fought in short gownes girded to them. By reason whereof they were ready, & actiue to alight from, and gett vp quickly, on their horses. But their fight was daungerous with the enemy, because they wanted armes. Their staues had two incommodities. For, being made slender and quivering, they neither could touche the mark, they aymed at, and most of them, shaken with the motion of the horse, fell out to bee broken, before the head touched, or fastened vpon any thing. Ioyne, that, having no iron point at the butt end, they serued but for one stroke onely, and that at the first. And yet the head being broken of, the remnant of the staffe was of noe vse. The targets they had, were made of oxe-hyde in forme like to cakes named *Popana*, which are vsed in sacrifices. And they were neither fitte to encounter the enemy, by reason they had noe stiffnesse or fastnesse in resistance, and being resolved, and foked, or putrified with raine, they could not bee any thing worthe. Finding these inconveniences by experience, they quickly chaunged for the Græcian armour; In which the first stroke of the head of the staffe is certeyne, and worketh the designed effect, by reason of the forme, which is not quivering, but stiffe and sturdy: & likewise turning forward the butt end, which is armed with a sharpe point, they might therewith fasten a sound, and forcible blowe vpon the enemy. The like may be said of the Targets, which both in charging, and defending, haue a sure & vnfailable vse. Which they noe sooner saw, then imitated. For the Romans, if any other nation, are good to change their fashions, and to choose that, which is best, wherefoever they finde it. The Launcier then had a Curace, a head-piece, a lance, and a sword for his armes, and this was generall in Launciers; but some had besides a target, and were therefore called targetiers. The Launciers were called in greeke Doratophoroi, or Xestophoroi: two severall appellations in shewe, but signifieng in deed but one thing, the one being derived from the matter, the other from the forme of the lance. ^b Doru, as I said before, signifieth wood: and because all the Launciers armes excepting the lance, were of other matter, then wood, the lance was called Doru, (of the wood) and the Launciers Doratophoroi. As for Xylton, or Xeston (for they signify one thing: is commeth of the verbe Xuo, or Xeo to shawe, or polish (as our ioyners doe) and the lances, being made of wood shaven, or polished, are named Xylta, or Xesta, of the forme (as I said) that is given them by shaving, and the Launciers, that beare these lances, Xestophoroi, or Xystophoroi. And heere I am once to note for all, that wee are not to presse wordes according to the proper signification of their primitives, from whence they are derived. For considering there are more things, then names of things (as Logicians say) the most copious language, that is, cannot give proper names to all. Heereof come the wordes of diuers significations. And howsoever names seeme at first rough, or straunge, vse, and custome maketh them smooth, and gives them passage. As the coyne of a Prince is currant by the stamp, hee setteth vpon the mettalle, what mettalle so euer it bee, fine, or base.

dich Xylton and
Doratob 1. 15. F.

16 Acrobolists] The word importeth such, as throwe aloft, or from alofte. Ballo signifieth to throwe: Acron, the highest, or the uttermost. By common vsage Acrobolizo is taken for to dart, and by consequent to skirmish a farre off. Because such as cast streng weapons, as darts, and stones, and the like, came not to stedfast fight, but lay aloofe, and onely, throwe their weapons at the enemy, and of so doing are called Acrobolists. Acrobolismos in Polybius is interpreted Skirmishing. And ^a Diodorus Siculus ioyneth Acrobolismos, and a short meddley in fight together, which Xenophon termeth Acrobolisis by another word flowing from the same fountaine.

17 Tarentines] They are so called of a Citty in Italy Tarentum by name, the inhabitants whereof, that were horsemen, vsed this manner of fight. But he maketh two kinds of Tarentines; one, that ever fought a farre off with darts, and never came to hand with the enemy, the other, that after a dart or two cast, came close up, and fought hand to hand. ^c Livy speaketh of a third kind of Tarentines, who vsed in fight two horses at once made fast together, and one being weary, leaped vpon the backe of the other.

18 Some vse darts a farre off] Of the manner of fight of these horsemen, the passage of Xenophon is worth repeating. ^d After these things done, saith hee, the aide of Dionysius (which hee lent the Lacedemonians) arrived, being more, then twenty Gallies. They brought French, and Spaniards, and about fifty horse. The next day the Thebans, and their confederats, embattailing their armie, and filling the vith the whole plaine even to the sea-side, & to the hills, that lay about the Citty (of Corinth) destroyed whatsoever, might serue to any vse. The horsemen of the Athenians, and Corinthians, seeing the strength, and multitude of the enemy, came not neere vnto them: but the hoismen of Dionysius, albeit fewe in number, galloping heere, and there, disperdely, and putting spurs to their horse, charged them with their darts, and in case the enemy followed, they returned with all speed, and then turned againe, and threw darts afresh. In doing these things they vsed to alight from their horse, and rest themselves, and if any of the enemy singled out to fall vpon them, leaping quickly againe to horse-backe, they fled: and being pursued any distance from the army, as soone as those that pursued them retired, the Tarentines followed, and plyed them with their darts, and put them to great distresse: forcing the whole armie to advance, and retire, as they list themselves. So farre Xenophon. Another example I will adde out of Livy of the Numidians, whose manner of fight is all one with the Tarentine manner. ^e In Liguria saith hee, nothing worthy of memorie was done a long time. At the end of the yeare all things were brought to extreame hasard. For both the Consuls camp, being assaulted, was hardly defended, and not long after, when the armie was led through a Forrest, the way whereof was stright, and narrowe, the Ligurians possessed themselves of the mouth of the straights. Through which when the Consull could find no passage, hee turned about his armie, and purposed to reduce it, the way he came. But the mouth of those straights was likewise possessed by a part of the enemies forces. And now the remembrance of the Disaster of Caudium presented it self not onely to the minds, but even almost to the eyes of euery man. There were wellnigh eight hundred Numidian horse at that time in the camp. The Commander of them promised the Consull to breake through on which side, hee pleased; onely he desired to know on which side most hamblers, and villages were. Vpon them, said hee, I will fall, and sett the houses on fire presently, that, that feare may compell

compell the Ligurians to forsake the streights, they should, and runne severall wayes to defend their owne. The Consul much commended the man, and aided him with hopes of promises. The Numidians vp to horse, and began to ride heere and there, before the enemies gards, provoking yet no man. Nothing at the first fight was more contemptible. The horse, and men, were little, and lean. The horsman vngirded, and vnarmed, saving that hee carried darts; the horse without a bridle galloping deformedly with a stiffe neck, and a head thrust out at length. They purposely augmenting this contempte slid from their horses, and dallied, and sported, to bring the enemy to a gaze. Wherefore the enemy, which at first were intentiue, and ready for a charge, became gazers on, and the most part vnarmed themselves, & sett downe vpon the ground. The Numidians rode vp neerer, and then backe againe, and by little, and little, got to the skirts of the forest; as if their horses, being resty, had caried them forward against their wills. At last, putting spurs to, they broke through the midst of their enemies gards, & entring into a larger field, they sett fire on all the houses next the way; then burned they the next village, and wasted, and filled, all things with fire, and sword. The smoke first scene, then the cry of the people affrighted, lastly old men, and children, fleeing for succor, raised a tumult in the campe. Therefore without command or commaund every man of himself ranne to the defence of his owne, and in a moment both the enemies camp was forsaken, & the Consul, delivered from his siege, came to the place intended. By these two examples the kinde of fight, that these darters on horse-backe maintained, may be perceived, which was not to come neere the enemy, but to keep a loose, and lett their darts fly. Besides not to obserue any order in files, or ranks, but straglingly to gallop the field, seeking by their disbanding to tolle the enemy out of his strength, and so to worke their advantage. And albeit in the second example, the Numidians vsed not their darts, yet they would haue done it, if need had beene; and you shall find in other places of Livy, and Polybius, they did vsually, as also in Caesar.

19 After they haue spent one or two] These darters on horsebacke differ from the other before mentioned, because at the last they issue, and fight hand to hand with the enemy; which the other did not. And what fight they with all? not with lance; for then should they be Lanciers, of whom wee haue spoken. But they fight with battell-axes, swordes, and such other short weapons. Suidas affirmeth it, alleged by Arceius: These, saith hee, at first cast light darts a farre off, and after ward approaching, joyne with the enemy, fighting with battell-axes, or swordes; which kind they call light-horsmen.

20 The horsmen, that vse bowes] I need not alledge any thing to shewe that the Scythians were good archers. It is knowne to any man, that is not ignorant of History. I will onely note, that in fleeing from the enemy, they harmed as much, as in falling on. For as they fled they turned half their bodies backward, and shotte at him, that followed, and expected not such thing. Of which fashion of fight Plutarck giueth this iudgement. The Parthians, saith hee, in their flight shoote backward, & doe it best of all other, except the Scythians; the invention being witty, both to saue themselves by that defence, and also to take away the shame of flight. That which Plutarck attributeth to the Scythians and Parthians, Xenophon saith, the Persians vsed also, both for manner of fight, and flight.

The

The framing of a Phalange, and definition of the art Tactick.

CHAP. III.

But seeing every Phalange containeth an vniting of bodies, offices of command, orders in place, a Convenient number of men, and wordes of Direction aswell for daily exercise, or trayning, as for true fights, It seemeth necessary to deduce euery of these things into perticularity. The first labour therefore in the art Tactick is for a Generall out of a multitude, that cometh to hand confused, to chooe the fittest men, and dispose them into convenient places (that is to order them into files, and bodies) and of the whole number to proportion a reasonable leuie, & fitting the service in hand. For to dispose and enable an Army, skillfully to march, to encampe, & to embattaile, is a matter of no small consequence. In as much as we often find mightie Armies through their disorder to haue been defeated by a handfull of men wel disciplined & exercised. Wherefore Æneas defineth this art to bee a science of warlike motion: Polybius, To be a skill whereby a man taking a multitude servicable or dereth it into files, and bodies, and inst. Teth it sufficiently in all things pertaining to warre.

Notes.

1 THE first labour] After prouision of armour followeth choice of men. What men, and out of what climats, and of what profession, and of what age, and of what constitution of body, and of what education, are to be chosen, because Ælian referreth to the discretion of the Generall, not setting downe any particular, I will likewise passe over, noting onely some places, where hee, that is disposed to seeke, may finde the circumstances of choice of souldiers. Xenoph. Cyrop. lib. 1. 3. 2. A. B. Polyb. lib. 6. 406. C. Et Lips. ad Polyb. lib. 1. Dialogo. 2. 3. 4. 5. Veget. lib. 1. cap. 2. 3. 4. 5. 6. 7. Et Stewechius ad hoc omnia cap. 31.

2 A reasonable leuie and fitting the service] Leuies are to be made according to the warre, which is undertaken. The enemy is not alwaies of one strength, Sometimes the forces, against which wee are to lead our armie, are more, sometimes lesse. The Romans, if the number of enemies were not very great, vsed but a Consular Armie, which consisted of two legions of Romans, and of as many foote of their Allies; when greatest, onely ioyned two Consular armies together. And for Allies their foote, as I said, was equall with the Roman foote, their horse were treble as many, and the Romans having three hundred horse to a Legion, the Allies had nine hundred. Tet in case of great necessitie, wee reade, that the number of the Legions was increased in a Consular armie. Polybius reporteth that, a little before the battail of Canne, the Consuls Lucius Emilius, and C. Terentius, had allowed in their armie, which they led against Anniball, eight Legions, which never was done before. Alexander the great being to invade the Kingdom of Persia, which for wealth, multitude of men, and largenesse of Territories, was esteemed the richest, mightiest, and greatest Empire at that time in the world, had not in his armie above one and thirty thousand foote, and five thousand, and odd horse. Armies composed of multitudes are neither fit to bee guided, and commanded, nor yet to bee provided for.

D

And

a Frontin. lib. 4. c. p. 2.

b Xenoph. in Age-
Gila.

And hee that trusteth to multitudes, esteemeth not greatly the valour of his souldiers. *Xerxes saide, he was not foiled by the Gracians through default of number, but because hee wanted men. As it is folly to leny more men, then is needfull, so is it rashnesse, or rather madnesse to put a few souldiers to hasard against forces, that exceed in number, and valour. Briefly all levies are to bee tempered with consideration of persons, times, places, and other circumstances.*

3 For to dispose and enable an Armie] Heere are sett downe in a word, as it were, the principall heads of the art of warre, Marching, Incamping, and embattailing; to which heads all other may very well bee referred. And of these three *Alian* handleth in this treatise but two, namely embattailing, and marching: of embattailing, so much, as pertaineth to forming of a common Macedonian Phalange; of Marching, no more, then belongeth to embattailing in a march, that is to ordering of your men in that figure, which shall yeald most advantage against the enemy, that meeteth you; excepting that hee shortly toucheth the marshalling of baggage in your marche. The other considerations of marching, as laying, or avoyding ambushes, sending out to discover, when to march by night, when by day, how to deceiue and avoyde the enemy lyeng neere, remedies against horse, against shotte, against multitudes, passages of mountaines, of woods, of rivers, of plaines, of drye, and sandy places, these, I say, and such like, hee toucheth not in a word. And for the skill of encamping, which comprehendeth the seating of your camp, and provision of all things belonging thereto, as also the siege, and defence of Citties, and fortresses, hee likewise passeth it over with silence, as a thing not incident to his purposed discourse.

c Veget. lib. 2. c. 3.

4 A handfull of men well disciplined and exercised] What exercise doth for the making of good souldiers, experience of former times will teach. It hath been the manner of all famous generalls to bring their souldiers to perfection by exercise. *Vegetius saith very well, It is not length of life, or number of yeares, that teacheth the art of warre, but continuall discipline & meditation of armes. Let a souldier serue never so many years, so long, as hee is vnexercised, hee shall bee still a raw souldier. The knowledge and science of armes maketh a souldier, which is not gayned but by action. As long as a souldier handleth not his weapons, hee is noe Actor, but a looker on. For as all abilities in artes (which are called Habits) arise out of a number of actions preceding, so can noe man attaine to a perfect knowledge of armes, till hee haue with care, and diligence, employed his study and labour therein, and upon the foundation of practise raised the frame of sound and perfect skill. Noe man is naturally borne a souldier. One may more incline to warre then another, but the skill commeth not without industry and paines.*

d Plut. in Pelop.

e Plut. in Lycu.

Plutarch saith, that it is neither Eurotas nor the place betwixt Babyx and Gnacion, that bringeth forth valiant and warlike men, but they are to bee found in all places, where youth is bred vp in shame of vice, and boldnesse to vndergoe perill for vertues sake. Eurotas was a river neere Lacedaemon; e Babyx and Gnacion two rivers within the same City. The Lacedaemonians were accounted the most valiant people of Greece. And Plutarch speaketh this of the victory, which the Thebans had against the Lacedaemonians; The Thebans, which till that day had noe reputation of valour, but afterward by exercise, & use of armes, vnder Epaminondas, and Pelopidas, became the bravest souldiers of Greece: Not unlike was the sciens of Pyrrhus to his muster-master: choole you, said hee, good bodies, and I will make them good souldiers. The strength of the body is requisite in a souldier to vndergoe the labours of warre; but exercise it is that giveth the perfect skill, and the desire to handle weapons. Therefore as Demosthenes, being demaunded what was the first and principall thing in the arte Oratory, answered Action, what

f Veget. lib. 2. c. 3.
g Cicero in Brutu
122.

what the second, Action, what the third, Action: So may wee truly say, that in the art military exercise is not onely the first, second, & third, principall thing to make a souldier, but also all in all. *Alian* speaketh not of exercise but in General: what particular exercise is fitt for a souldier, hee, that desireth to knowe, let him reade, Xenoph. Cyrop. lib. 2. c. 2. B. C. & lib. 3. 77. C. D. Veget. lib. 1. ad caput. 9. ad caput. 19. & lib. 2. caput. 23. 24. Iust. Lips. comment. ad Polyb. lib. 5. dialog. 14. Leo. caput. 7. Patric. Parallel. parte 2. 139. Now for the victories, that have bene obtained by a small number of men well exercised, against a multitude vnskillfull, and vnttrained, I need, say nothing. Histories are plentifull witnesses therein. I will onely recite one example wherein the difference may bee seene not between skillfull, and vnskillfull, but between skillfull, and skillfull both enured to labour, and both brought vp vnder the same practise, and discipline of Armes. At what time, after the death of Alexander the great, his chiefeest Commanders fell at oddes emongest themselves; and sought every man to establish himself in the possession of his Conquests, it chaunced, that Antigonus, and Eumenes came together in two sundry battailes. In the first Antigonus had in his army above 28000. foote, 5500. horse, & 65. Elephants; Eumenes lesse foote, 17000. in all (but emongest them 3000. Argyraspides, whoe had served in all Alexanders battailes, & were invincible, & strok a great feare into the enemies hearts) & about the number of horse, his enemy had, & 80. Elephants. *When the foote came to toyne, saith Diodorus Siculus, the fight continued a good while, & at last, many falling on either side, Eumenes his foote had the better by reason of the valour of the Macedonian Argyraspides. They, albeit they were stroken in years, yet in regard of the manifold perills, they had been in, excelled in courage, & skill of fight; in so much that no man was able to withstand them. And therefore being but 3000. in number, they were notwithstanding sett against the enemy, as the strength of the whole army. In the other battaile he speaketh of their age. At that time, saith he, the yongest of the Argyraspides were noe lesse, then 60. years olde, or thereabout; the most of the rest about 70. & some were elder, al of the vnmatcheable in skill & readinesse of fight, & strength of body; such was their dexterity, and courage gathered in continuance of dangers, which they had passed. Afterward rehearsing the battaile, he saith: The Argyraspides ferring themselves close, and with liuely force falling vpon the enemy, killed some, and put other some to flight. And fought against the whole Phalange of the enemy with irresistable fury, not loosing one of their owne men, & yet through skill & manhood slaying of the enemy about 5000. & routed their whole foote, which in number were many times more, then themselves. Thus writeth Diodorus Siculus of the olde practised Macedonians: who yet fought not against strangers, or rawe souldiers, or such, as were newly brought into the field, but against men of their owne nation, that had long handled armes, & wonne many victories, & been instituted, and trained in the same discipline and course military, that they themselves had been before: Such difference long practise, and experience wrought in the one against the other.*

What a file, or Decury is, and of how many men it consisteth.

CHAP. IIII.

TO order into files is to make files. A file is a number of men beginning at one Leader, and continuing in order of followers to the last man.

D 2

The

The number of a file is diversly given, for some allow it eight, some twelue, and some sixteen men. Wee for this time will retaine the number of sixteen, both because that number is proportionable to the indifferent length of a Phalange, and also, if we require at any time to double the depth thereof, and to giue it thirty two men, or to lessen, and contract it, and make it but eight; neither of both shall hinder the service of the light-armed behinde, for whether they vse Darts, or slings, or Arrows, they may easilie with their sleng weapons overreache the depth of the Phalange.

Notes.

NExt after arming, and choyce of souldiers, it followeth to put them in order for service, that is first to file them, then to band them (which is ioyning of files) and lastly to embattaile them, which is to make a Phalange. Of these in the following chapters.

I To make files] The Tacticks haue not exprest the precepts of this arte all in the same wordes. A file is heere called Lochos, the signification whereof is diuers. Sometimes it is taken for an Ambush, and Lochan significeth to lye in Ambush: it significeth beside a number of men, that are of one body, as it were, and under one commaund, who is called Lochagos, and Lochizo is to sett in files. The number of this body hath bene diuersly taken. The Thebans Lochos Hieros first instituted by Gorgidas, or as other say by Epaminondas, consisted of three hundred men. The Lochos of the Lacedemonians of five hundred and twelue. Xenophon in his returne out of Persia telleth, that the number of the Lochoi of the Gracians, which hee ledde, was almost a hundred armed men. And when they chose extraordinarie men to preserve the Placium (a hollow forme of square battaile where in the Gracians marched) from breaking, they appointed six Lochoi, of a hundred a peece, for that purpose, and Commanders to leade them. And after heere reckoneth seventy men to a Lochos. And in the first booke of Cyrus his expedition, hee telleth of two Lochoi of the armed of the Regiment of Menon, that were slaine by the inhabitants of Cilicia, and counted them a hundred men. Cyrus in the same Xenophon commaundeth his Lochos to bee made of twenty foure men. But the Lochos, that Alian heere speaketh of is a lesse number, namely sixteene, which was the file of the Macedonians, as appeareth by Arrian, and Polybius. Albeit Arrian calleth it not Lochos, but Decas; and Polybius the depth of the battaile. This number of sixteene was used by the Gracians also before King Phillips time, as appeareth by Xenophon in his historie of the Gracians. And likewise by Thucydides, who reporteth, that the Siracusans were so ordered against the Athenians. Leo saith it was the manner of the auncient warriers to make a file of sixteen, & calleth it a Tetragonall number.

2 Some allow it eight, some twelue] The Lacedemonians made the depth of their battaile sometimes eight men (for a file is it, that measureth the depth of the battaile) and so fought with their enemies. Thucydides witnesseth as much: the Lacedemonians saith hee, were not alwaies ordered in depth alike, but as their Lochagoi (they were commaunders of five hundred and twelue a peece) thought good, commonly notwithstanding the depth was of eight a peece. Xenophon also writeth, that Dercyllidas the Lacedemonian, being to fight with Tissaphernes, and Pharnabazus, ordered his Phalange into eight. The same proportion was belde by Atinappus the Lacedemonian against the Corcyraens, and

and by Clearchus the Lacedemonian against his enemies. Xenophon saith, that Thrasybulus the Athenian, sailing out of Pyreum against Pausanias the Lacedemonian King, ranged his men into eight. His wordes are: When Thrasybulus and the other armed sawe these things, they quickly gaue aide to their owne people, and put their armed in order eight deepe. Pausanias being hardly layed vnto, and retiring foure or fise furlongs, commaunded the Lacedemonians, and their Allies, to resort vnto him, and there casting his men into a deepe Phalange, ledde against the Athenians. Out of which wordes wee may note, that the Lacedemonians observed not alwaies that order of eight deepe, but varied according to place, or other circumstance. Yet ordinarily they gaue but eight to a file, or to the depth of their Phalange, as Thucydides witnesseth before. The same Thrasybulus with his complices entering the base City of Athens called Pyreum to free his countrie from bondage of the thirty tyrants, having but a few with him, possessed the court, which led to the temple of Diana, called Munychia, and being assaulted by the garrison of the Lacedemonians, ordered his armed men into ten deepe, and the light armed behinde them. The tyrants, and their followers stood in battaile fifty deepe. At the battaile of Leuctra the Lacedemonian armed were twelue in depth, the Thebans fifty. Alexander the great leading his armie against Clitus, and Glaucias, the way being so narrow, that no more then foure might marche in front, made the depth of his armie a hundred and twenty. And the souldiers that Xenophon brought backe out of Persia, when they purposed to sacke Byzantium, put themselves without commaunde in order of fifty deepe. In the text is fifty deepe, but the margin hath eight: which I take to bee the truer reading, because Xenophon saith, the place was faire to sett a battaile, being void of building, and having an even plaine. And it was not the manner of the Gracians to make a Phalange fifty deepe, vnlesse there were extraordinarie occasion. In the battaile of Delos betwix the Athenians, and Thebans, the Thebans were five and twenty in depth, the Athenians but eight. The same Athenian were eight in depth against the Syracusans. So that the depth of eight was much used among the Gracians. How-be it I find not, that they called a file of eight by the name of Lochos. Cyrus the elder made his files of twelue men, and the leader thereof hee called *ἡνῆγεσθαι*, and *ἡνῆγεσθαι*, and the file it selfe decas, which in signification albeit it importen ten, yet wee must retaine the word, as it is used, and not fly to the originall of the Etimologie, as I noted before upon other occasion. But Alian maketh his file of sixteen. His reason followeth.

3 For whether they vse darts &c.] The file being sixteen in number, the souldiers therein every one having after-distance from other three foote, take up in the whole depth forty eight foote, and being doubled to thirty two men, they take up ninety six foote, which amounteth to thirty two yards. That bowes and slings easlie out reache this distance, appeareth by Vegetius, before by mee alleaged, who saith, they stroke their marke six hundred foote of, which in our account by scores, is ten score. Of the dart a man may rather doubt, which notwithstanding with an exercised arme is sent much further, then thirty two yards. Lipsius writeth, that a dart was vsually cast foure hundred foote, which amounteth to a hundred thirty three yarde, or as wee in shooting measure it, six score and odd. The reason why Alian placed the light armed behinde wee shall see heere after in first place.

The order and parts of a file or Decury.

CHAP. V.

THE best man of every file is the first in place, and hee, that leadeth the file, who is also called the file-leader, the Commaunder, & the fore-stander. The last man of the file is called the Reare-Commaunder, or bringer-up. The whole file it self is termed a verse, and a Decury, and of some an Enomoty. Yet there are, that hold Enomotia for the fowerth parte of a file, and the Commaunder of an Enomoty they call Enomotarcha, and two Enomoties they take for a Dimery, & name the Commaunder thereof Dimerites, so that the half file is said to bee a Dimery, and the Commaunder Dimerites. This man is the last of the file. Hee, that standeth next behind the file-leader, is named a follower, and the next after him a Leader, and the next after him againe a follower. So that the whole file consisteth of Leaders, & followers placed successiuey one after another. It be-houeth the file-leader to bee more sufficient, then the rest of the file, and next him the Leader of the half-file, or bringer-up. They define a file to bee a Rowe of followers placed according to their worth successiuey after a file-leader.

Notes.

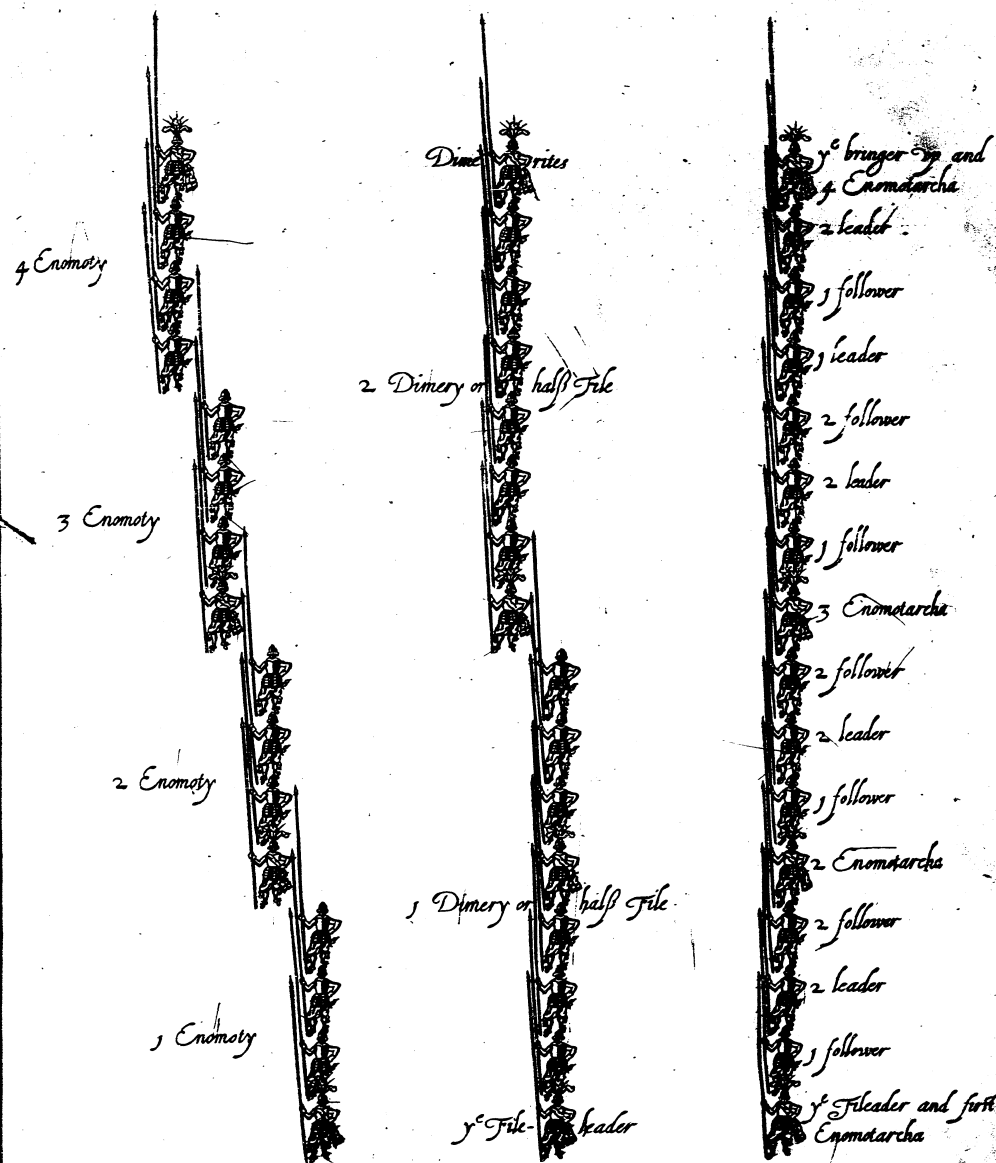

THE best man of every file.] Why the file-leader ought to bee the best man of the file many reasons may bee given first because hee commaundeth the rest. And as in all other things hee that is to rule, and governe another, ought to haue more knowledge, then hee that is commaunded, and governed, so is it in matter of warre. Further, as his skill, so his valour, ought to bee most: that his example may incourage and incite the rest. Which is the cause, that other commaunders also are placed in front, and in the eye of the souldiers that their valour & forwardnes may breed an honest emulation in the souldiers to doe, as they doe. Besides, the first place is most be-seeming him, that best deserveth, and the more valiant a man is, the more hee desireth to shewe it in the face of the enemy, thereby to winne himself honor, and reputation. Furthermore, hee may doe best service in the front, by entring into the enemies battaile, and making way for the rest. Not unlike a sword, whose edge maketh speedy passage into the thing, it cutteth, and draweth after it the rest of the iron, bee it never so blunt. In the front, the ranke of the file leaders giue the push to gaine the field. Which reason I thinke lead^a Gorgidas the first insittator of the Theban Hieros Lochos, not to make an entire troupe thereof apart, but to place it man by man in the first ranke of the Phalange. Lastly the sight of the file leaders, being the choice of the armie, both for stature, and resolution (for so Aelian would haue them) ^b breeds a terrour in the minde of the enemy. Who, seeing such gallants in the front, haue cause to imagine that the rest of the armie, which they see not, is like to those they see. And, being never so valiant, they had rather haue to doe with weak, and relenting then stout, and resolute aduersaries. As at the battaile of Cannae ^c Annibal answered one, that brought him newes, that the Con-sull had commaunded the horse men to alight, and fight on foote, how much rather would I, quoth hee, hee had delivered them bound into my hands. I haue heard many hold opinion, that the manner of the Gracians, to bring their best men first to fight, is contra-

^a Plutarch in Per-sipida.

^b Aelian cap. 11
^c Lico ca. 4 §. 71

^d Liv. decad. 3. 52

The ordering of a File

ry to the institution of the Romans, who held the Triarij (their eldest, and best souldiers) in the rear, and brought them not to ioine, till both the Hastati, and Principes were beaten, or retired. But if wee consider the diversity of both their embattailings, wee shall see noe great difference, or at least wee shall see, that the reason of placing their best men was not much different. The Gracians in framing their foure-fold Phalange made in length an even front of a 1024. files. The files were 16. deepe, and the best men therefore in front, because being placed in the midst, or in the reare, there would haue beene no use of their valour, and the Phalange might haue beene broken, before it had come to their turnes to fight. The Romans contrary-wise, in ordering a Legion, made many maniples, and gave the front to the Hastati, the middest to the Principes, the reare to the Triarij. Nowe the Triarij being ordered in the Reare, might at the beginning bee brought to fight in Front, if need were; being noe need, they kept their place, till their Generalls found it fit to call upon them. So then this is the difference. The File-leaders of the Gracians had the Front, because otherwise in so deep a body, as the Phalange was, they could not haue come to fight: The Triarij might alwayes haue beene imployed in Front, in flanke, or in the reare, as pleased the Generall. And that the Romans also in their severall Maniples placed their best men in Front, I cannot doubt. There stood the Centurions, which were the leaders of the Maniples, and in reason were to bee seconded with the best men under their command. ^a C. Crastinus may serue for an example whose being noe Centurion, but an Evocate, in the battaile of Pharsaly betwixt Cesar & Pompey, bidde his Manipulers (they were of the Manipule, which hee once commaunded) to followe him, and said hee would make his Generall giue him thanks aliue, or dead. Yet must I confesse, that the front was not the proper place of the Evocates. But hee chose the front, and held it a place worthy of his valour. It is said of ^b Catiline that, when hee fought with C. Antonius, hee placed in the front of his army, all the chosen Centurions, and Evocates, and besides of common souldiers such, as were best armed. ^c Livy speaking of a fight betwixt the Romans, and the Latines, and describing the forme of the Roman battaile, after hee had limited the place of the Hastati, & Principes, writeth thus of the Triarij. After the ensignes (hee meaneth the Standards of the Legions) not the Ensignes of Maniples, were ten other Maniples; whereof every one had three Ensignes. The first Ensigne led the Triarij,ould souldiers of tryed valor, the next the Rorarij, not soe well esteemed for strength in either age, or deeds, the third the Accensi, a troupe of left trust, which was the cause, that they were cast in the reare. The Accensi were put in the reare, because there was noe great opinion of their valor: the Triarij had the front, because they were ould souldiers, and had beene sufficiently tryed. See then in dividing of their armie into small bodies, or battailions, the Romans differed from the Gracians: in placing the best men of their maniples in front, they observed the same manner, that the Gracians did in placing their file-leaders in the first ranke of the Phalange.

² A verse] I have translated Stichos a verse. The more usual signification is a rowe of any thing placed orderly. ^d See Xenophon applyeth it to trees, which were planted orderly one after another, and ^e Eustathius to the standing of dancers one after another in depth, even as our souldiers are placed one after another in file. ^f Julius Pollux also acknowledgeth, that there were files, and ranks in Choro, that is in dances upon the stage. But Suidas saith it was commonly taken for a line, which was read from the left to right hand. And to say the truth a verse, as wee read at this day, and as they read, when *Ælian* wrote this treatise, rather resembleth a ranke then a file; because in a ranke men stand side to side, as words doe being placed in a line. Yet because the word is received by use in that other sence, wee must likewise admitte the same.

^c Livius decad. 2 lib. 8. pag. 214. A

^d Xenop. in Oec. corom. 8 to C.

^e Eustat. in Iliad.

^f Jul. Pollux. lib. 4. cap. 16.

^g Suidas. in verbo. sizos.

3 A decury] *This in Greeke Ælian calleth Decania, a word, which in this sence I find in no other Author, then in him, and in Suidas.* Xenophon calleth it Decas: *for doeth 6 Vrbicis and* Arrian, and likewise Hesychius. ^a Leo calleth it decarchian and Akian.

4 An Enomotie] *The word cometh from omnymi to sweare, not of omos a shoulder, as Robertellus, and Parricius imagine; of whom the first translateth it in latine Intergutio, the other in Italian Spalaggione, as is were a backing; Upon this conceite, I thinke, because in a file the whole number standeth one at the backe of another.* Suidas saith: Enomotia is a body militarie amongst the Lacedemonians of 32 men, and is soe called, because they take theire othe together, not to forsake the place assigned them in battaile. *With whom agreeth the great Etymologicon; and Hesychius likewise; who termeth it a body militarie, that taketh an othe and sweareth by the sacrifice, which is offered at such time, as they goe into the field. And surely you shall not finde the word Enomotia applied to other souldiers, then the Lacedemonians, or else to them, that the Lacedemonians commanded: untill it was afterward taken up by the Macedonians.* And Iulius Pollux expressly noteth, that Moira, and Enomotia, are proper appellations of the Lacedemonians, given to certaine of theire militarie bodies. Albeit both the text bee corrupted in Pollux, having Eunomotia for Enomotia, & the interpreter hath worse translated it, reading Enomotia, militarie discipline, & Moira a duty. As the Lochos is great, or little, so is the Enomotia, The Lacedemonian Enomotia was 32 men, the Lochos being 512. but the file of Ælian being 16. and the Enomotie noe more, then the fourth part of a file the Enomotie must containe noe more then foure men. One of euery of these foure must bee a commander; who is called Enomotarcha, or the commander of that Enomotie. So that in the whole file, consisting of 16. there ought to bee foure Enomotarchas. Where they should stand in the file, is a question. Parricius maketh the file-leader the first Enomotarcha, the fift man, the second, the ninth man, the third, & the 13 man the fourth; excluding the bringer vp, whom notwithstanding hee acknowledgeth to bee the second man of the file, and in dignitie next to the file-leader. I am of another opinion; and yet allowe the places of the first, fift, and ninth, but thinke the bringer-vp ought to bee the last Enomotarcha: Arrian confirmeth my opinion: who writeth thus: Alexander returning to Babilon, found Pucestes newly come out of Persia, bringing with him 20000, Persians. Then commending the Persians for theire obedience in all things to Pucestes, and Pucestes for his care, and diligence, in ordering them, hee reparted them into bands according to the Macedonian manner. Over every file hee appointed a Macedonian file-leader to command, and next a Macedonian dimærite, and a Decastater, so called of the paye hee had, which was lesse then Dimærites, and more then the common souldiers; then twelue Persians, and last of all the file a Macedonian, who also was a Decastater. So that in the whole file there were foure Macedonians, three, whose pay was more, then the common souldiers, and a file-leader the fourth, and more over 12. Persians. So Arrian. Out of which wordes wee may learne first the number of the Macedonian file, which consisted of 12. Persians, and 4. Macedonians, in all 16. the number, that Ælian requirith in his file. Next, that the Enomotarchs, or commanders of the foure parts of the file, were likewise 4. Lastly that the bringer-vp was one of the foure by expresse words of Arrian, which is contrarie to the opinion of Parricius, and whereas Arrian termeth the third Enomotarch, Decastateros of the pay, hee received, it is to bee understood, that Stater was a piece of coine, of the weight of foure dragmes of Athens whereof the

Enomotarch

Enomotarch had ten by the moneth. The dragme was of value seven pence sterling, and the Stater, concerning foure dragmes, two shillings and foure pence sterling; and ten of them were valued at twenty three shillings and foure pence. Which was the pay of the second Enomotarch, and of the bringer-vp, as Arrian affirmeth.

5 And the Commaunder Dimærites] About the Dimerite Arrian, and Ælian, differ. Suidas leaveth the matter uncertaine, saing the Dimerite is commander of the half-file, but pointeth not out, which is hee. Arrian distinguisheth the Dimerite from the bringer-vp, and giveth a greater pay to the Dimerite, then to the bringer-vp. The bringer-vp, he saith, was noe more then Decastateros, where as the Dimerite had a greater pay. But Ælian twice in this chapter affirmeth, that the bringer-vp was the Dimerite, and addeth hee ought to bee the second man of worth in the file. And that the place of the reare is not much inferior to the front, a Cyrus teacheth his bringers-vp in Xenophon in these words; You haue a place saith he no lesse honorable, then they, that stand in front. For being in the reare, and seeing & encouraging them, that behaue themselves valiantly, you make them more valiant, and the remisse and backward you incite, & spur on, likewise to doe as well, as the rest. Leo appointeth two Officers to a file, the file-leader, and the bringer-vp, & so maketh the bringer-vp the second person of the file. The reare being then the second place of the file, I conceiue no reason, why, as the file-leader commandeth the one half of the file, so the bringer-vp should not bee the Dimerite, and command the other; and I rather assent to Ælian, that of purpose describeth the particulars of this arte, as hee findeth them set downe in the auncient Tactics, then to Arrian, that, writing the historie of the deeds of Alexander, stumbleth by chance upon these things not greatly incident to his narration. Yet may there bee a resonable construction of both their meanings, if wee consider the severall respects of the offices of these Enomotarchs. For the middlemost Enomotarch may bee termed the Dimerite in regard he standeth in the head of the second half-file, and in doubling the front and some other motions leadeth it: the bringer-vp because hee absolutely governeth it, and seeth that directions, given by higher officers, bee executed.

6 It behoveth that the file-leader bee more sufficient] The file-leader and bringers-vp ought to bee the most sufficient, because they haue the whole governemēt of the file, the one in the front, the other in the reare. The rest are under them, and so bee called by the names of leaders, and followers. But yet is there a further disposition of the file, which, as I finde it in Leo, I will set downe His words sound thus: over the other sixteen you are to appoint a file-leader (as hee is termed) resolute, and fitt for service, and eight of these sixteen, that shall bee found fittest, you shall place in the front, and reare, of the file, foure in the front, namely in the first, second, third, and fourth place, other foure in the reare, in the sixteenth, fifteenth, fourteenth, and thirteenth place, that the front and reare may be strengthened with foure men a piece. The weaker are to bee placed in the midst of the file. This counsell, or rather precept, of Leo hath this reason. The front, and the reare, are the principall places the enemy commonly giveth upon. The front wee alwaies turne against the enemy, if we can. The reare the enemy seeketh to attache, and by it to distresse vs, if hee can. The flanks for the most part are secured by the horse, and light armed. For Leo placeth the light armed, and horse in the flanks. Soe these two places, being most subject to the violence of the enemy, require extraordinarie care, and assurance. As for the weakest, which are in the midst, they never come to strike stroke, but after the front, and reare, are broken, in another place hee writeth to this effect: your Contubernies (the souldiers that cabin together) you shall order according to five men, or to ten, or to foure,

or to eight, or to sixteen, as you shall find most convenient, that being bound one to another with mutuell acquaintance, they may fight one for another in battaile and bee more valiant against the enemy. But you shall doe more wisely, if when you are to joyne, you place brothers by brothers, & friends by friends. For when hee, that fighteth, hath an entierly beloved friend standing next behind him, hee must of necessity haue himselfe with more egerneesse for his friends sake. And the other being ashamed not to requite one, that sustaines such danger in his behalfe, will hardly bee brought to forsake his friend so well deseruing, and first betake himselfe to his secte. The same is the advise of Onosander, and was much practised in auncient time. The Lochos Hieros, or Holy-band, of the Thebans (whereof I spake before) consisted all of friends, that had bound themselves one to another in friendship. With this Holy-band^a Pelopidas gaue the first disgracefull overthrow to the Lacedamonians, that ever they had. Of this band^b Plutarch writeth, that it was never beaten untill the battaile of Cheronæa, when Philip the father of Alexander vanquished the Athenian, and Theban forces both together. After which battaile Philip surueying the dead bodies, and coming to the place, where these three hundred lay, all close mingled one with another, and strooken through with the Macedonian pikes, hee wondred greatly, and hearing that it was the band of louers, and beloued, wept, and said, evilly may they perish, that suspect any filthines in deede, or suffering, to haue been practised amongst such men. Cyrus the elder had his Homotimos nourished up together, and Alexander his Hetairios, whose extraordinarie service appeared in all their battailes. ^c Diodorus Siculus writeth of Sesoosis the Egyptian King to this effect: at the birth of Sesoosis his father did a magnificent and royall deed. For gathering together all the children of Ægypt, that were borne the same day, and setting over them some to nourish and governe them, hee gaue the same education, and institution, to them all, conceiving that they, that were brought vp together, & partakers of the same liberty, would become the best affected, and most assured fellow helpers in warre. This was the iudgement of Myris, the father of Sesoosis, King of Ægypt, in providing assured assistance to his sonne: for the conquering of the whole world, which by certaine blinde prophecies was promised him. Now what little trust there is to bee given to men, that are not acquainted one with another, Pompey that great Captaine of the Romans sheweth in his epistle to Domitius: For men, saith hee, are not quickly to be assembled hether by musters, and if wee had them, you are not ignorant how much they may be relied vpon, being vnacquainted to fight against ould Legions. Yet hath Leo another mixture in his files. For hee would haue the ould, and new souldiers put together in one file. Least saith hee, the ould being by themselves alone, proue weake, and of small force, and the yong disorderly, having litle experience. For the one, albeit ould, yet are well acquainted with service, the other albeit young, and valiant, yet are vnskillfull.

For the Enomoties, dimerie, and file, see the figure.

Joyning of Files.

CHAP. VI.

IJoyning of Files, is when one file is layed flank-wise to another, the Leader of the second file to the Leader of the first, and the follower of the second File-leader to the follower of the first, and so the rest. Every man that ranketh

is

1 File

2 Files Joyned

4 Files Joyned

The flank

The Front

The flank of the second file

is called *Parastates*, as for example the *Leader* of the second file, to the *Leader* of the first, and so their next *followers*, and the rest. As often then, as the second file, the third, the fourth, and so the rest are layd *flank-wise* to the first, it is named *loyning of files*.

Notes.

I *loyning of files* is] A file of it self will worke litle effect against an enemy. For what can a man alone in front doe? Cyrus in^a Xenophon wiseth, that, where as the Egyptians stood a hundred in depth, they had beene in depth a thousand, for soe, saith hee, wee should haue the fewer hands to fight against. The ranke bringeth the multitude of hands to fight. And it is held, that the more hands are with conuentyency brought to fight, the more is his advantage, that bringeth them. This is done by ioyning files together, out of which ioyning, ranks spring, and ranks the more they increase, and extend themselves in length, the more hands are ready to encounter the enemy. Now, as it was said in the former chapter, that files consisted of leaders, and followers, from the first to the last, so is it in this chapter said, that ranks consist of side men from one end of the length of the Phalange to the other: Fewe, or many men, placed side to side in a right line make a ranke; as in two, or three files ioynd together, there are sixteen ranks of two, or three men in a ranke. And the two or three file-leaders make the first ranke, their followers the next, and so the rest untill you come to the sixteenth. The like faileth out in more files. ^bVirbicius saith that the file leaders make the front (as they term it) of the Phalange, which they call also the first ranke. And further, hee saith, they, that runne in an even line betwixt the two wings, the right, and the left, are said to be *Parastatai*, or side men. Likewise: the last ranke is called *Oura*, or the reare, and the commander *Ouragos*, the bringer-up. So Virbicius agreeing with Ælian. Now, out of these two chapters, is a cleare distinction of the names of souldiers, that by reason of their posture, or place, in battaile make the diuersitie of files, and ranks. They, that make files are *Protoistatai*, first-standers, & *Epistatai*, after-standers; which are by vs commonly called Leaders, and followers. For these two saith Ælian make the file from the beginning to the end. *Parastatai* side-standers, or, as we terme them, side-men, make the ranks. And if you measure the length of the Phalange, you doe it by number of men in the ranke, if the depth by number of men in the file.

^a Xenop. Cyrep. lib. 1. 137.

^b Etymol. magna in the word στρατο.

Of a Phalange, the length, and depth thereof: of rankinge, and filing; the diuision of the Phalange into wings: the place of the armed foote, of the light-armed, and of the Horse.

CHAP. VII.

THE whole bodie of the multitude of files is termed a *Phalange*: whose length is the first ranke of file-leaders, and is named, the front, the face, the edge of the battaile, the ranke, the mouth, the Commanders, the fore-standers, & the head of the files.

As much of the *Phalange*, as stretcheth backward from the front to the reare, is named the depth. The bearing straight forth of side-men in length, whether

ther they bee *Leaders*, or *followers*, is *ranking*. And the standing of *Leaders* and *followers* directlie in a line in depth, is *filig*.

A *Phalange* is divided into two whole partes beginning at the middle section of the *front*, and houlding on cleane through to the vtermoſt parte of the depth; whereof the one half is called the *right wing*, and *head*, the other half the *left wing*, and *tail*. ⁵ The two fold ſection it ſelf, that divideth the length, hath the name of the *Navell*, and the *Mouth*. ⁶ The *Light-armed* are placed after the *Phalange* of the *Armed*, and behind them the *Horſe*. Yet if occaſion require, both *light-armed*, and *Horſe* are otherwiſe diſpoſed, as after in this diſcourſe will appear.

Notes.

THE whole body of multitude of files is termed a Phalange] *Joining of files makes ranks, and a sufficient number of files, and ranks together, make a body, which is called a Phalange.* For that name is given to any entire body of an indifferent greatness, compacted, and united for fight. *Hesychius deriveth the originall of the word Apo tou pelas allelois inai; from the standing of the souldiers in battaile neere one to another. Suidas in the same sence, albeit hee differ a little in words, saith, the Phalanges are so called apo tou pelafai anchi, of approaching one neere to another. The great Etymologicon goeth yet a little further, and saith, that Phalanges are as it were Palanges para to pelas kai eggys cinai, as it were Pelangys. These are the connectives about the originall of the name. Which of them is truest, is not greatly to the purpose. It is enough to understand, in what sence the word Phalange is commonly taken amongst Tacick writers, who as I said in a generall Summe of the*

So

So farre Polyenus about the inventor of the Phalange. The number of the Phalange is not alwayes one. It may consist of ten thousand, twenty five thousand, or as many as you list, ^a Antigenus the King of Macedonia had his Phalange of ten thousand. ^b Ptolemaeus King of Egypt, of twenty five thousand. The ten thousand Grecians that went with Cyrus into Persia are called a Phalange. What number the Helvetians, and Ariovistus, had in their Phalange, is not precisely set downe by Caesar. Yet it seemeth by Caesar, that the most parte of the fighting multitude of the Helvetians cast them selves into a Phalange; and those of Ariovistus likewise: But Elians Phalange is restrained to a certaine number, as the next following Chapter will teach.

2 The length whereof] The length of the Phalange is to be accounted by the
 ranke not by the file. The file is but sixteen men deep. The ranke from the point
 of one wing to the point of the other containeth a thousand, and twenty foure men in
 Alians Phalange. So that the files being short in comparison of the ranks, it is reason,
 that the length of the Phalange bee measured according to the ranke, not to the file.
 Suidas agreeth with Alian Jayeng, that the length of the Phalange is the first Syn-
 tagma (the first ranke) of file-leaders, which is ordered in a right line, stretching from
 one wing to another, and is called the face, and the mouth, and the front, & the edge,
 and the first-filing, and the first standers of the battail. The next rowe, being Pa-
 rallel to this, is called the second ranke, and the third, the third ranke, and soe the rest.
 The length is termed in Greeke Mecos, to which is opposed the depth, which is named
 Batros. Neither is there in true account any other dimensions in a Phalange, besides
 the length, and the depth, which are in this chapter mentioned by Alian. Other
 names are given in Greeke writers sometimes, but they signifie either the one, or the
 other.

3 Is named the depth] As the length runneth along by front from one wing to another, so the depth beareth backward from the front to the reare. The depth is properly called Bathos, as I said. ^c And Bathera Phalanx, is a deepe Phalange. ^d ¹ Died Sicil. 28
^e And ^f Arrian saith, Alexander ordered his Phalange as Bathos, in depth. And ^g Polybius, that the Romans made their battaile much shorter then before, but much deeper, Bathyteran. And as it is called Bathos, for the most part, so is it by ^h Leo called also Pachos. For the depth of a file is by him termed depth, or Thickness, Bathos etoi Pachos, in two severall chapters of his Tactics; not in respect of the file it selfe, which is no more then a long line, as it were, and carrieth neither Thickness nor breadth, but in respect of the Phalange, the depth whereof is measured by the file. And in the fourth, the twelfth, and fourteenth chapters hee termeth the depth of the Phalange it selfe (Thickness) Pachos alone with out adding Bathos; shewing thereby, that Pachos also signifieth the dimension of the Phalange from the front to the reare. But where some are of opinion, that Platos, breadth, ought to be read in those places in steede of Pachos, Thickness, they perswade mee not to bee of their mind. ^k For ^l Elian ^k after cap. 50. himselfe giveth an Attenuation, or Thinning, (which hee calleth Leptymos) to the Phalange: and that cannot bee understood, unless there were in it a kind of Thickness before. And to make it more plaine, hee saith, that this Leptymos is, when the depth of the Phalange is gathered up and from sixteen men it becometh a lesse number. So that the Thickness of the Phalange is the full sixteen, which is also the depth, and making of it Thinner is to lessen the depth. To a Place Platos is firstly attributed, a Place being onely superficies, which consisteth of longitude and latitude. So ^m Polie- ¹ Polien. lib. 4. nus speaking of a valley, wherein an ambush was layde to entrap Alexander, saith, the length stretched farre out, but the breadth, Platos, was narrowed to four sur- ⁿ in Alexand. 5. 21
longs. The name of Platos is likewise given to a place by ^m Polybius. But to say the ⁿ Polyb. lib. 22. ^o D.

truth Platos in a Phalange rather signifieth the length, then the depth, as appeareth by *Alian* after in the foure and forty chapter. And *Leo* calleth the front of the Phalange Platos, and when hee would haue the front enlarged, or doubled, hee giueth this word of direction *Platynon pros ta amphoterà mēre*, enlarge the front on both sides.

4 The right wing] That which in the English tongue is called a wing, is termed in Greeke *Keras* a horn. Wee in our warres of auncient time diuided our armies into three parts, The vantage, the battaile, and the reare-warde: and, when wee came to fight, set them for the most parte in an even front, the battaile in the midst, on the right hand, the vantage, which was called the right-wing, on the left, the reare-warde which was called the left-wing. Properly enough for our combattailing. For the battaile is, as it were, the body, and the vantage, and reare-warde, are the wings, which in a manner sticke out from the body, and where-by the body is supported: that, that wee call wings, the Grecians, and Romans called horns in the battaile. The word *Keras* signifieth a point bearing out from the height, or ends, of any thing. It is vsed for the toppe of Rocks, and for promontories, and such like; And in a Phalange it properly signifieth the two points (the right and the left) of the wings. The English word wing I am faine to retaine, because it is familiar, and in vs. *Alian* heere will haue the wings to stretch out from the middle section to either point (the right and left) of the Phalange; vnder which appellation must fall to the right wing the whole space, that beginneth at the middle intervall, and runneth along to the corner of the battaile on the right hand, to the left, all that is comprehended betwixt the same space, and the left corner of the battaile.

5 The right should section] In Greeke it is nam'd *Dichotomia*: because it parteth, and diuideth the Phalange into two even parts, beginning at the front, and stretching out to the reare. And *Alian* in the tenth chapter of this booke nameth it *Apotome*. But heere hee speaketh of no more intervalls, or partitions, of the Phalange, then of his one in the midst. I would thinke there should be more. *Onofander* saith: let there be certaine intervalls in your battaile, that if your enemy advance, your light-armed after they haue spent their misse weapons, and before the Phalanges joyne, may retire leasurably in the intervalls, and without disorder come behinde to the reare. For it is not safe for them in retiring to fetch a compass about the whole armie, or to turne in againe on the outside of the wings. For the enemy, hasting to come to hands, would easily prevent, and intercept, them in the midst; so that they neither should be able to breake through the armed, already closed for fight, and falling vpon their owne weapons, they must needs disorder their owne people, every man after other seeking to finde a way through them to escape the danger hee is in. Thus much *Onofander*; from whom wee may learne, both that there ought to be more sections in the Phalange, then one, and that the institution of them had this chiefe end, to receive the light-armed in their spaces, after they had skirmished with the enemy, and were by them forced to retire. I may adde, that *Alian* placing the light-armed in the reare of the Phalange if you giue but one section vnto it, it will be as hard for them, to advance, and s'ue, before the front, as it will be to retreat after their service done. It seemeth, that *Leo* giueth three intervalls to the Phalange of the auncient Tacticks. He saith: they opposed the bodies of the armed against the enemy, and diuided them into foure parts, the right, and left, and the middle-right, and middle-left parte. Making so many parts, the parts must be distinguished (as I collect) by intervalls, which ought to be one after

after the first body of the right-wing, another after the second, which is the middle section, the third after the third. And this Third section is bounded with the fourth body, which maketh the point of the left-wing. For if the Phalange were whole, and entire, without more intervalls then one, how could there be foure parts? For seeming them by Phalangarchies, without leaving spaces betwene, it could not be said, there were but foure parts of the Phalange, considering, that as well the Merarchies, Chiliarchies, Pentecosiarchies, Syntagmataes, are parts of it, as the Phalangarchies. But being distinguished by partition of intervalls, the foure Phalangarchies become foure parts, namely, the right, left, middle-right and middle-left: as *Leo* heere termeth them. The same *Leo* speaketh after more plainly, enioyning his generall to separte, and diuise *Diachorizein* the whole number of his armie into foure parts. For, as *Choris* signifieth a part or severed, so *Diachorizo*, being derived from it, signifieth to put asunder, or sette a part. *Suidas* is yet a little more cleare. A Phalangarchie, saith he, is two Merarchies of foure thousand and ninety six men. This as some saye is the section, *Apotome*, of the wing, as other, it is a *Meros*. Of auncient time it was called *Sirategia*, and the commander *Sirategos*, but now hee is termed *Phalangarcha*. *Suidas* maketh the wing to haue a partition or section, and saith, some call a Phalangarchie by the name of this section. Before mee heard out of *Alian*: that the wing (right or left) did stretch out from the middle section to the outward most point of the battaile on either side. And as the middle section diuideth the Phalange in two parts, which are called wings, so this section (spoken of by *Suidas*) being in the midst of the wing diuideth the wing into two parts. To call a Phalangarchie (which is a body consisting of foure thousand and ninety six men) a section, is, I confesse, an vnproper speech, but tolerable notwithstanding, considering that the whole foure-joide Phalange is composed of the foure Phalangarchies, and that the section of the right-wing beginneth at the left hand file, or inward point of the right hand Phalangarchie, and endeth at the right hand file of the second Phalangarchie. And wee are not to expect the same exactnesse of speech from souldiers, that is common to men skillfull in the liberrall sciences. Souldiers, that profess action, haue their end, if they be understood of those, they commande. Artifices are contemned, that clothe not the precepts of their arts with elegant, fitt, and exact termes. Seeing then the beginning of the section of the wing is at the flanke of the first Phalangarchie on either side of the Phalange, wee may after a sort terme the Phalangarchie a section of the wing, because it boundeth the section. At least by this place of *Suidas* wee may gather, that there was an intervall in either wing, which in reason ought to be in the midst of the wing, and to lye betwixt the two Phalangarchies. For so many there are in one wing. *Polybius* telleth of *Philopamen*, that, fighting against *Atachanidas* the Tyrant of Lacedæmon, after hee had placed the light-armed, the Lanciers, and *Illyrians* to fight in one front, hee added in the same right line the Phalange distinguished into bodies according to Merarchies and diuided by severall distances. I translate *Speiredon* distinguished into bodies, because *Speira* signifieth a militarie body amongst the Grecians, and is by the Grecians, that wrote the Roman histories, used sometime for a Legion, and sometime for a Cohort. And it seemeth that *Speiredon* is heere by *Polybius* put in the same sense that *Eis Speiran* is by *Plutarch*: who mentioning the reformation touching affaires militarie, which the same *Philopamen* brought in amongst the *Achaians*, writeth thus: their manner and forme of embattailing was not usually parcelled out *Eis Speiran*, that is (as I interpret it) in severall bodies, but using a Phalange,

Phalange, which had neither protension of pikes, nor closing of targets in front (as the Macedonian manner is) they were easily foiled, and broken, by the enemy. The meaning of Plutarch is (as I conceive) that the Achaians in former times used to order there Phalange in a continued length without intervalls which Philopamen reformed, and taught them to make divisions by intervalls; And the practise of Philopamen is the best interpreter of his owne counsell to the Achaians. This practise Polybius setteth downe to bee the division of his Phalange Kata tele speiredon en diastemasi into bodies distinguished by intervalls according to Merarchies. Polybius also, to shewe, what bodies they were, useth the word Tele, which I translate Merarchies, having my warrant out of ^a *Alia*n: who saith a Merarchie consisteth of two Chiliar-
^a *Alia*n lib. 2. cap. 9. chies, and containeth two thousand and fourty eight men, and a hundred and twenty foure files; and addeth, that it is of some called a Telos, and the leader a Telarch. A man may doubt seeing Philopamen made an intervall betwixt every Merarchie, whether hee made seven divisions, or no: For in *Alia*n's Phalange there are eight Merarchies, betwixt every of which if a distance were, there must needs arise seven intervalls. To cleare this doubt wee must understand, that the Phalanges of the Gracians were not alwaies of the same number, as I noted before. *Alia*n's, and the Macedonian Phalange, consisted of sixteen thousand and odde. Antigonus had but ten thousand. Demetrius eleven thousand. Other had more, the Lacedaemonians lesse, and likewise the Gracians for the most part. And it seemeth, the Phalange of Philopamen was no more, then eight thousand, and odde, in which number there are but foure Merarchies. As *Alia*n's Phalange comprehending sixteen thousand and odde, wherein are foure Phalangarchies, hath likewise three divisions by Phalangarchies. And yet in this Phalange of Philopamen, if you account the file to haue but eight men (as the most Gracians used in their files to haue) these foure Merarchies will possesse as much ground in front, as the Phalangarchies of *Alia*n's Phalange doe, the file being sixteen. Neither is it new to figure out the bodies greater, or lesse, according to the number of the Phalange. ^b *Leo* commandeth his Generall, when the number will
^b *Leo* exp. 4. §. 6. lib. 6. cap. 65. not reach to sixteen thousand (the number of the old Phalange) to hould notwithstanding sixteen men in a file, and to divide his Phalange into foure equall parts by intervalls, excepting some few, which hee would haue reserved for other uses. To conclude *Alia*n him self seemeth to acknowledge more sections, then one, when in the tenth Chapter of this booke hee speaketh of the middle section mese apotome. For this word middle being a relative, can not bee understood with out two other at least, which are placed on either side. And all the figures, that I haue scene, of a fourefold Phalange allowe three sections, and no more, that is to saie, one in the middle, and the other two in the wings. What the distance and dimension of these sections ought to bee, I finde not set downe. But, if I might haue leave to coniecture, I would thinke, they ought to bee large enough for a troupe of horse, framed wedge-wise, after the Macedonian manner, to passe through; the last ranke whereof being fifteen (as appeareth in the twenty chapter of this booke) and the horse placed in the reare of the light-armed it is needfull, if upon any occasion they were to bee drawn through to serue in the front, the distance of the section should bee sufficient to giue them passage without disorder. And I am the rather confirmed in this opinion, because I see the intervalls betwixt the Roman maniples so proportioned, that the Principes might passe through those of the Hastati, and the Triarii through those of the Principes. But I proportioned out the intervalls to the horse, not to the light-armed, for that the light-armed may bee divided into severall bodies without inconvenience, but any breaking of the horse-

horse wedge breedeth a confusion in the whole troupe. Yet where a troupe of horse may finde way, there may a Centurie, or Colours, of light-armed finde also way.

6 The light-armed are placed after] ^a *The* light-armed were diversly ^a *Alia*n exp. 31. placed, sometimes before the front of the Phalange, which kind of placing is afterward called Prataxis, sometimes on the wings, and it is called Hypotaxis, sometimes betwixt the files of the armed fronting in a right line with them, and it was called En-taxis, sometimes in the reare after the Phalange, which was called Epitaxis. All these are spoken of by *Alia*n hereafter in this booke. ^b *There* is another kinde ^b *Alia*n exp. 42. of placing the light-armed, when they are throwne into the midst of the battaile, being hollowed for that, and other purposes. Heereof *Alia*n likewise treateth in this booke hereafter. And albeit the most usuall embattailing of them hath beene in the wings, yet the bestowing in the reare according to *Alia*n's minde hath also advantages. First it concealeth their number, which because they are shadowed with the pikes standing before, can hardly bee discerned. Then it is easie from the reare to drawe them to any place of service without disorder, bee it before, on the wings, or behinde the reare. Further, it will not bee easie for the enemies horse to charge them, the armed standing before for a sure defence. Lastly, from the reare they shall bee able at all times to anoye the enemy, before the battaile ioynes; as soone as the battaile ioynes, and all the time of fight. Neither doth this manner of embattailing want examples of the old historie of the Gracians. ^c *The* embattailing of Cyrus the elders armie, in Xenophon, hath the light-armed ^c *Xenop* Cyrop. lib. 6. 167. B. in the reare. I will set downe the effect of Cyrus words at large because they containe the ordering of an armie to fight according to the judgement of Xenophon. Cyrus then being to trye a battaile with Cræsus thus directeth his Commanders: you, saith hee, Araspes take your place in the right wing, as you now doe, and you the other Myriarches, as you are accustomed. For when the fight is once a foote, noe Chariot may change horses, and command the Taxiarches, and file-leaders, to order their files every one divided in two parts Phalange-wise, that is each half fronting one with another in a right line. A file containeth foure an twenty men. Then saide one of the Myriarches, doe you thinke Sir, that wee shall bee able, in this order, to encounter so deep a Phalange, as the enemies? Cyrus answered, the Phalanges that are deeper, then may with their armes reach the enemy, are they fitt thinke you either to anoye the enemy, or profite their frindes? For my part I could wish those, that are ranged 100. in depth, to bee in depth a thousand. For so should wee haue the fewer to fight with all. The number, that I giue for the depth of the Phalange, I doubt not, but will entirely serue for vse, and maintaine a joynt fight in every part. The Darters I will place after the armed, and after the darters the Archers. For who will sett them in front, that confesse themselves vnable to maintaine a fight hand to hand? Howe then will they hould their grownde, if they bee sett before the armed? but being in the reare, some with darts, other with arrows, sent over the heads of the armed, will greatly endamage the enemy. And it is cleere, that wherewithall foeuer an enemy is endamaged, with the same a mans owne side is eased, and relieved. You therefore order your selves, as I haue appointed. As for the captaines of the Targetiers I will haue them, and their files, stand likewise next the armed in the Reare, and after them the Archers. And you the chiefe Commander of the Reare

enjoyne the other reare Commanders every man to haue an eye to those vnder him, that they doe their duties. And let them sharply threaten the negligent, and in case any man treasonably forsake his place, punish him with death. For it is the worke of Commanders both with word, and deed, to encourage those, they command, & to make the cowards more affraide of them, then of the enemy. This is your charge, but you Euphratas, that command over the Engines, see that the beasts, that drawe the Engines, and Turrets, followe the Phalange as neere, as may bee. And you Daouchus, that haue the charge of the baggage, come with your manie next after the Turrets, and let your Sericants seuerely punish them, that hast to much before or come to slowly after. And you Carduchus, that rule the wagons, wherein the women are, order them next the baggage. For all these, comming in the reare, will both breede an opinion of multitude, and giue vs meanes to lay an ambush, and will force the enemy, purposing to encompasse vs, to fetch a larger compasse, which the larger it is, soe much the weaker must hee be. And you Artabafus, and Artagerias, each of you leade next after these, the 1000. foote you commande a peece. And you Phranuchus, and Asiadatas, order the Chariarchies of horse you commande nor with the Phalange, but set them by themselves apart behind the wagons; and when you haue done it, repaire to vs with the rest of the commanders. But you are to bee in a readinesse; as if you were first to fight. And you the commanders of the Camel-riders place your selues after the wagons, and doe what Artagerias shall bidde you. And you the Commanders of the Chariots, after lotts are cast, let him, whose lotte it is, range himself, and his 100. Chariots, before the Phalange; the other two hundred, one of them is to follow, the Phalange on the right side, wing-wise, the other on the left. So farre Cyrus. I haue rehearsed the words at large, principally to shewe that the light-armed in ancient time were placed sometimes behinde the Phalange; and yet further also, to represent the manner of embattailing an armie, which was then vsuall. For heere haue you set downe the place of the Myriarches, & of the other commanders, which was in front, then the place of the pikes, of the light-armed, of the reare commanders, of the Engines, of the baggage, of the wagons, wherein the women were, of the gards for the baggage, both horse, and foote, of the Camels, and of the Chariots. And albeit many of these particulars agree not with our manner at this day (for wee haue neither Engines, nor Camels, nor Chariots, nor slings, nor darts, nor arrowes) yet is the reason of warre alike in all, and in our placing also the fitnessse of seruice principally to bee respected. The place of the horse is heere omitted by Xenophon, which may be supplied out of the seventh booke, where Chrysantas Generall of the horse is saide to stand on the right wing of the Phalange with half the horse, Hyaspas on the left with the other half. But to returne to the placing of the light-armed, the same Xenophon testifieth, that it was the Egyptian manner to order their light-armed behinde, & that in the battaile betwixt Cyrus, and Crasus, the Egyptian archers, and darters, were with drawne swords compelled by the reare-commanders to shoote, and cast their darts. Thrasibulus in his fight against the thirty Tyrants set his armed in front, and in the reare his targetiers, and darters, without armor, and those that cast stones. And it seemeth by the words of Thrasibulus to his owne side, that the Tyrants did the like; The Tyrants, saith hee, haue brought vs to a place, in which by reason of the steepnesse they must ascend, and can neither cast stone, nor dart, over the heads of their owne people, that are embattailed before. Where wee contrarywise, whether wee throwe jauelins, or darts, or stones, shall easily reache, & wound many

many of them. The stones and darts of the light-armed were to flye over the fronts of the battaile, and that could not bee unless the light-armed were placed behinde; I will adde one example onely out of Plutarck to shew the seruice of the light-armed in the reare. Plutarck discoursing of the battaile fought betwixt Sylla, and Archelaus, the Generall of Mithridates, at Cheronæa, hath thus: Afterwards the foote forces came to joyne, the Barbarians holding out, and charging their long pikes, and endeavouring with locking their targetts close together, to mainteine the order, and closenes of their Phalange: The Romans on the other side, casting away their darts, and drawing their swordes: putte by the enemies pikes in choler, to the end they might come quickly vp to them. For they espied, opposed against them in front 15000. of the enemies slaues, that were enfranchised by Proclamation of the Kinges generalls: & enrolled amongst the armed. And when the Roman Armed could hardly breake them, by reason of their depth, and fast knitting together; and of their bouldnes in daring (contrary to the nature of slaues) to abide the danger of the encounter, the arrowes, and darts cast in abundance from the Reare, made them shewe their backs, and fall in a route. Wee finde heere, that the light-armed from the reare effected that, which the Armed could not. These slaues endured the shooke, and could not bee broken by the armed, and yet were defeated with Arrowes, and darts, from the Reare: Nowe for the distance that should bee betwixt the bodies of the light-armed, and betwixt them, and the reare of the armed, Ælian saith nothing: I make noe doubt, but there ought to bee as great (if not greater) as in the sections of the armed. For wee must vnderstand, that the sections, that serued to sever the Phalangarchies one from another, must runne through the light-armed in depth to the reare. And by them are the Epixenagies to bee deuided a sunder, as the Phalangarchies are: with Epixenagies answer the Phalangarchies for number of files, albeit not in number of men. Likewise there ought to bee, a greater space in ranke, and file, then the armed had. For the handling of misliue weapons, require more liberty of place, then the managing of a pike, or sword. A dart can not bee sent for cible without running two, or three, steppes in the delivery of it. A sling being throwne, and circled about the head, before the stone, or bullet, can bee forced out to any purpose, will not suffer a neere stander by. In bowes, and arrowes, is the like reason, if they be used as they ought. Besides the light-armed, in their fight are tied to noe certainty of order, or ground, but fight dispersedly: Soe that the more ground they haue, the fitter they are for seruice. In which respect a large interuall crossewise betwixt the armed, and them, should serue to purpose: it having liberty for their motion forward, and backward, as occasion should require.

7 And behinde the Horse: I haue not read in any greek historye, that the horse-men in a sett battell, haue beene ranged behinde the light-armed. The vsuall manner was to place them in the wings. See did Alexander before he passed the River Granicus: soe at Issos, soe at Gangamela: Soe did Antigonus, against Eumenes, and Eumenes against Antigonus: Soe Ptolemeus against Demetrius, and Demetrius against Ptolemeus: and in brief all the Macedonians, and the Græcians, before the Macedonians were accounted off for matter of armes: unless some speciall cause moved an alteration. And, as I shewed out of Xenophon, before all their times. Cyrus albeit, hee set the light Armed in the reare, notwithstanding hee bestowed the horse in the wings: Alexander having passed the River Ister as long as hee marched in the corne lande, placed his horse behinde his Phalange, when hee entred the Champeigne, hee set them on the right wing: and lastly cast his Phalange in to a Plassium: and ordered his horse before. In the Corneland, they followed (for feare of an Ambushe) in the Champian they marched on the

right wing, because on the left, the Phalange was secured by the River; before the Plæsum, that being over-layde with the multitude of the enemy, they might have a sure retreat to the foote. The same Alexander, when hee was to fight the Battaille of Issos with Darius, as long as hee was in the streights, marshalled his horse after his foote. But in marching forward, coming to open ground, when he might give full length to his Phalange, hee placed his horse on both the wings. But the reason of setting them behinde was in the streights of the place: and hee being incertaine how neere the enemy lay, was loathe to put them to hasard, before they had liberty of ground to order themselves, and might have assistance of the foote. For otherwise it was an ordinarie matter in marching (as it is the manner also at this day) to dispose the horse half behinde, and half before.

^a Xenoph. hist. lib. 4. c. 19.

I will content myself with one example. When Agesilaus retournig out of Asia, passed through Thessalie, the Thessalians, allies of the Thebans, followed him, and sought to endamage his armie to their uttermost. Hee had before disposed his march into a Plæsum, with the horse half in front, and half behinde, now when the Thessalians ceased not to molest him, by falling vpon his reare, hee sent to the reare all the horse of the vanguard, excepting those, that attended his person. Either party prepared them selues to fight. The Thessalians holding it not sure with horse alone to incounter armed foote: Turning about their faces, began leasurely to retire, and the Lacedæmonians slowly to followe, Agesilaus, perceaving the error of both, sent the best of his horse, that were about him, commanding them to signifie to the rest, that they together should goe, and charge the Thessalians with all speede, and giue noe respite to them, to turne their faces. The Thessalians contrary to their expectation being hotly charged, some fled, other some turned about towards the enemy, other some endeavouring to turne, were surprisid by their enemies, that by that time were come vp to their flanke. Nowe for the reason of Alians placing the Horse in the reare, I haue noe more to say, then, that from thence they might bee soone drawn to all places, front, flanke, or wheresoeuer the enemy is like to distresse vs. For it hath bene the forecast, of all generals to fashion their battails according to the figure the enemy hath before chosen. Examples are so plentifull, I neede not allage many. Onely I will remember one latine story of placing horse in the reare. L. Lentulus, and L. Manlius Acidinus in Spaine being to fight with the Illergetes, and Ansetans, and other Spaniards, that had revolted from the Romans; in this very kinde of placing horse in the reare imitated, and gotte the advantage of, and defeated their enemies. Livy hath the story, and writes thus in effect: The next day at the rising of the sonne the Spaniards being all armed, and set in order, shewed their battail, about a mile from the Roman campe. The Ansetans were in the midst the Illergetes held the right winge, other obscure people of Spaine the left: Betwixt the wings, and the middle parte, they left broad inter valls, to giue passage to their horse: (when time should bee) to send them through to charge. The Romans Embattailed after their wonted manner, Onely then imitated the enemy, in leaving open waies, for the horse betwixt the legions. Lentulus imagining that partye, and none other, should haue vse of their horse, that first possessed these inter valls of the aduerser battaille, commaunded Cornelius the Tribune to giue direction to the horsemen, presently to charge through, the foote on both sides came to blowes, and the fight was hard, when the Roman horsemen passing through the Spaces, and falling vpon the middest of their enemies at once disordered the battaille of foote and shut vp the wayes against the Spanish horse; by which meanes, after noe long fight,

^a Livy lib. 3. c. 1. ^b The like was done by M. Valerius the Dictator against the Heluans Livy deca. 8. lib. 10. c. 25. ^c And by L. P. prius against the Samnites Livy deca. 1. lib. 30. c. 58. ^d And by Sulla against Archelaus Brodun. lib. 2. c. 2.

fight, the enemy was utterly defeated. Where Livy saith the Romans embattailed after their wonted manner, his meaning is they ordered them selues in Maniples, or Battallions, as we now terme them (for that was their wont.) But when hee addeth, they imitated the enemy in leaving open waies for the horse, betwixt the legions. Wee must understand that a legion was thus embattailed: First they divided their legion into thirty Maniples, ten of the Hastati: ten of the Principes, and ten of the Triarij. The ten maniples of the Hastati, they set first in an even front, leaving soe much distance, or void ground betwixt every Maniple, as a Maniple it self tooke up in standing. At a reasonable space behinde, were the Principes placed in as many maniples: but soe that their maniples stood directly behinde the void spaces of the Hastati. And against the bodies of the hastati, they left likewise spaces in the Principes to the end, the Hastati being overlaid, might retire within those spaces: or else themselves might advance against the enemy, through the inter valls of the Hastati. Lastly at a larger distance behinde these were the Triarij set, and divided with spaces betwixt every maniple, which spaces were great enough to receive the Principes, in case they retired also. Now the Horse being ordered in the reare after the Triarij, if from thence, they had gon to charge the Enemies front, through the spaces of the Triarij, they must of necessity, haue fallen vpon the Maniples of the Principes whoe were set directly against the inter valls or spaces.

To giue therefore free passage to their horse, the Roman Generals removed the maniples of the Principes from their ordinarie place, and bestowed them, in a right line, after the maniples of the Hastati, and made an open lane, (as it were) from the reare of their battell to the front. So that nothing hindered the horse, but they might freely fly up to, and fall vpon the enemies front. And yet I take not Alians meaning, to be, that the Horse set in the reare, should during the time of the fight still remaine there. For soe would noe great service bee had of them. But hee placed them there the rather to avoide confusion in ordering the foote. And that after their embatteling, they might bee led from thence to any place, front, or flanke, or wheresoeuer they might yeeld most vse. For in the fiftteenth and twentieth chapter, he would haue both light-armed, and horse soe placed, that they might answer all attempts of the enemy. And in his caution following, hee saith, if occasion require both horse and light-armed, may bee otherwise placed. That they were usually placed in the wings, I haue before shewed. The examples declare they were placed in the reare sometimes:

Of placing in the front there are also examples. The Lacedæmonians at the battaille of Leuctra against the Thebans placed their horse before their Phalange, and tried their fortune with them, and were beaten, before the foote was engaged. The Persians at the River Granicus, esteeming their Horse to bee their chiefe strength, opposed them vpon the banks against Alexander, that was to passe over, and embattailed their foote behinde the horse. And Alexander encountered them first with his Horse, before his foote could get over: One example more I will adde to shewe the reason, why Horse are sometimes placed before the front of the Phalange of foote. Eumenes being to fight against Craterus and Neoptolemus, both greace generalls, that had served under Alexander in all his wars, ordered the fight thus: Because hee vnderstood, that their Army consisted of twenty thousand foote, the most parte Macedonians renowned for their valour, and skill in fight (In whom they set their greatest trust) and of more then two thousand horse; and knewe his owne foote, albeit they were as many in number, yet all to bee ramasses of diuerse kinds of people, and that his owne horse were five thousand, with exceeded the enemy both in number, and valor, hee determined to hasard the battaille vpon his horse, before the two Phalanges of foote should come together: Advancing therefore with his horse farre before his

^a Livy deca. 8. lib. 8. c. 25.

^b Xenoph. hist. lib. 4. c. 19.

^c Plutarch in vita Alexand. c. 14.

^d Plutarch in vita Eumenes. Diol. Sicul. lib. 30. c. 40.

his foote, hee tooke the right wing himselfe, and gaue the left to two strangers, to Pharnabarus a Persian the sonne of Artabazus; and to Phenix a Tenedian: Craterus stood in the right wing of his owne horse, and placed Neoptolemus on the left. And seeing the enemies horse comming forward, with greate fury charged them first, and fought brauely. But his horse failing vnder him, hee fell to ground, and it being not knowne, whoe hee was by reason of the medly, and throng of those, that gaue backe, and fled, hee was trampled vnder foote, and ended his life after a strange manner. By his death the enemy tooke courage, and encompassing their aduersaries on all sides, made a great slaughter, and the right wing, after this manner, with might overpressed, and put to the worst, was faine to fly for succour to the Phalange of foote. In the left wing Neoptolemus stood directly against Eunenes, and the mutuall fight of eche bredde a greate emulation betwixt the *generalls*, and a seruent desire to come to hands. And being easely knowne, both by their horse, and other marks, they slewe one vpon another; and out of their single fight made away to a consequent victorie. And first they assailed one another with swords, and after fell into an vnlooked for, and wonderfull Monomachy, for being transported with anger, and mutuall hatred, quitting the raines of their bridles, with their left hands they eache seized, and tooke hold vpon the body of other, which hapening, and the horse continuing their careare, and springing from vnder them, they both fell to the ground, neither of them could wle arise by reason of the suddaine, & violent fall, and of the heavines of their armor. Yet Eunenes got vp first, and prevented Neoptolemus, striking him on the ham. The wound was wide, and his strength of footing thereby failed, & soe lay as one, that had noe vse of his legge, being not able to raise himself because of the hurt: notwithstanding, courage overcoming the weaknes of his body, hee lift vp himselfe vpon his knees, and hurt his aduersarie in the arme, and thighes, giving him three wounds. But none of the wounds were mortall, and they being yet warme, Eunenes with a second blowe hitting his necke, slewe Neoptolemus outright. Whilest these things were a doing the rest of the horse fell together. Many were slaine on either side: some therefore falling, other being wounded, at the first the daunger was equall. Afterward, when the death of Neoptolemus was openly knowne, and that the other wing was put to flight, euery one shifted for himselfe, & made towards the Phalange of foote, as to a strong wall of defence to saue himselfe. This was the issue of the battaile. Wherein Eunenes, placing his horse before his foote, because hee held them his strength, and with the trieng the hazard of the day, shewed him self, both in counsell, and action, a greate generall. And Craterus on the contrary side, albeit highly esteemed amongst the Macedonians, as one, that had with great sufficiency serued Alexander in all his warres, yet failed in iudgment, in that hee chose rather with his horse to encounter the stronger parte of his enemies forces, then with his Macedonian Phalange (which Eunenes himselfe feared) to trie his fortune. For as it is a point of forecast to knowe a mans owne advantage, and vse it: Soe it is noe lesse iudgement, to knowe wherein the enemy is stronger, and avoide yt. Eunenes did both; for hee used his owne horse, which were his strength, and brought to passe, that Craterus his Phalange did him noe good, in as much as they neuer came to fight. Craterus failed in both, in that hee neither brought his Phalange to fight, nor yet provided sufficientlie to encounter Eunenes horse; which exceeded his in valour, and number; so appeares both, that horse were placed before the front of the foote; and also the storie giues the reason, why they were placed there.

of

Of the number of the armed foote, of the light-armed, and of the Horse.

CHAP. VIII.

Now are wee to lay out, what number the armed-foote, the light-armed, and the Horse ought to bee, and how particularly ordered, and how vpon occasion the Battaile may speedely be transformed into diuers shapes, & formes, and what discipline vsed for the motion of the severall parts of it. Wee cannot with any probabilitee set downe a precise number of forces to be levyed. For as much as euery man is to proportion his lewie according to the importance and qualitie of the warre in hand. This yet must not escape vs, that such a number is to bee chosen, as will fit the diuers shapes, and transmutations of our Troopes. As if in case wee were to double, or to multiply, and manifoldly enlarge the length of the Phalange, or els to lessen, and drawe it vp into a narrower roome. For this cause choice is made of a number, that may be reparted into half continually, till you come to one. Hence is it, that most Tactics writers would haue a Phalange to consist of sixteen thousand, three hundred, eightie, and foure armed foote, and of half so many light-armed, and of half as many Horse, as light-armed. For 16384. may bee reparted continually into half, till you come to one. Therefore for prooffe, and Examples sake this number is admitted. And where wee haue allotted sixteen men to every file, the whole masse will arise to one thousand, twenty, and foure files.

Notes.

THE Chapter before spake of the parts and dimension, of the Phalange, and of the place of the armed, the horse, and light-armed. This treateth of the number that goeth to the Phalange. In choise of which number, Ælian saith consideration is not soe much to be had of multitude, as of fitness for service. For such a number as cannot aptly bee disposed of for fight, is rather meane of confusion, then of order without which no fight can be maintained: Therefore such a number is to bee chosen as will serue.

1 The diuers shapes, and transmutations of our Battaile. Every motion in the battaile makes not a Transmutation, or diuersitie of shape. In turning of faces to the one hand or other there is noe other shape of the Phalange, then was at first: As when turning his face any way, the same proportion of lineaments remaines that was in him before. Soe likewise in countermarch or wheeling after the Countermarche, or wheeling is done, every souldier if he keep his right distance, and remaine in file and ranke; hath the place hee had before: And soe noe transfiguration of length or of depth followeth. The motion then, that Ælian meane to make Transmutation, are Doublings: For whether you enlarge the length, or depth, of your Phalange; you straight induce another shape. A long-fronted Phalange, and a Horse differ much in forme. If you will make of the ordinarie Phalange a horse, you are to double your files soe often, as your thinke convenient for the length of your horse. Then if from the Horse, you would returne to the first forme, you are not to cease doubling Ranks, till you haue gained that forme: likewise if of your ordinarie Phalange, you would make a long-fronted Phalange, your rankes are to bee doubled, and by continuing your doubling, you may drawe out what length you will: And contrary

contrarywise, by due doubling your files againe, you come to the first forme: How much you double your Ranks, Soe much you take away from the depth of your Phalange; as on the other side, doubling of your files, diminisheth the length. For the purpose, your Phalange is sixteen deep, double your Ranks; the depth hath but eight men; double it once more, and it hath but foure. Soe is the Phalange consisting of foure ranks, & every ranke, hath foure thousand, and ninety six men in it: But the length is foure times as much as it was. In like manner doubling your files (which in Alians Phalange are a thousand, and twenty foure) the first doubling loseth five hundred, and twelue files and soe many remayne; the second seven hundred, and sixty eight, and two hundred fifty six remaine; and soe many men haue you in a ranke. But where the Phalange was but sixteen deepe, nowe in the second doubling it is become sixty foure deep: If you please to reduce it to the first forme, two doublings of ranks will suffice. Heere wee must understand that doubling ranks, is not to make twice soe many as they were before, but to giue twice so many men, to every ranke, as they had before by inserting the even ranks into the odd; as the second into the first, and the fourth into the third, and the sixth into the fifth, and the eighth into the seventh, &c. The use of doubling I will shewe in my notes upon the twenty nine chapter of this booke. Alian therefore would haue his Phalange, of such a number as may be reparted continually into halfe, till you come to one; which number hee saith to be sixteen thousand three hundred, and eighty foure. And he ariseth out of the Multiplication of one by two soe still doubling the product, till you haue made up the full number, of sixteen thousand, three hundred, and eighty foure. And as the Multiplication by two begets this number, soe it being diuided by two continually, it may be reduced at last to one: Which is the thing, that Alian aymes at. For the numbers, that haue not equall diuision by half, leaue some supernumerary men in the Phalange: (Which) in doubling will disorder both files, and Ranks: Every man acquainted with the lone countrie militarie exercise at this day, knoweth, that when there is an vneuen number of files, the odde file supernumerary brings a difference, and cannot be doubled in the sort as the rest are: As in five, seven, nine, eleuen, severall bodies of files. Two, six, eight, ten, may well be doubled, and become two, three, foure, five files a piece: but the fifth, seventh, ninth, eleventh, must be severed from the rest of the doubled files; and serue to noe purpose, being not matcheable in depth with the rest after their doubling. The same reason is of ranks: Now when Alian saith, that this number in a Phalange may be divided by half and reduced at last to one, wee must with all understand, that the file of the Phalange in such diuision, ought to be either of eight, or sixteen men a piece. For noe number under eight, except foure, or two (which suite not the depth, of a Phalange) nor betwixt eight, and sixteen, is diuisible by half, till you come to one. Noe nor above sixteen except it be produced out of the duplications of sixteen. A file of 12. comes nearest. And of that number was the file of Cyrus in Xenophon. Such a file notwithstanding by diuision of two staies at three, and can descend noe lower. Ten was the old file of the Grecians, and it was called Decas. And albeit after ward upon better consideration they enlarged the number of the file to twelue, yet they retained the name of Decas still. But ten receiveth but one diuision, and goeth downe ward noe further then five. The vneuen numbers under sixteen cannot be divided at all. Vnles by fraction. As thirteen, which if you will divide by halfe, the quotient will be six, and there remaineth an odde man over: of which number, if all the files of the Phalange should be, you should haue a thousand, two hundred, and sixty, which will receiue noe more, then two doublings without a fraction. If then the files be above sixteen, and under thirty two, you cannot divide them continually by half, but you must saile of the manner, that Alian speaks of. As for the number of sixteen thousand, three hundred, and eighty foure, albeit of it self, it is diuisible by two till you come, or ascend

a Xenop. Cyrop.
lib. 2. 43. B.

to 1, yet we must not consider it apart, as an abstract by it selfe, but as it numbeth, and is applied to the Phalange. In which respect, it giueth a 1024 files of 16 deepe, which files will still hold out the doubling, till you come to one file.

3 A Phalange to consist of 16384.] Alian (out of the most Tactick writers as he professeth) will haue the Phalange of sixteen thousand, three hundred, eighty and foure men. I haue noted before that a Phalange may be more, or lesse, than this number. But I take this to be the number of the Macedonian Phalange. * Appian seemes to testifie with me. thus he saith: Antiochus whole army consisted of 70000 men. Of Syriacis. 107. B. which the chiefe strength was the Phalange of Macedonians, containing 16000 men, ordered according to the forme, that Philip and Alexander had before vsed. He placed them in the middle, diuiding the 16000, into 10 equall parts, in euery of which parts was 50 men in front, and 32 in depth, and vpon the flanks of euery part 22. the shew of the Phalange was like a wall, of the Elephants like turrets: hitherto Appian. I haue translated He Phalanx, He Macedonon according to the word, the Phalange of the Macedonians, where the right meaning is, the Macedonian Phalange. For it consisted not of Macedonians, but was armed, and ordered, after the Macedonian manner. For how was it possible for Antiochus to wage, and haue in his seruice 16000 Macedonians, being neuer himselfe King of Macedonia, and the King, that then was (namely Philip the sonne of Demetrius) was his enemy, and in league with the Romans? Besides Appian hath in expresse words: the Phalange was armed, and ordered, according to the institution of Philip and Alexander: whose manner Antiochus might well reteine, considering he was lineally descended from Seleucus, the successor of Alexander in the kingdome of Asiria: And Seleucus had bene in the seruice of Alexander in the whole conquest of Persia. * Liuy saith also, they were armed after the Macedonian manner. Whereby a man may inferre, they were no Macedonians: Hee speaking of the same battaile (which was the battell of Antiochus against L. Scipio) hath thus: The Kings army was mingled of sundry nations, and diuers with diffimilitude of armes and aides. There were 16000 foote armed after the manner of the Macedonians. They were called Phalangites. This was the middle of the battell, and in front diuided into 10 parts, which parts were distinguished by placing 2. Elephants in each intervall. The battell had 32 ranks in depth. It was the principall strength of the Kings forces, and both with the other shew, and also with the Elephants, which were eminent amongst the Armed only, brought with it great terror. Liuy saith the 16000 were armed after the Macedonian manner, and were called Phalangites; Appian, that there were 16000 ordered and distributed according to the ordinance of Philip and Alexander. Liuy, and Appian, both agree, that there was 10 parts, and euery part seuered with interualls, and had 32 men in depth, which is the Macedonian file once doubled. Liuy speaketh not of the number of the length of the Phalange. Appian saith plainly there were 50 in front, of euery of the 10 parts, which amounts to 500: for 10 times 50 makes 500. Now if you multiply the length of the Phalange which is 500 by the depth, which is 32, you haue the 16000, whereof Liuy and Appian spake. But yet resteth a doubt, in the difference betwixt both these authors, and Alian. Liuy, and Appian, both giuing but 16000: Alian 16384 to the Macedonian Phalange. For Liuy, we are not much to insist upon him, who being a Roman (we may probably coniecture) was halfe a stranger, in the Art Tacticke of the Grecians, and that, which he wrote, he had from others; perhaps no better skilled in the same Art than himselfe. Appian was a Grecian (for so those of Alexandria in Egypt accounted themselves, after Ptolomy the first had established that Crowne in his family) and as his historie sheweth, well acquainted with the order the Grecians held in embat-
ling

b Liv. Decad.
lib. 7. 141. A.

ling their armies, and therefore we may the better rely upon his authoritie. Who albeit hee first affirmed the Phalange was of the number of 16000, yet after in numbring the depth and length alone, he findeth 16000: and further expounding his owne meaning he sheweth, there were more upon the flanks of the ten parts, into which the Phalange was divided. His words import: That Antiochus divided his Phalange into 100 equall parts, giuing every part in front 50 men, in depth 32; which being multipliea together, make up the 6000. He addeth; And in the flanke of euery part he set 22. If the meaning be, he set 22 upon each flanke of euery part, the parts being 10, and the flanks 20, the number will arise to 440, where Elia alloweth no more than 384. But if 22 were added to one of the flanks of each diuision, which also being collectiue taken are flanks in the plurall number, we shall come short and finde no more than 220. Yet whether sense of both you admit, it is plaine, that Appian attributeth more, than 16 thousand, to that Macedonian Phalange. And it may be, there is an error in the number of the 22, and that it ought to be written 32. For if Antiochus had giuen 32, as he gaue 22, to one flanke of euery part, and set 32 upon the uttermost flanks of euery wing to strengthen them, of the 12 times 32 had arisen the iust number of Elians Phalange, which number is the fittest, for vse, and for diuision of the Phalange in all doublings. The armed foote then, according to Elia, ought to be, 16384. The light armed.

4 Halleso many } The armed amongst the Græcians, were accounted the strength of the field, which was the cause their number was greatest. For you shall not finde in their battailes for the most part, that the light armed amounted to halfe the number of the armed: The fact of Cyrus sheweth what account he made of light armed: ^a Xenophon reporteth it thus: He led with him the Lydians, those whom he saw to take delight in Armes, horse, and chariots, and willingly doe, what they were commanded, he gaue armes to, of those whom he saw followed him against their wils, he gaue the horses to the Persians, that were his first companions in Armes. All that followed him vnarmed, he exercised to the sling, because he reckoned that weapon most seruile of all others. How much you increase the number of the light armed, so much you diminish the number of the armed, and by consequent so much weaken your field. ^b For the light cannot maintaine any stable fight, but in case of danger they are forced either to shew a faire paire of beeles, or else retire to the armed for succor: yet serue they for many uses ioyned with the armed. And the proportio that Elia setteth downe, namely to haue halfe as many of them, as there are armed, standeth to good reason, & vse. The Romans notwithstanding, were more sparing in their light armed, & allowed not above the 4th part of them, or litle more, to the armed. The Legion contained (saith ^c Polybius) 4200 footmen. Of these they chose 600 Triarians, 1200 ^d *h* statii, 1200 Principes, (which come to 3000) and the rest Velites, which were 1200. And the Velites were the same in effect amongst the Romans, that the light armed amongst the Græcians, albeit their arming somewhat differed. Elia before shewed, that the Græcian light armed had no manner of defensive armour, but offensive only, as bowes, darts, or pikes. ^e Polybius describeth the Armes of the Velites to be a Sword, a Parma, (which is a small Target,) and darts; the sword a Spanish sword, the Target a litle round Target, a foote and a halfe (for so Casaubon correcteth Tripedon) in breadth; the darts in the steale 3 foote long, and a finger thicke, and the head almost a foote long. And ^f Livy mentioning the skirmishes, that fell out betwixt the horsemen of King Philip of Macedonia, and Sulpitius the Roman Consul, compareth both the armies together, telling that either party had their light armed ioyned to their horse, and that coming to fight, the Romans had the better. So (saith he) neither the Kings horse, vnaccustomed to a stedfast fight, were able to match the

Roman

Roman horse, nor yet the foote skipping and leaping here and there, and almost halfe naked in their kinde of Armes, to be compared to the Roman Vels, hauing a Target, and a sword, and being armed sufficiently both to defend himselfe, and assaile his enemy. The number then of Elians light armed, ought to be 8192, and these being ranged behinde the armed 8 depe (so they are fittest for seruice) will make 1024 files, as many as the armed did.

5 Halte as many horse, as &c.] The horse are in number 4096, and proportioned to the foote (comprehending the light armed) as 1. to 6. The armed foot, and light armed together make 24576: the horse 4096. And this was ^a Alexanders proportion, when he moved first against Darius. For he had about 30000 foote, and 5000 horse, or not many more, as Diodorus saith. ^b Iustin giues him 32000 foote, 4500 horse. Yet this number held not alwaies amongst the Macedonians themselves; I meane Alexanders Capitaines, that possessed his kingdoms after his death. The reason may be, that in Ciuill warres they made their leuies, not as they would, but as they could. ^c In the battle betwixt Eumenes, and Craterus, (I speake of that battell before) Craterus had 10000 foote, & 2000 horse; Eumenes had 20000 foote, & 5000 horse. Craterus the proportion of 1. to 10; Eumenes of 1. to 4. ^d Antigonus fighting against Eumenes in Cappadocia, had in his Army about 10000 foote, and 2000 horse; Eumenes had as before. Antigonus horse were to the foote, as 1. to 5. ^e The same Antigonus fighting against Alceas, the brother of Perdiccas, had in his Army 40000 foote, and more than 7000 horse; the proportion well nigh of 1. to 6; Alceas had no more than 16000 foote, and 900 horse, sailing much of Elians number. ^f Antigonus in his second battell against Eumenes, had 28000 footmen, and 800 horse, which is 1. to 3. and halfe; Eumenes had 35000 foote, and 6000 horse, very neare Elians proportion. Many other examples are to be read in Diodorus. But (as I said) these are Ramasses proceeding not of chouse, but of necessity, which forced them to take such, as came to hand; as it alwaies falleth out in suddaine leuies. And it seemeth the number of horse (allowed to the foote by Elia) was King Philips proportion; considering Alexander used it ^g after he receiued his armie from Philip, who by premeditation, and fore-choise, had gathered it together with intent to invade Persia. And yet I finde ^h that Philip himselfe, when he fought against the Athenians and Beotians at Cheronea, had more than 30000 foote, and 2000 horse; which is 1. to 15: and in diuers other fights differed from Elia in the number both of horse, and foote. But the question is not, what was done, but was best to be done. And the number that Elia speaketh of, suites his Phalange best. For Philips device being to cast the horse into wedges of 64 horse a peece, and into 64 troupes; the greatest ranke of each wedge being 15, will in the rare equall the front of the armed, and of the light armed; not in number of files (for the files of the foote were 1024. and the greatest ranke of the horse, no more than 960) but in quantitie of place giuing to the horse, standing in their order of 6 foote betwixt man & man, the 128 cubits of surplusage toward the difference of the horses bodies, and toward the small spaces that are to be left, betwixt Troope, and Troope. ⁱ The Romans allowed a farre lesse rate of horse to the foote. In a Legion, according to Polybius his account, there were of Citizens 4200 foote, and 300 horse; of allies, and confederates 4200 foote, and 600 horse. In a Consular Army were 2 Legions of Citizens, and 2 of Allies, which came to 16800, a number not much differing from Elians Phalange of foote. Of horse 600, Allies 1200; in all making 1800; which cometh much short of 4096, (the number Elia alloweth to his Phalange) and holdeth proportion of about 1. to 9. The reason of this difference, may appeare in the fact of ^k Eumenes; who not much trusting his forces of foote against the Macedonians (accounted the best soldiers)

The Tacticks

of this age,) prepared himselfe a sufficient number of Horse with them to make a counter-balance against the Macedonian foote. And it hath bene the manner of Generalls of ancient time, if they trusted their Foote-forces, to make the lesse account of Horse: if they distrust them; to encrease the number of their horse.

The Romanes trusting to their foote, required the lesse number of horse. The Grecians had the greater number of horse, both for the cause before recited, and further because they had continuall warre with Barbarians, that placed their confidence in horse; as the Persians, and the inhabitants of the lesser Asia.

The names of the severall parts, and of the Commanders of the severall parts of the Phalange, and of the numbers under their commandments.

CHAP. IX.

THE files are ordered into bodies, which haue every one a proper name. For two files they call ¹ a *Dilochie* of thirty two men, whose Leader is tearmed *Lilochita*. Foure files ² a *Tetrarchy*, and the Leader thereof *Tetrarch*; hauing charge ouer 64. men. Two *Tetrarchies* ³ a *Taxis* of 128. men, and 8. files, and the Leader thereof hath the name of *Taxiarcha*. Two *Taxies* goe to ⁴ a *Syntagma* of 256. files, and 256. men; and the Leader thereof is called *Syntagmatarcha*. A *Syntagma* of 256. men is called of some a *Xenagy*, and the Commander *Xenagos*. In euery *Syntagma* of 256. are five ⁵ superordinary men, viz: ⁶ An *Ensigne*, ⁷ a *Reare commander*, ⁸ a *Trompeter*, ⁹ a *Sergeant*, and a ¹⁰ *Crier*. This *Syntagma* seemeth to haue ¹¹ a *Tetragon* all forme of 16. men in length, and 16. in depth. Two *Syntagmaes* make ¹² a *Pentecosiarchy* of 512. men, and 32. files, the Leader whereof is named *Pentecosiarcha*. Two *Pentecosiarchies* make ¹³ a *Chiliarchy* of 1024. men, and 64. files; and the Leader is called *Chiliarch*. Two *Chiliarchies* are called ¹⁴ a *Merarchy* of 2048. men, and 128. files, whose Leader is named *Merarcha*. Of some this part is called a *Telos*, and the Leader thereof *Telarcha*. Two *Telarchies* make ¹⁵ a *Phalangarchy* of 4096. men, and 256. files, the Commander whereof is called *Phalangarcha*. Yet some call it a *Strategy*, and the Commander *Strategos*. Two *Phalangarchies* ¹⁶ a *Diphalangarchy* of 8192. men, and 512. files. There are that tearme this part ¹⁷ *Meros* and it is one of the wings. Two *Diphalangarchies* make a four-fold *Phalange* consisting of 1024. files, and 16384. men. So haue you in the whole *Phalange* of armed foote two wings, foure *Phalangarchies*, eight *Merarchies*, sixteen *Chiliarchies*, thirty two *Pentecosiarchies*, sixtie foure *Syntagmatarchie*, one hundred twentie eight *Taxiarchies*, two hundred fiftie six *Tetrarchies*, five hundred twelue *Dilochies*, one thousand twentie foure files.

Notes.

HERETO haue bene shewed, the manner of arming, and leauing of Souldiers, filing, and the parts of files, ioyning of files, and ranking, the locall forme, and parts of a Phalange, the number of the armed, light-armed, and horse-men requisite to a Phalange. This Chapter contains, as it were, the matter, of which a Phalange is compounded; that is the severall bodies Militarie, ordred, and ioyned together, to make up the perfect forme of it. These bodies are many, and arise out of ioyning files by doubling still

Only the difference is, that a Tetrarch being a King, or a Governor, of
 both the government of the fourth part of the land, (for a Tetrarchy is the government of
 the fourth part) But a Tetrarchy in Aelian signifies a body military consisting of four
 parts (4. files) and the Tetrarch commands not over one alone, but over all the 4. parts.

3 A Taxis] As the word Tetrarchy is diversly taken, so is Taxis likewise. For
 sometimes it imports Order in a generall signification, as I noted before: Sometimes the

ly knowne for Kings. Theſſaly likewiſe was diuided into 4. Principalities, Theſſali-
otis, Pthiotis, Pelasgiotis, and Affiotis; whereof euery one was named a Tetrarchy.
Onely the difference is, that a Tetrarch being a King, or a Gouvernour, ſignifies him, that
bath the gouernment of the fourth part of the land, (for a Tetrarchy is the gouernment of
the fourth part) But a Tetrarchy in Aelian ſignifies a body military conſiſting of foure
parts (4. files) and the Tetrarch commands not ouer one alone, but ouer all the 4. parts.
3 A Taxis] As the word Tetrarchy is diuerſly taken, ſo is Taxis likewiſe. For
ſometimes it imports Order in a generall ſignification, as I noted before: Sometimes the
F 3

still their number, and haue euery one a seuerall Commander. The least is two files ioyned together, which is called a Dilochy; And because there are in Phalange 1024. files, there must also bee 512. Dilochies, which consist of two files a peece. If you double this body of two files, and make thereof a body of foure files, it hath an other name, and is called a Tetrarchy, of which Tetrarchies there are 256. in a Phalange. Double againe these 4. files, and make 8, the body is called Taxis. And these eight files, being doubled bring out the Syntagma of 16. files, which is a square number of men, 16. in the front, and 16. in the flanke. And so proceeding still in 6. doublings more, you come at last to the fourefold Phalange containing the number of 16384. men, and 1024. files. Now as in the Phalange there are 16. bodies out of these doublings, the Dilochy being the first, and the fourefold Phalange the last: So doth *Ælian*, appoint for euery body a Commander, who albeit they seuerally command, each his owne troupe, yet are they subordinately one vnder another, the lesser vnder the greater, till at last the souerainty of the command rest in the General of the Army. ^a The Dilochites are directed by the Tetrarches, the Tetrarches by the Taxiarques, the Taxiarques by the Syntagmatarches, the Syntagmatarches by the Pentecostarches, and they by the Chiliarchs, ouer whom are Merarches, and ouer the Merarches the Phalangarches, and ouer them the Commanders of the wings, or Diphalangarches, and the soueraine of the Armie or General is the highest, and last. The number of these Commanders a man would think were to no great purpose being in all (the 2. Diphalangarchies therein comprized) 1022, besides the file Leaders, which standing in the heades of their files, amount but to two men more; that is to 1024. For so many (as I haue said) are the files of the Phalange. But if the conueniency be obserued, it will not seeme impertinent.

^a Xenoph. Cyroped. lib. 8. 203. A.

^b For all the Leaders being in front, (therefore are they called Leaders, because they precede, and the rest follow,) it makes both a gallant shew, and that rancke being as it were, the edge of our battaile, not only serues to hew a sunder, and rent a peece the forces of our enemy: But also standeth as an assured bulwarke of defence before the rest of the Armie, that followeth. And it is well noted by ^c Leo, that the multitude of Commanders (in orderly diuisions) both signifies, that there are many worthy and valiant men in the armie: And is a meanes to keep the Souldiers in greater obedience, and to giue vndoubted effect to all directions. Of what qualitie and disposition, those Leaders ought to be, you may see in the ^d fourth Chapter of Leos Tactics. Onely I will adde, that as they are higher in dignity, so ought they in vertue and valour exceede those, that are vnder their command.

^b Xenoph. Cyrop. lib. 3. 85. C.

^c Leo cap. 4. § 13.

^d Leo cap. 4.

1 A Dilochy] Consists of two files; for so signifies the word Dilochia: and the Leader is called a Dilochite.

2 A Tetrarchy] Of foure files; and the Leader is called a Tetrach, one that hath the command of foure files. And here I must once more admonish, that in the words of diuers signification, we must not weigh, what is the proper signification, but how they are used in this Art, and booke.

For the word Tetrarch signifieth sometimes a King: as Hefychius hath: and ^a Deditarius in Tully is called a Tetrarch, and ^b Herode in the Gospell; who both are commonly knowne for Kings. Thessaly likewise was diuided into 4. Principalities, Thessaliotis, Pthiotis, Pelasgiotis, and Affiotis; whereof euery one was named a Tetrarchy. Onely the difference is, that a Tetrarch being a King, or a Gouvernour, signifies him, that hath the gouernment of the fourth part of the land, (for a Tetrarchy is the gouernment of the fourth part) But a Tetrarchy in *Ælian* signifies a body military consisting of foure parts (4. files) and the Tetrarch commands not ouer one alone, but ouer all the 4. parts.

^a Cicero in orat. pro Deditaro. c. Luc.

3 A Taxis] As the word Tetrarchy is diuersly taken, so is Taxis likewise. For sometimes it imports Order in a generall signification, as I noted before: Sometimes the

f Polyb. lib. 3. 225. B. & lib. 11. 639. E. g Xenoph. lib. 4. exp. lib. 4. 325. B. ex Cy. 102. lib. 2. 102. C. h Arrian. lib. 2. 35. E. h Polyb. lib. 2. 466. B. i Xenoph. Cy. 102. lib. 2. 41. D. k Polyb. lib. 3. 5. to mly. h. erat.

¹ order of a battaile: sometimes a company of any kinde of Souldiers, foote, or horse: as Taxis Peltastarum, Taxis Equitum; Sometimes a single Phalange, as in ^h Arrian mention is made of Taxis Oeni, Taxis Perdicæ, and Taxis Meleagri &c. who were Phalangarches, as the story sheweth. ⁱ Sometimes for all the armed, as Taxis Phalangitarum: Sometimes a rancke of men standing embattaile, as in Thucydides, who describing the battell of the Lacedemonians, saith the front (which he calleth the first rancke teen proteen Taxin) consisted of 448. But in a more speciall signification it is taken for a band of Souldiers. And in that signification the number varieth. ¹ In Xenophon, it comprehendeth a hundred men: What the number of the Athenian Taxis was, I finde not deliuered by any Writer. That they had Taxiarchs ^k Polyenus sheweth plainly. And if a man with leaue might gesse, I would imagine their Taxis consisted of 250 men: For I finde in the same place of Polyenus, that they had Chiliarchies, Pentecoliarchies, Taxes, and Lochagies. I haue before shewed, that Lochos in Xenophon is made sometimes of about 100. men. Out of which may be inferred with probability, that Taxis, being the next degree about the Lochagie, hath the double number, or more; The rather because a Chiliarchy hauing in it a 1000. the Pentecoliarchy must haue 500. and by likelihood the Taxis 250. as being the next office vnder the Pentecoliarchy. But whatsoeuer the Taxis of the Athenians, or of other people was, Ælian maketh his Taxis up with 128 men, and 8. files; which is a double number to the Tetrarchy. With whom Suidas agreeth, giuing 2. Tetrarchies to a Taxis: and saith it consists of 128 men. The Commander of the Taxis is called a Taxiarch, as the Commander of the Tetrarchy is a Tetrarch. Here I am to note by the way, that the Interpreter of Xenophon translateth Taxiarcha, the Commander of a Cohort; where Taxis in the straighter signification cannot be taken for a Cohort because a Cohort differeth much in number, hauing in it at the least 500. and odde men, where the Taxis, when it is greatest hath no more then 128. And ¹ Polybius saith plainly, that Spira is the Greeke word, that fully expresth the Romane Cohort.

p Suidas in μέσος.

q Suidas in Xenagos & Iul. Poll. lib. 1. cap. 10. r Polyb. lib. 1. 33. B.

4 A Syntagma] The word commeth of Syntasso, or Syntatto, to place together; and a Syntagma is a body compounded of many parts artificially put together. ^m But it may be taken for any body in the armie. ⁿ Diodorus reports of Dionysius the elder That after he had diuided his whole Armie, (which had in it 30000) into three parts, he employed two against the Carthaginian Campe in diuers manner: himselfe tooke the Syntagma, or third part, which consisted of mercenary Souldiers, and led against that quarter of the campe, which had the Engins. ^o Ælian also useth the word diuerslie; For he calles the whole armie by the name of Syntagmata, in the plurall number, and sometimes Syntagma in the singular. And further giues the same name to a file; ^p Suidas likewise describing the length of a Phalange, saith, it is the first rancke (Syntagma) of file Leaders, which stretcheth forth in a right line from wing to wing. Whereby appeareth that which the Logitians affirme, (which I touched before) that there are more things then names of things: And that fit names cannot be giuen to all. The names that haue bene giuen by antiquity, to expresse the severall bodies of the Phalange, are to be rescinded by vs, as proper enough to signifye the thing they meant. Neither are we to vary from them, vnlesse we our selues can inuent better. The Syntagma that Ælian here mentioneth, is framed of two Taxes, that is of 16. files, & of 256 men. The Commander of it is named a Syntagmararch. And where he addeth, it is called of some a Xenagy, we are to vnderstand that ^q Xenagos was he (amongst the Grecians) that had the command of a band of strangers, (as he that leuied strangers was called ^r Xenologos) and the band it selfe was called a Xenagy. Why the Syntagma should haue the appellation of Xenagy, I cannot diuine; vnlesse the reason were, because it was about the

number

number, wherof strangers made their companies, that serued amongst the Græcians. And I thinke, and shall till better information, that the body of the light armed called a Xenagy mentioned hereafter, had that name likewise for the same reason. Now of all the bodies in this Chapter mentioned, there is none that commeth so neere the companies used at this day, as doth the Syntagma, for (excepting that our numbers differre, and are in diuers places more, or lesse) the offices of each are alike. You haue in the Syntagma a Lieutenant, or Reare Commander; so in our Companies. In the Syntagma is an Ensigne, and an Ensigne-bearer; the like in our Companies. In a Syntagma is one Sergeant, our Companies haue more. The Syntagma had a trumpet, and our Companies for the most part haue two drummes. We onely want a Crier, which euery Syntagma amongst the Macedonians had. What the use and place of all the Officers was, I will straight discover.

5 Five superordinarie men;] Namely the Ensigne the Reare-commander, the Trumpetter, the Sergeant, and the Crier of whom we last spake. That which I translated, superordinarie, is in Greeke Ectactoi. ^r Suidas giues the reason, why they were so called: because (saith he, they were not numbered as part of the battaile, that is ordered in files & ranckes. ^s As Xenophon saith of Miriarches, Chiliarches, and Taxiarches, & other Commanders (whom Cyrus called to him) that they were not recounted amongst the militarie numbers, and might depart from the Phalange without altering the forme thereof. In the files they could not be, because they should so increase the number in the files, and make one longer then an other, and hinder doublings, and other motions; besides the deformity, they should bring in, in making the battaile vneuen: And a file of themselves they could not make. The like disorder would they bring in the ranckes, where they could not conveniently stand, vnlesse some body filed with them, being much short of a file of themselves. Besides their employment is to stirre here and there apart, as they are commanded: where they of files, and ranckes neuer moue single, but iointly, as shall seem good to their Commander. And albeit these five bee remoued from the battaile, yet remaineth the battaile without them entire of it selfe, and in perfect forme, as though there were no neede of them, when notwithstanding their use is otherwise so needfull that although the battaile may be, it cannot well be without them.

An Ensigne] Our use is to call the Ensigne-bearer an Ensigne for breuities sake; As a Drummer, a Trumme, a Trumpetter, a Trumpet; and that not absurdly. A distinction will easily appeare in common speech, by the application of words of circumstance to the one, or the other. The end why ensignes were diuised appeareth in ^t Diodorus Siculus, he giuing diuers reasons, why the Egyptians (whom he accounted the ancientest of men) were carried away with superstition of worshipping Beasts, after the manner of the Countrey, hath amongst other words these in effect: A second cause the Egyptians giue, because of old time being in diuers conflicts thorough disorder in their Armie, vanquished by their borderers, they had recourse to the inuention & bearing of Ensignes in their troupes. They say therefore, that preparing images of the beasts, they now worshipped, and fastening them to the ends of long staves, the Commanders caused them to be borne aloft; by meanes wherof euery man knew of what troupe he was. And seeing this good order auailed much to victorie, they conceiued, that the beasts were the cause of their safety. In recompence wherof they ordered, that none of these beasts should be killed, but be honoured with religious care and worship. Ensignes were then deuised for readines to direct souldiers in particular, whither to resort in time of fight. ^u Cæsar practise agreeth hereto: he telling of his owne souldiers disorder hath thus: Whatsoeuer part they came into by chance, and to what Ensigne soeuer, there they staid, least in seeking their

owne

u Cæsar. de bell. gall. lib. 2.

owne they might happily lose the time of fight. And ^{a Veget. lib. 2 cap. 13.} Vegetius enlargeth the cause ^{x Leo cap. 6. § 18. 19. 20.} wrung thus: The ancient warriors perceiving that in time of fight the order, and embattailing of an Armie was quickly brought in route, and confusion, to avoide this inconvenience, diuided the Cohorts into Companies, and appointed an Ensigne of euery Company. So that in the Ensigne was written, of what Cohort and of what number in the Cohort the Companie was. Which the souldier seeing, or reading could not estray from their Companions, though the tumult were neuer so great. * Leo also maketh this the vse of the Ensigne: VVee command also, saith he, that the heads of the Ensignes of euery Company or Band be of one colour, and that the silke of euery Turme, or Drunge, haue a colour by it selfe. And to the end that euery Companie may with ease know their owne Ensigne, other marks and tokens are to be added to the heads of the Ensignes, that according to Turmes, and Drunges, and Companies, they may be knowne. But in any case, let the Ensignes of euery Turmarchy be different one from an other, & cleare to be discerned, that the souldiers may know them ewen at a farre distance. His meaning, as I take it, is, that euery great body or regiment should beare in their Ensignes a (seuerall colour, and that the Companies of that body should likewise hold themselves to the same colour in their Ensignes: So notwithstanding that (as the vse is at this day) the Ensignes of euery Company should haue a seuerall marke to bee knowne by, besides the colour in generall. For so both the Regiment may be quickly discerned, and one Company with facilitie be distinguished from another. What the forme of the Ensigne was, we may out of the former place of Diodorus see: The Egyptians, saith he, counterfeiting the shape of those Beasts, which they worshipped, fastened the Portraict to the end of long stauces. * Xenophon testifies the like of the Standard of Cyrus. Cyrus (saith he) commanded his army to cast their eyes vpon the Standard, and to follow it with equal pace, and in order. The Standard was a golden Eagle stretcht out vpon the end of a long staffe. Which Standard is at this day the Standard of the Kings of Persia. The Ensigne was nothing else, but the figure of some beast aduanced high vpon the end of a long staffe. As of an Eagle, of a Wolfe, of a Horse, and such like; and sometimes they added peeces of coloured silke fastned vnder these images to make a greater difference betwixt the Ensignes. Whether our Ensignes at this day, made of manyells of Taffaty, or the ancient Ensignes of the Græcians (I may also adde of the Romans, for they obserued the same forme) are the better for vse, I will not now dispute. I may notwithstanding freely say, that the stronger reason weigheth for the Ancient. For besides the authoritie of such excellent wits, as they were, and so exquisite in their invention, the reason of the lightnes is to be preferred: Besides the winde hath no such force ouer them, and they neither hinder the Souldiers, that stand next by entangling, nor by flapping in their faces, nor take away the sight of such things as are to be obserued and regarded in the field. For the matter whereof the Ensigne was made, * see Iustus Lipsius in his Commentaries to Polybius. As for the armour of the Ensigne-bearer (especially the Ensigne-bearer of the armed) I take it (for I haue no authoritie therein) that he had the same defensiuē Armour, that the Souldier which fought vnder the Ensigne had (excepting the Target) both to assure himselfe from the flying weapons of the light armed, and from the pike and sword of the armed, in case the battaile were entred and pierced as farre, as the Ensigne. For it was no reason, he should carry a Target, lest both his hands should be bound, the right with the Ensigne, the left with the Target; and so he haue no vse of either against the enemy. And in the left hand I would giue him a speare, or iavelin, (not a pike, which cannot be wielded with one hand) for his owne defence, and so offend the enemy. Which weapon, I haue read Ensignes

y Xenoph. Cyrop. lib. 7. 172. D.

z Lipsius ad Polyb. lib. 4. Di. log. 5.

signes of ancient time did beare. What the Ensignes place was, whether in front, or in the midst of the Battaille, I see it controverted. * Patricius absolutely affirmeth, that the Ensignes were placed in the midst of the front, and had 8 files on the right, and 8 on the left, to the end they might be seene, and followed by all. That Ensignes were first inuented to be a marke of seuerall bodies military in an Army, I haue before shewed. But it followeth not thereof, that they were placed in the front in time of fight. For being in the middle, they no lesse gaue notice, what the body was, than in the front. The reason of following is of lesse force; Inasmuch as the Souldier well knoweth whom to follow, though he had no Ensigne at all, the Commander alwaies with his motion giuing him direction, when to advance forward, when to turne his face to the right, or left hand, when to countermarch, when to double, and when to vse all other motions military. And the Souldiers followed after. So that the Ensigne, in regard of following, neede not to be in the front. * Yet in exercising the troupes, and in marches, I finde, that the Ensigne was in the front, together with the Capitaine, Crier, Trumpeter, and Guide. I take the reason to be, because being in the midst, and hauing neither file, nor ranke with the rest, they might happily bring a confusion, and be a hinderance to the changes, and diuers figures of the Battaille. When the time of fight was, the Ensigne retired to his place, that is to the midst. For so ^h Leo interpreteth himselfe in his precept of closing files: which must be done, saith he, not onely by File-leaders in front, Commanders of file, and Bringers-up in the Reare, but in the midst also, where the Ensigne standeth. And I rather agree to Leo herein, because I see, it was the manner of the Romans also, to place their Ensignes in the midst of their Maniples. * From whence came the appellations of Antesignani, Souldiers that stood before the Ensignes, and Postsignani, that stood behinde. Besides the Ensigne being in the front, the Ensigne-bearer may soone get a clap, who falling the Ensigne goeth to ground, and is in danger of loosing; which was the greatest disgrace among the Romans, that might befall. Lastly, * Ælian himselfe in plaine words placeth the Cornet of horse farre from the front. For speaking of the ordinarie Horse-troupe, he saith it is to consist of 64 horse, the first ranke of 15 horse, the 2 of 13, the 3 of 11, the 4 of 9; descending still, and diminishing 2 horse in euery ranke, till you come to one. He addeth; he shall carry the Cornet, that standeth in the second ranke next the ranke-Commander on the left hand; which ranke is the second ranke, himselfe declareth, making the ranke of 15 the first, the 2 the 13; which is the 7th from the front, and next the reare but one. If the Cornet haue no place in front, why should the Ensigne, considering both serue to one vse, and the reasons of seeing, and following are equall to both? And albeit ¹ Suidas place the Ensigne, the Crier, the Trompet, and Sergeant, before the Battaille, the Lieutenant in the reare, he is notwithstanding to be understood, of the times of marching, or of exercise, which I noted before. For what (should that Rable of vnarmed (being 4 in euery Syntagma, and in the whole Phalange 256.) doe in the front in the time of fight, but onely pester the chof. n of the Armie: who therefore haue the front, that they may make speedier way into the enemies battell?

7 A Reare-commander] Was the same that a Lieutenant is with vs. He commandeth the Souldiers in the Reare, no lesse then the Syntagmatarch in the front, and had his place in the Reare. What the duty of a Reare-commander was, I haue shewed out of ^m Cyrus words in Xenophon. And ⁿ Ælian afterwards setteth it downe most plainly. He was armed, as the rest of the armed of the Syntagma, namely with Pike, and Target, and with such other armes, as I haue described in my notes vpon the second Chapter.

m Xenoph. Cyrop. lib. 6. 167. E.

n postea cap. 14.

8 A Trumpet.] *The invention of the Trumpet is attribut. d to Tirhenus Hercules sonne. But the different use of these officers is worth the noting out of.* Suidas: The Crier, saith he, serueth to deliuer directions by voice, the Ensigne by signall, when noise taketh away the hearing of the voice: the Trumpet by sound, when thorough thicknes of dust a signall cannot be discerned: The Sergeant to bring such things, and dispatch such messages, as his Syntagmatarch commands. So that these officers were held all necessary for a Company, the one supplying the defect of the other, and seruing for use when the other failed. The Trumpet then was to be used according to Suidas, when neither the Crier, nor Ensigne could doe service. With the Trumpet was the signall giuen for the Campe to remoue, for the Campe to lodge. By the Trumpet the Souldiers were taught their time to fight, their time to retreat. The Trumpet set and discharged the watch. From the Trumpet came the measure of the Marche, and the quicknes, and slownes of Pace. In brieue, the Trumpet did all the offices, that the Dromme doth with vs at this day. Whether the Trumpet or Dromme, are of most use in the field, I may not now dispute. Onely I will say that the Græcians and Romans the most expert and iudicious Souldiers, that euer were, held themselves to the Trumpet, and neuer used the Dromme. The Dromme was first invented by Bacchus, who, as Polyenus reporteth, fighting against the Indians, in stead of Trumpets, gaue the signall of Battaille with Cymballs and Drommes. From him it came to the Indians, who used it altogether, as Curtius noteth in the battell betwixt King Alexander the Great, and Porus. The Dromme of Parthians is described by Plutarch in the life of Craßus; and by Appian. And Leo saith, the Saracens, who invaded Christendome, and infected the Turkes with their superstition, ordered their fights by the Dromme. From this Easterne Asiaticall people it was brought into Europe; and now the generall custome is among all European Nations, that the foote haue Drommes in the field, the horse Trumpets. And yet for the Trumpet, I cannot say, that all the Græcians held themselves precisely vnto it. Plutarch much commendeth the Lacedemonian manner of ioyning with the enemy, and writeth it in this sort: When the King hath offered the Goate (that was the Lacedemonian sacrifice, when they were to giue battaille) hee straight commands all the Army to crowne their heads, and the Flutes to sound the measure of *Castor*: And himselfe withall beginneth the *Pæan*; (the song they used when they were to charge) and advanceth first against the enemy. So that it is a braue, and no lesse fearefull thing to behold them pacing according to the measure of the Flute; neither dissoluing their order, nor shewing any astonishment of minde, but mildely, and ioyfully approaching the danger of conflict, diuiding out their Marche to the sound of the instrument. For it is not likely, that men so demeaning themselves, can be transported with feare, or choler. Nay rather they must needs haue a seled minde full of hope, and assurance, as if God were present on their side: thus Plutarch. Out of whose words it is cleare, that the Lacedemonians used no Trumpets in fight, but Flutes, and made them their instruments to daunce, as it were, the measures of warre by. For they used an esse, and slow pace, framed to the cadence of the sound; which may well be resembled to the solemne measure, in dauncing. Athenæus rehearseth out of Herodotus, that the Lydians used the like. But he addeth, that the Cretans made choice of the Harpe for their instrument of warre; as though it had bene peculiar to that nation. Pausanias testifieth the like of the Lacedemonians. Polybius geeth not so farre, but affirmeth onely that the Cretans, and Lacedemonians in stead of Trumpets brought in Flutes, and measures into the warre. And if it were so that the Lacedemonians used Harpes, it is like, they took them from the Cretans. For I finde

in Plutarch, that Lycurgus brought many of his Lawes from Crete, and had great familiarity with Thales the Cretan, whom he also sent to Lacedemon, to make an ouerture for the establishing of his lawes, that were then newly finished. Yet Diodorus Siculus reporteth, that the Lacedemonians used also Trumpets in their Battailles. He writing of a fight that was betwixt the Thebans, and Lacedemonians vnder the leading of Agesilaus; useth these words in effect: There was a strong fight betwixt them a long time, and at first Agesilaus had the better; but afterward, when the Thebans issued out of the City at all hands, Agesilaus seeing the multitude, caused the Trumpet to sound a retreat. The signe of retreat here, was giuen by Trumpet, and it seemeth the Lacedemonians had the use both of Trumpet, and Flute. Of the signalls, such (I haue before noted) as the rest of the Græcians gaue by Trumpet. The place of the Trumpet in the time of the Battaille was within the Phalange by the Ensigne. Thucydides placeth the Flutes of the Lacedemonians within the battaille, where they can finde no roome, vnlesse they stand by the Ensignes. And albeit Polienus saith, the Flute led the Army, and went before, yet that is to be vnderstood in the marche. For in case of a Marche, or exercise, Leo also giueth the Trumpet place by the Capitaine in front. When the fight commeth, he retreateth himselfe to his place in the Battaille with the rest.

9 A Sergeant.] *The word Hyperetes signifieth a Miniſter, (which is all one with the French word Sergeant, as appeareth by the interpretation of our Law is selfe, wherein the Sergeants, next degree to Iustices, are called seruientes ad legem. I reſerue therefore the name of Sergeant, because it is familiar amongst ſouldiers. And a Sergeant hath the ſame office in our Warre that Hypenetes had amongst the Græcians. What his duty and ſervice ſhould be, is declared out of Suidas. There were of these officers, as well among the horse, as the foote, as appeareth in Xenophon. The estimation and worth of their places is expreſſed by the ſame Xenophon. Cyrus held the Sergeants in warre, saith he, worthy of no lesſe honour, than meſſengers, and Embaſſadors in peace. He conceiued that they ought to be truſty, ſkilfull in matter of warre, vnderſtanding, quick, ſwift, induſtrious, and voide of feare; beſides endued with all qualities requiſite in the beſt ſort of men; & that they were to accuſtome themſelues to reſuſe no manner of ſervice, but willingly vndergo whatſoeuer is laid vpon them by their Commanders. Theſe Sergeants attended their Commanders in Marches, and other times, ſaue onely when Battaille was to be ioy- ned, and alwaies expected his command. During the fight, they retired to ſome place, where they might bee ready at call; for (as I ſaid before) they could haue no place in front.*

10 A Crier.] *Concerning the office of a Crier, Suidas hath taught vs, that he was to deliuer the Commanders pleaſure by voice. Leo calleth him Mandator, from the Latine word, because he ſignified to the ſouldiers, Mandata, the commandments of the Capitaine. In exerciſe he ſtood at the head of the Troupe, taking from the Commander the words of direction, and making, as it were, proclamation of them to the ſouldiers; and ſerued often, when neither Trumpet, nor ſignall might be giuen; he was otherwiſe alſo of great uſe. For in all buſines which required diſtinct ſignification of any ſudden alteration in the Armie, the Crier had his part alone. Xenophon telleth in the Græcians returne out of Perſia, that Clearchus their Generall led them not againſt the enemy, both because their courages began to fall, and alſo because they were all the day faſting, and it grew ſomewhat late. But yet hee turned not out of the way, leſt he might ſeeme to flie; but holding on right forward, he came with the vantgard*

b Leo cap. 4.

c Xenoph de
exped. Cyri
lib. 2. 277. B.

vantgard, to the next Villages by sunne-set there quartered; The very timber of the houses of some of those Villages was broken downe, and carried away by those of the Kings armie. The first therefore lodged themselves reasonably, the last being be-nighted every man tooke vp his lodging as it fell out, and made a great noise, calling one after another, so that the enemy heard it. Whereby it came to passe, that the next of them fled out of their tents. This appeared the next day, for neither was there carriage-beast, nor Campe, nor smoake neere at hand to be seene. The King also was terrified as it should seeme, with the accessse of the Armie. Which he declared by the next daies worke. Yet in the processe of night a teare sealed the Gracians themselves: and the tumult, and hurleburly was such, as is wont, when men are possessed with feare. Clearchus in this distresse commanded Tolmides the Elæan (whom hee then had with him, the best Crier of those times) after silence, to make proclamation, that the Commanders signified generally, that whosoever could bring forth the Author of this tumult should haue a talent of siluer for his paines. After this proclamation made by the Crier the Souldiers perceiued, that their feare was vaine, and that the Commanders were in safety: Hetherto Xenophon. By which narration may appeare, that the Crier performed that, which neither Trumpet nor other signall could doe, the terror rising in the night (which is the time of confusion and disorder) and neither could the Trumpet giue any certaine sound to remedy the perill, nor any other signall be discerned by reason of the darknesse; and this service was done by the Crier amongst his owne folke. His seruise against the enemy is declared in the fact of Cleocrytus the Athenian Crier who after the fight, betwixt Thraſybulus and the 30. Tyrants (wherein Critias and Hippomachus were slaine) with a proclamation to the Citizens, reconciled them to Thraſybulus, and was cause that the Tyrants were deposed, and had their authoritie abrogated by the people. The like seruise was done by a Crier in the behalfe of the Gracians against the Persians, about the time of the battaile of Plataeæ. The storie is this: When the Gracians vnder the conduct of Leotychides, the Lacedæmonian, and Xanthippus the Athenian, had gathered a flecte of 250. Gallies together to the end to deliuer the Ilanders, and the Citties of the Continent of Asia the lesse, out of the seruitude of the Persians, they sailed out of Delos. The Persians then remained at Samos. But hearing of the approach of the Gracians, they left Samos, and put ouer to Mycale a City of Ionia. And because they perceiued their shippes vnfit for fight, they drew them on land, and fortified the place, where they landed, with a wooden wall, and a deepe trench. Neuerthelesse they sent for foote forces, from Sardes, and other the next Cities, and assembled to the number of a 100000 men; And made prouision for all things necessarie for warre, therather, because they suspected the Ionians would reuolt. Leotychides hauing put his flecte in order, failed towards the Barbarians, that were in Mycale, and dispatched away before a shippe, wherein was a Crier, who had the shrillest voice in all the Armie. Him he commanded to saile vp close to the enemy, and to proclaime aloude, that the Gracians hauing overcome the Persians at Plataeæ, were now come thither to deliuer and set free the Gracian Citties of Asia. This was done by Leotychides to the end to dissuade the Asian Gracians from the Barbarians, and to raise a tumult in the enemies Campe. Which also came to passe. What seruise could bee of more importance, then to set a dissension betwixt the enemies? It was done by the voice of a Crier. More examples I could alledge, but these may suffice. The Criers place was alwayes to attend the Commander in the head of the Troupes, vnlesse in the time of fight; at which time his voice could not be heard but gave place to the noise of Trumpets and clashing of armor.

11 A Tetragonall forme] That is of foure equall sides, or foure square; But we must understand (which Ælian after teacheth) that there are two kinds of Tetragonall, or square bodies military, one in number, the other in figure. In number, when the front, and flankes of the body haue either of them as many Souldiers, as other; as the Syn-tagma hath 16. in front, and 16. in flankes. In figure, when the number of the front is greater, then the number of the flankes, and yet front and flankes stretch out an equall length of ground; as in the squares of horse, whereof Ælian speaketh hereafter. This last square is at this day called a square of ground, because the space of ground, which containeth the length of the front, stretcheth out iustly as far, as the space of ground, which containeth the depth of the flankes. It is caused by the difference of distance, which is betwixt the Souldiers in front, and betwixt the Souldiers in flankes. In front, being closed to fight, the distance betwixt Souldier, and Souldier, is but a cubite; that is a foote, and a halfe. The distance betwixt souldier, and souldier, in flankes is two cubits, or three foote, yet maintaine the trueneesse and eueneesse of the sides of the figure; that is the length of the line, which measureth the front, and flankes, shall be all one.

Ælian. cap. 18.

12 A Pentecostarchie] The word is a command of 500, and that was sometimes the number. In the Macedonian Phalange, it comprehendeth a 512 men. The cause of difference is the difference betwixt the file of the Macedonians, and the file of the ancient Gracians (whereof I haue spoken before) the odde 12 men coming in by the fifth doubling of 16. And the number being so neere 500, though somewhat above, the name of Pentecostarchie is still retained, because it was then in use, and no other more fit could be found.

13 A Chiliarchie] The command of 1000 men according to the name; Ælian giueth it a 1024 from the doubling of 512. The Tribunes of the Roman Legions are by the Greeke Historians termed Chiliarchs; yet is there a great difference; for the Chiliarchs haue no more command, then ouer their Chiliarchy consisting of 1000 men, and sometimes of more, as here in Ælian of 1024. But every Tribune had in his turne the command of the whole Legion. And againe there being 12 Tribunes, to every Legion (which at first had in it 3000, afterward 4000, then 5000, and in the time of Vegetius 6000 men) he should a Tribune be called a Chiliarch and be a Leader of a thousand, there being in the legion but 6000 men at the most, and yet 12 Tribunes; so that euery one could not haue, about 500 for his command; and in Polybius time, (the legion being but 4200) not about 300 and odde. But the Roman manner of warre and ordering of troupes, differed much from the Gracians; and the Gracians in terming a Tribune a Chiliarch, tooke the next word, and most significant amongst them to expresse the charge of a Tribune. Our Coronells, for their command, of a Regiment come neerer to the Gracian Chiliarchs; yet ours differ in that they haue Companies in their owne Regiments, which the Gracian Chiliarchs had not, and where Q. Curtius saith, that a Quint. Curt. it seemeth to be otherwise. For as I finde this in no other Author, so finde I, that Chiliarchs were long before Alexanders time. Xenophon reporteth, that Cyrus so encouraged his souldiers to be valiant, promised to the Taxiarchs to make them Chiliarchs, to the Lochagi to make them Taxiarchs, to the Decharchs to make them Lochagi, to the Pempadarchs to make them Decharchs; And that Cyrus made Chrysanthas a Chiliarch of horse in regard of his worth, and forwardnesse in seruice. And afterward he calleth Phranuchus, and Asiadatas, Chiliarchs of horse, and Artabatus and Arrageras Chiliarchs of foote. Polyenus witnesseth that in Iphicrates his time the Athenians had Chiliarchs, and Pentecostarchs, so that the institution of

of Chiliarchs could not be referred to Alexanders being at Babylon, considering it was in use before; And ^a Arrian reporting the same story, saith not, that Alexander first brought up Chiliarchies there, but that he ordained two Lochi in every horse troupe (where to that day there had been none) and two Lochagi to command them. Indeed ^b Diodorus Siculus writes thus concerning a Chiliarch. Antipater, saith he, lying upon his death-bed declared Polyperchon Protector of the Kings (being the eldest of those, that had served Alexander in his warres, and much honoured of the Macedonians) and his owne sonne Cassander the Chiliarch, and second man in authority. The place and institution of the Chiliarch first grew to name and honor under the Persian Kings. So writes Diodorus of this Chiliarchy which Antipater bestowed upon his sonne Cassander. Which notwithstanding seemes much to differ from the common Chiliarchy of the Phalange, where Curtius speaks. For Diodorus saith, he was next to Polyperchon in authority. Where in the Phalange there were many Commanders, namely, the Merarchs, the Phalangarchs &c. above the Chiliarchs. Adde that he saith, the institution of this Chiliarch came from the Persian Kings, when the Chiliarchs of the Phalange had their beginning from the Græcians, and were ordinary in Phalanges, as I have shewed. Lastly where Diodorus reporteth, that it had the increase and advancement of honour from the Persian Kings, he sheweth plainly, it was not Alexanders invention. And the same Diodorus speaking of the death of Ochus King of Persia telleth, that he was poisoned by Bagoas his Chiliarch in the time of the reigne of Philip, Alexanders father. This Chiliarch then I take to be the same, that the Generall of an armie is with vs. And I can hardly be perswaded, that Antipater would bequeath a lesse place to his sonne Cassander.

14 A Merarchy] The command of a part or halfe; for a Phalangarchy consisteth of two Merarchies. So that a Merarchy is halfe the Phalangarchy, and containeth 2048 men. This part is also called Telos, of which I have spoken in my notes to the seventh Chapter. And yet the word Telos is not alone used in bodies of foote. For ^c Thucydides speaking of the fight by sea betwixt the Corcyraens, and Corinthians, telleth, that the Corcyraens gave the right wing to ten Athenian shippes, and hauing of their owne a 100 and 10 shippes, diuided them into three Tele, euery of which was commanded by one of their Generalls: so that Telos there signifieth not a certaine number of ships, but a part of their fleet diuided into 3. & the Commanders of the Corcyraens are called Strategoi.

15 A Phalangarchie] The command of a single Phalange. Of this kinde were the ^d Phalanges in Alexanders armie (as I take it) which were led by Cænos, by Perdicas, by Craterus, by Amyntas, by Ptolomy, by Meleager, and other, as Arrian hath; Before Philip and Alexander gathered those forces together, wherewith Persia was subdued, the armies were of smaller number amongst the Græcians. Neither was it in many Cities might to raise 4096 men; which go to the Phalangarchy of Ælian: If any did, they might well call it an armie (Strategia, and the Commander Strategos) and the name of Strategos, or Generall was usually given to him, that commanded in chiefe ouer an armie (though small) sent out by any Citty to warre. So then, as the Generall was called Strategos, a Phalangarchy might also be called Strategia. I have before noted, that the sections of the Phalange are limited, and laid out by the Phalangarchies. And where there are 3 sections in a Phalange, the middle section is in the midst of the 4 Phalangarchies, 2 Phalangarchies lying on the one side, and 2 on the other. The 2 other sections are one betwixt the 2 Phalangarchies of the right wing, the other betwixt the two Phalangarchies of the left wing, for betwixt euery Phalangarchie was a space or section.

16 A Diphalangarchie] The command of two Phalangarchies; this was one of the wings. Ælian giueth it no Commander ordinary, neither doe I remember, that I haue

haue read Diphalangarchs of Diphalangarchia, as Phalangarchs of Phalangarchia, Tetrarchs of Tetrarchia. Yet was there one, alwaies that commanded the wing, appointed to that place extraordinarily; So ^a Philip, at the battaile of Cheronæa (where he overthrew the power of the Athenians, and Thebans, and their Allies) took he one wing to himselfe, and gave the command of the other to Alexander his sonne being then but young. And ^b Alexander at Granicus commanded himselfe the right wing, and appointed Parmenio to the left. So in the battailes against Darius at ^c Issos in Cilicia, and at ^d Gaugamela in Syria.

17 Meros] Meros is a part by diuision, coming of the verbe, meiro to diuide. And as before, Amerarchie, was halfe a Phalangarchie, so here Meros is halfe the fourfold Phalange. Each then signifieth halfe, but to distinguish them, the one is called a Merarchie, that is a Commande of halfe, the other Meros, that is halfe: A distinction sufficient to know the one from the other. Two of these Meros make the Phalange consisting 16384 men. And these are the bodies militarie, which Ælian in this Chapter describeth, and which were in use amongst the Macedonians. The other Græcians used other bodies in their armies. The ^e Lacedemonians diuided their whole city, into fixe bodies, horse and foote, euery one of which was called Mora, or Moira. Their Generall was one of their Kings, for they had alwaies two. Euery Moira, had a Polemarch (not much differing from our Coronells) foure Lochagie, eight Pentecosteres, and sixteene Enomotarchs. What the number of the Moira was, is uncertaine, by reason of the secrets the Lacedemonians used in their government, as ^f Thucydides saith. Plutareh reporteth, that Ephorus the historian, giueth 500 men to the Moira, Calisthenes 700. Polybius and others 900. ^g Diodorus Siculus, agreeth with Ephorus, and alloweth but 500 to the Moira. And ^h Xenophon numbrell the Moira of the Lacedemonians, which Iphicrates, defeated hard by Corinth, to haue been about 600 men. ⁱ See the Scholiastes, of Thucydides, for the exact number of these bodies. The ^j Athenians had their Chiliarchs, Pentecosiarchs, Taxiarchs, and Lochagie, as I haue said before. And with them were the Lochagi last, where with the Lacedemonians they were next the Polemarchs, but the number of the Lochos was not alike, as I haue likewise shewed before. Cyrus in ^k Xenophon hath these orders militarie, Myriarchs Commanders often thousand, Chiliarchs of a thousand, Taxiarchs of a hundred, Lochagi of twentie foure, Decadarchs, called sometime Dodecadarchs of 12, Pempedarchs of office, which are also called Hexadarchs. ^l Vrbicius differeth not much from Ælian, save onely in the number of the file, and the Officers of the file. For where Ælian hath sixteene to a file, Vrbicius hath but ten: and Vrbicius alloweth but two Commanders to the file, the File-leader, and the Bringer-up Ælian foure; the foure Enomotarchs. For the number of the Officers, in the Phalange they agree. And yet the names are not all one. Ælian beginneth with a Dilochite commanding two files, thirtie two men, Vrbicius with the Lochugos, who likewise commandeth two files of his, and fine men more, namely 25 men. The next in Ælian is a Tetrarch ouer sixtie foure men, in Vrbicius a Pentecostarch ouer fiftie men. Vrbicius hath next a Taxiarch, a Syntagmarch, a Pentecosiarch, a Chiliarch, a Merarch, a Phalangarch: And so hath Ælian. The next in Ælian is a Diphalangarch, Commander of 8192 men; Vrbicius termeth him a Myriarch that is the Leader of ten thousand men. The Tetraphalangarchie is left in Vrbicius. But Vrbicius assigneth no more, then 16 thousand to his Phalange, Ælian 16 thousand 384. Iulius Pollux thus diuideth his bodids, a Myriarchie, a Chiliarchie, a Taxiarchie, a Hecatontarchie, and a Lochagie. What a proportion Leo makes, is to be seene in the fourth Chapter of his Tactics. Because, he hath a mixture of the Roman and Greeke Orders, I remit the Reader to the booke.

The Tactics

So then *Ælian* hath in his *Phalange* of armed (besides the two *Diphalangarches*) 1020. Officers.

<i>Dilochites</i>	512.
<i>Tetrarchs</i>	256.
<i>Taxiarchs</i>	128.
<i>Syntagmarchs</i>	64.
<i>Pentecostarchs</i>	32.
<i>Chiliarchs</i>	16.
<i>Merarchs</i>	8.
<i>Phalangarchs</i>	4.
	1020.

I have set downe the figures of all the bodies described by *Ælian* as farre, as the *Phalangarchy*. The rest would have bene troublesome to insert as requiring more paper, then would stand with any reasonable proportion; neither are they greatly needfull. For two *Phalangarchies* joined in an even front, and in a convenient distance, will figure out a *Diphalance*; foure in an even front with a like distance will make the fourefold *Phalance*. So that thereby the forme of it will appeare.

The precedence, and dignitie of place in the offices of the *Phalange*.

CHAR. X.

The best of the *Phalange* Commanders is placed on the right wing, the second on the left wing, the third in valour in the right hand next the second *Phalange* toward the middle section. The fourth on the left hand next the first *Phalange* toward the middle section likewise. So the first and fourth *Phalange* haue Commanders of the first, and fourth worth: The second and third *Phalange* haue Commanders of the second and third worth. Now wee will shew by demonstration, that the first, and fourth worth, and valor, are equall to the second, and third; So that the Commanders in each wing are of valor alike.

The Leaders also of the feuerall *Merarchies* are thus disposed. The first hath his place in the head of the first *Phalange* on the left hand: The second on the right hand of the second *Phalange*: The third on the left hand of the third *Phalange*: The fourth on the right hand of the fourth *Phalange*. Also the Leaders of files in euery *Tetrarchy* are so placed, that the Leader of the first file hath preheminence in valor and place; the Leader of the fourth file standeth next him: Then the Leader of the third file, and the Leader of the second file last. For then are *Dilochies* of equall valor when the first *Dilochie* hath the first, and fourth Leaders, the second *Dilochie* the second, and the third Leaders in valor and reputation. For it appeareth in the *Mathematicks*, that, when there are *Analogies*, or answerable proportions of foure magnitudes propounded, that, which ariseth of the first, and fourth, will counteruaile that, which ariseth of the second, and third magnitude. And because there are foure *Tetrarchies* in euery *Syntagma*, wee may giue the Leaders of the *Tetrarchies* place according to the same proportion, as to place the *Tetrarch* of the first *Tetrarchy* on the right hand, giuing him the first place of worth; on his left hand the *Tetrarch* of the fourth *Tetrarchy* in the fourth place of worth. Then againe next him the *Tetrarch* of the third *Tetrarchy* in the third place of worth, and on his

left

of *Ælian*.

left hand the *Tetrarch* of the second *Tetrarchy* in the second place of worth. In like manner are the greater commands also to be proportioned.

Notes.

The former Chapter was of the Officers and of the bodies of the *Phalange*; this is of the place of euery one, according to his worth. And first wee are to note, that all the Commanders were placed in front of those, that they commanded; to the ^a *Xenoph.* *Cyrop.* lib. 3. and they might direct, and lead them as occasion should require. For ^b *Xenoph.* *Cyrop.* lib. 3. the *Lochagie* of the *Decadarchs*, or file Leaders, had care of the files, the *Lochagie* of the *Decadarchs*, the *Taxiarchs* of the *Lochagie*, the *Chiliarchs* of the *Taxiarchs*, the *Myriarchs* of the *Chiliarchs*: So in the *Phalange* of *Ælian* the file Leader had the command of his file, the *Dilochites* of the file Leaders, the *Tetrarchs* of the *Dilochites*, the *Taxiarchs* of the *Tetrarchs*, and so the rest, till you come to the Generall, who cared for all, directed all, and vnder whom all the Commanders were. The Generall hath bene placed sometimes in the right wing, sometimes in the midst of the *Phalange*. ^c *Vegetius* saith, that the Generall of the Armie is accustomed to be in the right winge betwixt the horse, and the foote. Hee addeth, this is the place, which gouerneth the whole battaile, from whence the salying out is most direct, and free. Therefore he standeth betwixt both, that hee might both gouerne horse, and foote with counsell, and with authority exhort them to fight. ^d *Xenoph.* *Cyrop.* lib. 7. ^e *Timolcon* in his battaile took his place in the right wing, betwixt the right hand point of the battaile, and of the horse, that were ranged in the wing; ^f *Alexander* the great, in his battailes took the same place; ^g *Timolcon* in his fight against the *Carthaginians* placed himselfe in the midst of the battaile. ^h *Diodorus Siculus*, saith, that, it is the manner of the *Scythians*, that the King should stand in the midst of the *Phalange*. The like doth ⁱ *Arrian* affirme of the *Persians*, and saith, that *Darius* had that place. ^j *Leo* also giueth the midst of the battaile to the Generall. And there placeth the battaile ouer which he would haue him to command. ^k *Leo* cap. 4. § 65. & 67. & cap. 12. § 68.

The best of the *Phalangarchs*] This ordering of the *Phalangarchs* the best on the right hand wing, the second on the left, the third next him in the left wing on his right hand toward the middle section: The fourth in the right wing on the left hand of the first toward the middle section thus, ¹ ² ³ ⁴ commeth out of a Geometrical proportion, which proportion giueth law to the ordering of the rest of the Commanders. The rule is this: 4. Magnitudes which equally exceede the one the other being compared together that which ariseth of the first, and fourth, is equall to that, which ariseth of the second, and third. As 2. 8. 14. 20. each exceedeth the other, 6. The addition of 2. to 20. begetteth an equall number to 8, and 14. added together. So is it in all other numbers, that haue the same equalitie of excesse one aboue an other. Out of this rule of proportion, *Ælian* deriueth the giuing equalitie of strength in the Leaders to euery body in the *Phalange*. For Leaders and Commanders are (or ought at least to bee) chosen by worth, and valour: and the preferments of the feild haue bene held the due reward of vertue. Say then the *Phalangarchs* are preferred to their places according to their worth, and that the first *Phalangarch* is most worthy, the second next him, the third next, the fourth least deserving of the foure. If you should place them, as their worth is in a rancke successiuelly one after an other, the best before the first *Phalangarchie* in the right wing, the second before the next *Phalangarchie* in the same wing, and leaue the other two *Phalangarchs* to command the left wing, the disproportion would be great; the third and fourth not being able to match the worth of the first, and second.

G 3

But

The Tactics

But if you place the best Phalangarch before the first Phalangarchie on the right wing, the second before the second Phalangarchie of the left wing, the third Phalangarch next him before the third Phalangarchie on the left wing, toward the middle Section; the fourth before the fourth Phalangarchie of the right wing toward the same Section, the valours of the Commanders, will be equal in both wings. For as in the number 1. 2. 3. 4. one and 4. make 5, as many, as is made by ioyning 2 and 3 together; so the worth of the fourth Phalangarch ioyned to the worth of the first will arise as high in true valuation, as the worths of the second and third ioyned together. And where the Phalangarchie on the left corner of the left wing is called the second, and the next Phalangarchie standing in the same wing the third; it is to be understood that it is second in dignitie, not in succession of number; for the fourth Phalangarchie in dignitie standeth in place and number next the first; and the second Phalangarchie hath the last place of the whole Phalange. Their places then are after this manner according to Ælian.

$$\begin{array}{ccccccc} & 2 & & f & & 3 & g & & 4 & & d & & e & & 1 \\ & b & & & & c & & & & & & & & & a \end{array}$$

For the understanding whereof, you are to note, that

- a signifieth the first Phalangarchie.
- b the second Phalangarchie.
- c the third Phalangarchie.
- d the fourth Phalangarchie.
- e the Section of the right winge.
- f the Section of the left winge.
- g the middle Section.
- 1 the place of the first Phalangarch.
- 2 the place of the second Phalangarch.
- 3 the place of the third Phalangarch.
- 4 the place of the fourth Phalangarch.

2 The Leaders of the Merarchies] As the Phalangarchs so are all the other Commanders of the severall bodies placed by foure, and the same obseruation to be had, of the dignities of the place, that was in the Phalangarchs: and these 4 Merarchies (for Ælian speaketh of no more than 4) must stand thus.

$$\begin{array}{ccccccc} P & M & M & P & P & M & M & P \\ 2 & 2 & 3 & 3 & 4 & 4 & 1 & 1 \end{array}$$

P, standeth for Phalangarchs.

M, for Merarchs.

Robertellus confesseth he findeth these Merarchs so placed in a written booke, and it is the true placing. The figures, he setteth downe out of his owne wit (as he termeth it) carry with them no fauour of Ælians proportion. Patricius likewise seemeth to have mistaken this proportion in the figures he hath set downe, of which not one is right. I will referre the Reader to their bookes, admonishing him onely of the mistaking. But Ælian placeth here but 4 Merarchs; what order shall be for the other foure? I have alwaies thought Ælian defectiue in this place, neither could I hitherto finde any man, that hath brought light to cleare the doubts. Patricius that purposely discourseth of this place of Ælian

of Ælian.

Ælian, speaketh of bestowing 4 Merarchs onely, as though the rest were to be throwne away from the Phalange. Robertellus seeking to bestow all 8, bestoweth them indeed, but not according to Ælians proportion, which notwithstanding he would seeme to follow. His figure is this.

$$\begin{array}{ccccccc} P. M. M. & M. M. P. & P. M. M. & M. M. P. \\ 1. 8. 4 & 3. 6. 3 & 4. 5. 2 & 1. 7. 2. \\ \text{The right wing} & & \text{The Middle.} & & \text{The left wing.} \end{array}$$

The proportion is his, as I said, and not Ælians. For Ælian placed the first Merarch in the right wing; he placeth him in the left; Ælian the second in the second Phalangarchie, he in the fourth; Ælian the third in the left wing, he in the right; Ælian, the fourth in the fourth Phalangarchie, he in the first. The rest are so jumbled together, as though any thing else had bene sought for, rather than proportion. I take not upon mee to over-rule any doubt; but if among it the rest I enterpose mine opinion, I hope, I shall not incurre iust blame. Thus then: seeing Ælians meaning is by evenesse and worth of number of both wings to finde out the worth of the Commanders of both, if I so distribute them, that the number of the one side shall counterballance the number of the other, I cannot much stray from Ælians meaning. The figure following will doe it.

$$\begin{array}{ccccccc} P. M. M. & M. M. P. & P. M. M. & M. M. P. \\ 1. 5. 1 & 4. 8. 4 & 3. 7. 3 & 2. 6. 2. \\ \text{The right wing} & & \text{The Middle.} & & \text{The left wing.} \end{array}$$

In this figure I have obserued precisely the place, that Ælian gave to the 4 Merarchs. The first standeth on the left hand of the first Phalangarch; the second on the right hand of the second Phalangarch; the third on the left hand of the third Phalangarch; the 4th on the right hand of the 4th Phalangarch. The rest I have added, and divided according to the placing of the first: So that the number that ariseth of the addition of both wings, is alike, and the proportion held. In all the rest of the bodies, where there is a Command over 4, the keeping of the proportion hath no difficulty. So every Phalangarch commandeth over 4 Chiliarchs; every Merarch over 4 Pentecosiarchs; every Chiliarch over 4 Syntagmatarchs; every Pentecosiarch over 4 Taxiarchs; every Syntagmatarch over 4 Tetrarchs; every Taxiarch over 4 Dilochites; every Tetrarch over 4 files; In all which the Commander, which hath the right, hath the first place, he that hath the point of the left hand, the second place; he that standeth on the right hand next to him, the third place; the last place is his, who standeth next to the Commander of the right point on the left hand. And for the place of the Phalangarchs, and of 4 of the Merarchs, and the file-leaders, and of the Tetrarchs, they are laid out by Ælian. The rest appeare by these, and are to be squared by the same rule of proportion, as Ælian admonished.

The

The distances to be obserued betweene Souldior and Souldior in opening and shutting the Phalange.

CHAP. XI.

WE are now to speake of *distances* both in length, and depth betwixt Souldier, and Souldier, as they stand ordered in Battaile. The *distances* vary in three sorts. For first they are placed in thinner distance for some speciall causes. And a Souldier so placed taketh vp ¹ 4 cubits. But in ² *Densation* or *closing* he taketh vp 2 cubits. ³ In *Constipation* or *shutting*, one cubit.

Densation then, or *closing* is, when we draw wide distances close together, and by *side-men*, and *followers* (that is both in length and depth) gather vp the bodie of the *Phalange*: so notwithstanding that the souldier yet hath libertie to moue, and turne about.

Constipation, or *shutting* is when the *Phalange* by *side-men* gathereth it selfe yet closer together, then in *Densation*; so that by reason of the nearnesse there is left no *Declination*, or turning of faces either to the right, or left hand.

The use of *Closing* is, when the *Generall* leadeth the *Phalange* against the enemy. Of *Shutting* when he would haue it stand fast (and as it were *locked vp*, and *serred*) to receiue the charge of the enemy.

Seeing then there are 1024 *File-leaders* in the front of the *Phalange*, it is plaine that ⁴ in their ordinary array they take vp in length 4096 *Cubits* ⁵ (that is ten furlongs, and ninetie six cubits) In *Closing* fūe furlongs, and forty eight cubits. In *Shutting* two furlongs, a halfe, and tōwer and twenty cubits.

Notes.

AFTER Souldiers are armed, and distributed into bodies military, the next care is to be had of their Mouing. For as a man, let him be neuer so well proportioned, and strong, if he pace disorderly, and either set too great strides, or reele here, and there, or so mince, and tread out his steps, as if his legs were bound together, groweth hereby deformed, and not onely loseth his comeliness, but his actiuitie withall, and possibility to performe any thing by strength: So is it of an Armie, that hath either too great distances, or is thronged vp, or pestred too close together. ^a Too much thronging bindeth, as it were, the souldiers hands, and taketh away the use of his weapons, as on the other side ^b falling one loose from another, and standing or mouing too farre asunder, maketh the Battaile weak, and disioynted, and subiect to the enemies entry, and easie to be broken. The meane betwixt both was brought in by King Philip, King of Macedonia, who first constituted, and raised the Macedonian Phalange, and invented the distances of opening and closing the same; imitating the ^c *ferring of Targets* (called *Synaspismos*) practised by the old Heroes at Troy. Out of his discipline sprang the distances mentioned here by *Eliau*: which are of three sorts; The first are large distances of

¹ Four Cubits: Which amount to six foote. For a Cubit conteineth a foote and a halfe. This ^d distance was used in marching, or else in solemne pompes and shewes. And the souldier hauing a pike of ^e 14 Cubits or 21 long, whereof one halfe lay forward on his soulder, and the other halfe backward, it was requisite he should haue a reasonable large distance, both in file and ranke, ^f to the end, that in turning this way, or that way,

The distances to be observed betwene Souldier and Souldier in opening and shutting the Phalange.

CHAP. XI.

WE are now to speake of *distances* both in length, and depth betwixt Souldier, and Souldier, as they stand ordered in Battaille. The *distances* vary in three sorts. For first they are placed in thinner distance for some speciall causes. And a Souldier so placed taketh vp ¹ 4 cubits. But in ² *Densation* or *closing* he taketh vp 2 cubits. ³ In *Constipation* or *shutting*, one cubit.

Densation then, or *closing* is, when we draw wide distances close together, and by *side-men*, and *followers* (that is both in *length* and *depth*) gather vp the bodie of the *Phalange*: so notwithstanding that the souldier yet hath libertie to moue, and turne about.

Constipation, or *shutting* is when the *Phalange* by *side-men* gathereth it selfe yet closer together, then in *Densation*; so that by reason of the nearnesse there is left no *Declination*, or turning of faces either to the right, or left hand.

The use of *Closing* is, when the General leadeth the *Phalange* against the enemy. Of *shutting* when he would haue it stand fast (and as it were *locked up*, and *ferr'd*) to receive the charge of the enemy.

Seeing then there are 1024 *File-leaders* in the front of the *Phalange*, it is plaine that in their ordinary array they take vp in length 4096 *Cubits* (that is ten furlongs, and ninetie six cubits) In *Closing* five furlongs, and forty eight cubits. In *shutting* two furlongs, a halfe, and twenty cubits.

Notes.

AFTER Souldiers are armed, and distributed into bodies military, the next care is to be had of their Mouing. For as a man, let him be neuer so well proportioned, and strong, if he pace disorderly, and either set too great strides, or reele here, and there, or so much, and tread out his steps, as if his legs were bound together, groweth hereby deformed, and not onely loseth his comelinesse, but his actiuitie withall, and possibility to performe anything by strength: So is it of an Armie, that hath either too great distances, or too narrow a vp, or pressed too close together. Too much thronging bindeth, as it were, the Souldiers hands, and taketh away the use of his weapons, as on the other side falling too loose from another, and standing or mouing too farre asunder, maketh the Battaille loose, and disoriented, and subiect to the enemies entry, and easie to be broken. The meane mixt both was brought in by King Philip, King of Macedonia, who first constituted, and raised the Macedonian Phalange, and invented the distances of opening and closing: imitating the setting of Targets (called *Synaspismos*) practised by the old Greeks at Troy. Out of his discipline sprang the distances mentioned here by Elian: which are of three sorts; The first are large distances of

Four Cubits } Which amount to six fote. For a Cubit containeth a fote and a halfe. This distance was used in marching, or else in solemne pompes and shewes. The souldier hauing a pike of 14 Cubits or 21 long, whereof one halfe lay forward on his shoulder, and the other halfe backward, it was requisite he should haue a reasonable large distance, both in file and ranke, to the end, that in turning this way, or that way,

The third distance called *shutting* or *ferring* of fote in file *shoulder to shoulder* in ranke

The distances to be observed betwene Souldier and Souldier in opening and shutting the Phalange.

CHAP. XI.

WE are now to speake of *distances* both in length, and depth betwixt Souldier, and Souldier, as they stand ordered in Battaile. The *distances* vary in three sorts. For first they are placed in thinner distance for some speciall causes. And a Souldier so placed taketh vp ¹ 4 cubits. But in ² *Densation* or *closing* he taketh vp 2 cubits. ³ In *Constipation* or *shutting*, one cubit.

Densation then, or *closing* is, when we draw wide distances close together, and by *side-men*, and *followers* (that is both in length and depth) gather vp the bodie of the Phalange: so notwithstanding that the souldier yet hath libertie to moue, and turne about.

Constipation, or *shutting* is when the Phalange by *side-men* gathereth it selfe yet closer together, then in *Densation*; so that by reason of the nearnesse there is left no *Declination*, or turning of faces either to the right, or left hand.

The use of *Closing* is, when the Generall leadeth the Phalange against the enemy. Of *Shutting* when he would haue it stand fast (and as it were *locked up*, and *ferr'd*) to receiue the charge of the enemy.

Seeing then there are 1024 *File-leaders* in the front of the Phalange, it is plaine that ⁴ in their ordinary array they take vp in length 4096 *Cubits* (that is ten furlongs, and ninetie six cubits) In *Closing* fivie furlongs, and forty eight cubits. In *Shutting* two furlongs, a halfe, and fower and twenty cubits.

Notes.

AFTER Souldiers are armed, and distributed into bodies military, the next care is to be had of their Mouing. For as a man, let him be neuer so well proportioned, and strong, if he pace disorderly, and either set too great strides, or reele here, and there, or so mince, and tread out his steps, as if his legs were bound together, groweth hereby deformed, and not onely loseth his comelinesse, but his actiuitie withall, and possibility to performe anything by strength: So is it of an Armie, that hath either too great distances, or is thronged up, or pestered too close together. ^a Too much thronging bindeth, as it were, the souldiers hands, and taketh away the use of his weapons, as on the other side ^b falling one loose from another, and standing or mouing too farre asunder, maketh the Battaile weakke, and disoriented, and subiect to the enemies entry, and easie to be broken. The meane betwixt both was brought in by King Philip, King of Macedonia, who first constituted, and raised the Macedonian Phalange, and invented the distances of opening and closing the same; imitating the ^c setting of Targets (called Synaspismos) practised by the old Heroes at Troy. One of his discipline sprang the distances mentioned here by Elian: which are of three sorts; The first are large distances of

1 Fourie Cubits] Which amount to six foote. For a Cubit containeth a foote and a halfe. This ^d distance was used in marching, or else in solemn pompes and shewes. And the souldier hauing a pike of ^e 14 Cubits or 21 long, whereof one halfe lay forward on his souldier, and the other halfe backward, it was requisite he should haue a reasonable large distance, both in file and ranke, ^f to the end, that in turning this way, or that

and raised the Macedonian Phalange, and invented the distances of opening and closing the same; imitating the setting of Targets (called Synaspismos) practised by the old Heroes at Troy. Out of his discipline sprung the distances mentioned here by Ælian: which are of three sorts; The first are large distances of

Four Cubits] Which amount to six foote. For a Cubit containeth a foote and a halfe. This distance was used in marching, or else in solemne pompes and shewes. And the souldier having a pike of 14 Cubits or 21 long, whereof one halfe lay forward on his shoulder, and the other halfe backward, it was requisite he should have a reasonable large distance, both in file and ranke, to the end, that in turning this way or that way,

way, or that way, or moving out of his place (for no man in his marche, can alwaies hold his ranke) be offended nor his next neighbours therewith. This distance our exercise at this day calleth open order. The next distance is of

Two Cubits] Or three foote. The name of it in Greeke is Pycnosis, that is thickning. In Leo it is called Sphinxis, (knitting together) in our moderne exercise Order. And it is, when from the distance of 6 foote, we draw our Phalange both by file, and ranke, so close, that the souldiers stand but 3 foote one from another every way. This distance is used, when the Army approacheth neare to the enemy (and onely commeth not to charge) that it may be ready to shut, and locke it selfe for the charge, which is performed in the last distance of

One Cubit] A foote and a halfe. This is called Synaspismos, ioyning Target to Target. For, as I before shewed, the pikemen of the Macedonians used also Targets with their pikes, and in charging the enemy closed so neare in front, that their owne Targets touched one another. This kind of fight the Egyptians used in Xenophon (which he calleth locking together of Targets) and by means thereof had the advantage against the Persians. The Parthian horse likewise comming to charge Crassus with their staves; After they perceived the depth of the locking of Targets, and the settlednesse, and stedfastnes of the Roman Phalange, they retired, and durst not come to hands with them. And Diodorus Siculus writes that Alexander besieging the City of

Halicarnassus, there was in the City, and in service of Darius one Ephialtes an Athenian, a man of great valour, and strength of body; He by the permission of Memnon Generall of Darius Armie, determined to make a sally. And taking to him 2000 mercenarie souldiers, all chosen men, and giuing brands flaming with fire to one halfe, and reseruing the rest for fight, he opened the gates, and fell out, throwing fire upon the engines of battery, which soone caught a mighty flame; And marshalling the rest into a thicke and deepe Phalange, himselfe led on, and was the first that fell on the Macedonians coming to aide, and to quench the fire. Alexander advertised hereof speeded to the medley; & ordered first the Macedonians in front, after them other choice men, for seconds; and in the third place men of extraordinary account for their prowesse, himselfe leading them on sustained the enemy, which seemed vnresistible, and sent others to flake, and put out the fire, and to preferue the Engines. The fight was hot, and albeit the Macedonians found meanes to quench the fire, yet had Ephialtes the better in the fight; who both himselfe killed many with his owne hands, and the towers from the walls furnished with many Catapults annoyed greuously the Macedonians. In so much that some falling in the place, other some forsaking their ground by reason of the number of Engine Darts that fell thicke amongst them, Alexander himselfe was reduced to extremitie. Here the old souldiers of the Macedonians; although otherwise freed from such seruice in regard of their age, hauing of a long time followed the warres with King Philip, and gained many a battaile, were by this occasion tolled out to succour; and as they excelled the yonger sort in greatnes of spirit, and military experience, so meeting with the run-a-waies, they bitterly reuiled, and taunted them for their cowardice; Then *ferring themselves close, and ioyning their Targets together, they repressed, and held the enemy short, who now seemed to haue the victory in his hands. Finally killing Ephialtes, and many other, they droue the rest into the City. A memorable seruice of the use of Targets, and of the Synaspisme of the Macedonians, which was not used, but when they either gave upon, or received the charge of the enemy. And the Targets so knit together serued for a wall (as it were) to the whole Phalange, and by them the souldier

* Synaspisantes

was

was defended from the misſiue weapons of the enemie, and his body couered euen from the piercing of the sword. Synaspismos then, or ſmitting, is that diſtance in the Phalange, which bringeth the ſouldiers Target to touch one another and is limited by Ælian to a cubite (that is a foote and a halfe) betwixt ſide-men and ſide-men in the front. What diſtance the followers ſhould haue, Ælian ſetteth not here done in plaine words; but implies, that they ſhould hold their 3 foote ſtill, in that he ſaith the Phalange in conſtitution gathereth the ſide-men cloſer, then in denſation, but ſpeaketh nothing of ſollowers. ^a Polybius teacheth it more plainly; who giues them three foote diſtance from the Leader, both according to the Macedonian and Roman diſcipline, and that for the uſe of their armes: with whom Ælian alſo agreeeth ^b afterward. In what manner the Targetiers made their cloſings, and how their Targets were caſt from the backe, where they hung, to the left ſhoulder, I haue before noted in the ſecond Chapter, and therefore thinke it needleſſe here to repeat. Now for the ground, that a Phalange taketh up in each of theſe orders, Ælian ſheweth it in the words following, allowing the Phalange.

4 In ordinary aray foure thouſand cubits } The Phalange in open order, ſaith Ælian, takes up 4096 cubits of ground. This is to be vnderſtood in front, or length; for in depth it hath no more, then 64 cubits; euer ſouldier (which are in number, 16 in file) poſſeſſing 4 cubits of ground in his open order; A cubit is the part of the arme, which reacheth from the elbow to the middle fingers end, and is as much, as a foote and a halfe. In front then, there being 1024 File-leaders, we muſt allot to each of them foure cubits, of ground; to the thouſand 4000 cubits, and to the odde twentie foure 96 cubits. For foure times twentie foure makes 96, which together comes to 4096 cubits, and to fix thouſand one hundred fortie foure foote.

5 Ten furlongs and ninety ſix cubits } Where this ſpace is ſquared out by tenne furlongs, we muſt vnderſtand, that a furlong containes ^a foure hundred cubits, and 4096 being diuided by 400 the quotient is 10: — that is ten furlongs and 96 cubits, as Ælian ſaith. Which meaſure of ground the Phalange of Armed taketh in open Order. Of theſe furlongs ^c ſeuene and a halfe go to a mile, by which account the front of the Phalange of armed in open order taketh up one mile, a quarter, and 346 cubits, meaſuring it by ſeete it amounts to 6130. In cloſing (which is named Order, and is the next diſtance) becauſe the ſouldier is allowed but 2 cubits, that is halfe ſo much, as in open Order, the diſpenſion will not exceede ſixe furlongs, 48 cubits; that is 2048 cubits in all, which amounts to halfe a mile, halfe a quarter, and 173 cubits, in ſeete, 3072. In ſmitting 2 furlongs and a halfe, and 24 cubits; that is a quarter of a mile and 274 cubits.

The arming of the Phalange.

CHAP. XII.

The Phalange is to be armed with Target and Pyke. The beſt Target is the Macedonian target made ^a of braſſe, and ^b ſomewhat hollow, and hauing ^c eight handfulls in Diameter. The Pyke ought to be ^d no ſhorter then 8 cubits; and the longeſt no longer, then a man may well uſe and wield in handling.

Notes.

In the ſecond Chapter of this booke was handled the diuerſitie of armes, uſed in the Phalange. This ſetteth forth the choice, that is to be made for matter and faſhion, and what

what ſiſe is beſt of pike and target. For the other armor of the armed (whereof I ſpake, in my notes to the ſecond Chapter) is (no queſtion) to be fiſſed to the body of him, that ſhall beare them. He giueth them to the armed a target, and a pike, the target the Macedonian target, the matter whereof was firſt of braſſe. I haue ſhewed, that the Macedonian target was of braſſe, and that they were called by reaſon of the bearing ſuch targets Chalcipides Brazen-targets. I am induc'd to thinke, that, as Philip borrow'd many other things in warre from the Lacedemonians, ſo he borrow'd this kinde of target from them. For they by the ordinance of Lycurgus, were intoynd to haue no other matter in their target, then braſſe. ^a Xenophon giues a reaſon why they were made of braſſe. For Lycurgus was of opinion, ſaith he, that ſuch a Target was moſt fit for warre, becauſe it is ſoone brought to ſhine, and it gathereth not ruſt eaſily, two great commodities in armes. For albeit the chiefeſt conſiderations be ſureneſſe, and ſtrength, yet is not the beauty to be neglected, which ſhining doth principally ſet out. ^b Beſides that it dazzleth the eye of the enemie, and ſtrikes an amazement into his minde. ^c Xenophon much admireth Ageſilaus, that he ſo armed, and clothed his armie, that they ſeemed to be nothing, but braſſe, and nothing, but ſcarlet. The braſſe he ſpeaketh of, were the brazen targets of his ſouldiers, which couered the moſt part of the body, and were chiefeſt the object of the eye, without that, that any other weapon was at that time of Braſſe. Therefore, as I ſaid, I am of opinion that the brazen Target came from the Spartans to the Macedonians. The Brazen-targets Ælian would haue

² Somewhat hollow] If they ſhould beare ſtreight out without any bowing, beſides that they were vneafe, they would lie kicking out from the body, and not cower it much. The arme, or ſhoulder, that is inſerted into the Target, is bowing. And the target ſomewhat bowing ſits it for eaſe, and ſlopes more toward the body to cower it, and is more pliable to be carried. But the hollowneſſe ought not to be much. He would haue it alſo

³ Eight handfulls in Diameter] The Diameter in a circle is a right line, which is drawne from one ſide of the circumference to the other paſſing thorough the Center, or middle point of the circle, diuiding the circle in two equal parts. Here the Diameter of the target is taken for the exact breadth of the target, which ought to be, according to the Macedonian manner, eight handfulls, or two foote, that is 32 fingers. For foure handfulls go to a foote, and foure fingers to a handfull. ^d Leo giues it three Spithams, that is 36 fingers, if he meane the great ^e Spithame, which is of twelue fingers. And the leſſe comprehending a handfull he cannot meane. For ſo ſhould the breadth of the target be no more, but three handfulls, a breadth inſufficient to cower any mans body. Whether of them is the better will appeare in triall. The Diameter that ſerues to cower the bodie from the upper part of the necke to the middle part of the thigh, is enough in theſe round targets. That, which is more, is rather troubleſome, then fit for uſe. And I am of Iphicrates indgement in targets, that performing the cowering of the bodie, they ſhould be as light, as may bee, leaſt the ſhoulder be over-laden with vneceſſarie weight. In which regard I preſerre the Target of Ælian, before that of Leo; Ælians reaching up to the height of the necke from the middle of the thigh; Leos carrying a handfull more in breadth, which in the circumference groweth to a good proportion of weight and greatneſſe.

4 No ſhorter than 8 Cubits] That is 12 foote. Short pikes againſt long haue a great diſadvantage. With the long pike a man is able to ſtrike, and kill his enemy, before himſelfe can be touched, or come in danger of a ſhorter, the pike keeping the enemy out ſo farre, as the length is. The experience of the battaile of ^f Sorano, ſheweth it; where Vitellozzo Vitelli diſcomfited the Almaines onely with the advantage of pikes an arme longer than theirs. Againſt long pikes, this policie was uſed by Cleonymus the Lacedemonian King, as ^g Polienus tells. Cleonymus beſieging Aedeſſa, and hauing over-throwne

throwne the wall of the City, the pikemen of the City sallied out, whose pikes were each 16 cubits in length. Cleonymus closed his Phalange in depth, and commanded the file-leaders to lay away their pikes; and when the pikemen of the enemy came to charge, to seaze vpon their pikes with both hands, and hold them fast, and the followers to passe thorough by the file-leaders sides, and maintaine the fight. The file-leaders laid hold on the pikes, and the enemy stroue to recover them out of their hands. In the meane time, the followers passing thorough the ranke of file leaders to the front, slew the enemies pikemen, and got the victorie. This was Cleonymus deuise against long pikes, which notwithstanding derogates nothing from the length of pikes more, than from shortnes. For the same policie might haue preuailed as well against short pikes, as long, each, as soone as the enemies haue seized vpon them, growing to be of no vse. But that the longer pike is to be preferred before the shorter, I haue shewed before by reason: and the reformation of armes made by Iphicrates amongst the Athenians, and by Philopomen amongst the Achaians, will be warrant enough so to hold. In the length notwithstanding ought to be a reasonable consideration, that it exceede not the measure of his strength, that shall beare the pike.

The worth that the File-leaders, and next followers
should be of

CHAP. XIII.

THE File-leaders (as the Commanders of files of the Phalange) are to be the choice and flower of the Army, and to excell the rest as well in stature, as in experience and martiall skill. For this Ranke knitteth and bindeth in the Phalange, and of all other yeeldeth greatest vse. For, as a sword taking to the edge as a weight, and sway, the swelling yron towards the backe exhibiteth thereby more violence in piercing, so in a Phalange the Ranke of File-leaders is the edge it selfe, and the multitude of after-commers is the swelling, and sway, and increase of weight.

Consideration must be had likewise of those that follow in the second Ranke. For their Pikes reach ioyntly ouer the front, and being next in place they are alwaies ready for vse. And the File-leader falling, or being wounded, the next follower stepping to the front in his place, holdeth together, and preferueth the tenor of that Ranke vnbroken.

Furthermore, we are to order the third and the rest of the Ranks according to reason, and as the valour of our souldiers shall require.

This Chapter sheweth how the Souldiers are to be ordered in every File: whereof, because I haue before spoken sufficiently in my Notes to the fifth Chapter; and the words of this Chapter carry no difficultie, or obscuritie with them, I will forbear to treat any further.

CHAP. XIII.

Of the strength of the Macedonian Phalange, and length
of the Souldiers Pikes.

CHAP. XIII.

THE Macedonian Phalange hath of enemies beene thought vnresistible, by reason of the manner of embattailing. For the Souldier with his Armes standeth in close order, or shutting, when he is ready for fight, occupying two Cubits of ground. And the length of his Pike is sixteene Cubits; according to the first institution, but in truth it ought to be foureteene Cubits; whereof the space betwixt the hands in charging taketh vp two Cubits, the other twelue lye out from the front of the Battaille. Those in the second Ranke, that stand next to the Leaders (loosing foure Cubits in the Phalange) haue their Pikes reaching ouer the first Ranke ten Cubits. Those of the third Ranke eight Cubits, of the fourth Ranke six cubits, of the fifth 4 cubits, of the sixth 2 Cubits. The Pikes of the other behind cannot attaine to the first Ranke. And seeing five or six pikes are charged ouer the first Ranke, they present a fearefull sight to the enemy, and double the

Cap. 14.

Pikes reaching
ouer the Front

Phalange, to make some principall Commanders not onely in front; but also in the Reare of the Battaille, for the causes before mentioned.

Notes.

THE strength of the Macedonian Phalange, which consisted principally in the protension, and charging of pikes, and knitting together of Targets, is here set downe. The whole Chapter seemeth to haue beene taken out of Polybius, who handleth the same argument, and almost with the same words, but that Ælian, and he differ about the number of Cubits, which the Pikes take vp reaching ouer the front of the Phalange.

The Macedonian Phalange, hath beene thought to be vnresistible. The strength of the Macedonian Phalange appeareth no way better, than by the conquests it hath made. King Philip was the inventor of it; and by that invention raised the kingdom of Macedonia from the poorest, to the powerfulest, and greatest kingdom of Europe; and (that I may use the words of Diodorus Siculus,) finding the Crowne at his comming to it, in bondage to the Illyrians made it afterward Lady of many great Nations, and Cities; and purchased to himselfe, to be declared Generall of

throwne the wall of the City, the pikemen of the City sallied out, whose pikes were each 16 cubits in length. Cleonymus closed his Phalange in depth, and commanded the file-leaders to lay away their pikes; and when the pikemen of the enemy came to charge, to seaze vpon their pikes with both hands, and hold them fast, and the followers to passe thorough by the file-leaders sides, and maintaine the fight. The file-leaders laid hold on the pikes, and the enemy stroue to reconner them out of their hands. In the meane time, the followers passing thorough the ranke of file leaders to the front, slew the enemies pikemen, and got the victorie. This was Cleonymus deuice against long pikes, which notwithstanding derogates nothing from the length of pikes more, than from shortnes. For the same policie might haue preuailed as well against short pikes, as long, each, as soone as the enemies haue seized vpon them, growing to be of no vse. But that the longer pike is to be preferred before the shorter, I haue shewed before by reason: and the reformation of armes made by Iphicrates amongst the Athenians, and by Philopomen amongst the Achaians, will be warrant enough so to hold. In the length notwithstanding ought to be a reasonable consideration, that it exceede not the measure of his strength, that shall beare the pike.

weight.

Consideration must be had likewise of those that follow in the second Ranke. For their Pikes reach ioyntly ouer the front, and being next in place they are alwaies ready for vse. And the File-leader falling, or being wounded, the next follower stepping to the front in his place, holdeth together, and preferueth the tenor of that Ranke vnbroken.

Furthermore, we are to order the third and the rest of the Ranks according to reason, and as the valour of our souldiers shall require.

This Chapter sheweth how the Souldiers are to be ordered in euery File: whereof, because I haue before spoken sufficiently in my Notes to the fifth Chapter; and the words of this Chapter carry no difficultie, or obscuritie with them, I will forbear to treat any further.

Of the strength of the Macedonian Phalange, and length of the Souldiers Pikes.

CHAP. XIII.

THE ¹ Macedonian Phalange hath of enemies beene thought vnresistible, by reason of ² the manner of embattailing. For the Souldier with his Armes standeth in close order, or shutting, when he is ready for fight, ³ occupying two Cubits of ground. And the length of his Pike is sixteene Cubits, according to the first institution, but in truth it ought to be foureteene Cubits; whereof the ⁴ space betwixt the hands in charging taketh vp two Cubits, the other twelue lye out from the front of the Battaille. Those in the second Ranke, that stand next to the Leaders (loosing foure Cubits in the Phalange) haue their Pikes reaching ouer the first Ranke ten Cubits. Those of the third Ranke eight Cubits, of the fourth Ranke six cubits, of the fift 4 cubits, of the sixt 2 Cubits. ⁵ The Pikes of the other behind cannot attaine to the first Ranke. And seeing fise or six pikes are charged ouer the first Ranke, they present a fearefull sight to the enemy, and double the strength of the souldier standing fortified, as it were, with fise, or six Pikes, and seconded with a maine force at his backe, as the figure sheweth. Moreover they that are placed after the sixt Ranke, albeit they push not with their pikes, yet thrusting on with the weight of their bodies, re'nforce the strength, and power of the Phalange, and leaue no hope for the File-leaders to flie, or shift away. Some would haue the hinder pikes longer, then the formost, that they of the third, and fourth Ranks might beare out the heads of their pikes equally with the first.

⁶ The Superordinary Lieutenant of euery Syntagma must be a man of vnderstanding, ouerseeing the souldiers of his command, that they file, and ranke; and if for feare, or other occasion, any forsake their ground, he is to compell them againe to their places; and in Closing to put them (when neede requireth) as neare vp together, as they should stand. For it is a great strength, and assurance to the Phalange, to haue some principall Commander not onely in front, but also in the Reare of the Battaille, for the causes before mentioned.

Notes.

THE strength of the Macedonian Phalange, which consisted principally in the ¹ protection, and charging of pikes, and knisting together of Targets, is here set downe. The whole Chapter seemeth to haue beene taken out of ^a Polybius, who handleth the same argument, and almost with the same words, but that Ælian, and he differ about the number of Cubits, which the Pikes take vp reaching ouer the front of the Phalange.

¹ The Macedonian Phalange, hath beene thought to be vnresistible] The strength of the Macedonian Phalange appeareth noway better, than by the conquests it hath made. King Philip was the inuenter of it; and by that inuention raised the kingdom of Macedonia from the poorest, to the powerfulest, and greatest kingdom of Europe; and (that I may use the words of ^c Diodorus Siculus,) finding the Crowne, at his comming to it, in bondage to the Illyrians made it afterward Lady of many great Nations, and Cities; and purchased to himselfe, to be declared Generall of Greece.

Greece. And first overthrowing the Illyrians, Paonians, Thracians, and Scythians, after ward set vpon the kingdome of Persia to breake it, after he had enfranchised the Graecian Cities of Asia. And albeit death intercepted him, yet he left sufficient forces to his sonne Alexander, that he needed no other allies to overthrow the Souerainnery of Persia. After his death Alexander took his kingdome, and Armes, and in short encountering, and vniuersally Darius in two great Battails, runne thorough Asia like a flish of lightning, rearing a pieces all, that resisted, or stood in his way, and laid the foundation of that kingdome, which (albeit afterward diuided) continued long in his Successors. Neither was the experience of their invincibleness against the barbarous people onely, but as much against the Graecians, who till Philips time were esteemed the chiefe masters of Armes in Europe. This is cleare by the victories, the Macedonians obtained against the renowned Cities of Greece both jointly and severally. Philip overthrow the Phocians, albeit the Lacedemonians, and Athenians toynd with them. The same Philip at Cheronæa defeated the power of the Thebans, and Athenians toynd together. Alexander took and sacked the Citie of Thebes, that about that time was accounted the mightiest Citie of Greece. His Lieutenant Antipater toyled the Lacedemonians in a yet battile, and then their King Agis. Antigonus Tutor of King Philip the sonne of Demetrius, broke an Arme of the Lacedemonians and Peloponnesians at Sclania, and chased out of Greece Cleomenes the last brave King of Sparta. Surely they were not beaten in the field by any Nation, but onely by the Romans. And yet the iudgement of Polybius, doth in this also proue it selfe good. For where the Romans had these victories against the Macedonians, he assigneth this to be the cause, that the Phalange at the time of the fight had not the proper place, nor meanes to vse it owne power in the encounter; so long as the Phalange hath ground enough, and can meete the enemy with a right front, he holdeth it not possible to be toyled, being diuided, and in places vneuen, he is of opinion, and experience hath taught, it may easily be put in a route. Plutarch compareth it for strength (so long as it is one bodie, and maintaineth the Synaspisme jointly) to an invincible beault; being dispoised, he saith, it looeth the force in the whole, and in every man particular, both in regard of the manner of arming, and also because the violence of it consisteth rather in knitting of all parts together, than in particular of any mans valour. Three battails (to praetermit diuers skirmishes,) I finde the Romans haue wonne, and therein toyled the Macedonians; One against King Philip, the sonne of Demetrius; an other against Antiochus; the third against Perseus the sonne of King Philip. For I passe over those, wherein they were beaten by Pyrrhus, in that the morse. Philip breaking out Phalange, and not using the whole together, but fighting against the Romans with the right winge onely, yet had the better, and was too hard for that part of the Roman Army, that toynd with him; but the other winge coming into the field, fit rather for a march, than a fight, and not being able to order themselves Phalange-wise, were soon defeated, and the Roman victorious, fell vpon the reare of the right winge (where Philip was, and had now gotten the victory) and forwarde the field. Antiochus unskillfull in true ordering of a Phalange, trusted rather to his horse, than his Phalange, and being to fight with L. Scipio, where hee had full scope, he contrary-wise narrowed it, drawn out the depth into 32: whereby he lost the advantage of marching the front of the Romans, and after his horse were beaten, gaue facilitie to the enemy of coming on on all sides. Perseus toyning battails with Paulus Emilius, as long as the Phalange continued in the right figure, few many of the Romans, and forced them to retire, but following on too eagerly, he came to an

even

even, and rough ground, wherein the Phalange being dispoised, left spaces, and branches for the Romans to enter and defeat it. So long then, as the Macedonian Phalange had fit ground, and the right property of embattailing, it stood fast against the Romans the greatest souldiers that euer were, being in their hands, that knew not how to vse it (as a sword in the hands of a childe) it yielded to time and fortune. The cause of the strength of the Phalange is assigned to be

2 The manner of embattailing. Which consists principally in ordering of Targets, and pike; in closing of the Targets by Synaspisme, and in ioint charging of the pikes; which lying out thicke from the front, besides the horror of the sight, giue almost an impossibilitie to enter the Phalange. I haue alledged the iudgement of Emilius concerning the fight presented by a Pnaiauge, when the Pikes lie so charged out of the front. Polybius thinketh nothing can resist the force thereof. Livy, albeit many times more than partiall to the Romans, yet in the selfe same fight betwene Perseus and Emilius giueth his iudgement thus of the Phalange: The second Legion (saith he) inuaded it selfe into the middle empty place, and so broke asunder the Phalange. Neither was there any more euident cause of victory, then the fights in diuers places at once, which first troubled the Phalange in turning many waies, and afterward plainly disioynted, and scattered it; whose forces being vnited and rough with charged pikes are intollerable. If by giuing on in diuers places you constrain it to bring about the pikes immouable through length and weight, it entangleth it selfe with confused crossings. If at one time you charge it both flanke; and reare, they fall asunder like a ruinous building. As then they were compelled many waies to answer the Romans, and so to breake their battaile into many parcells. And the Romans vpon the first opportunitie of a breach straight waies conueighed in their troupes, who if they had met the enemy in front, had runne vpon the pikes, as in the beginning it hapned to the Pelignans, being too forward to come to hand, and could not haue resisted the Phalange fast shut, and ferred vp for the encounter: thus Livy concerning the Phalange. Who albeit a Roman, holdeth the same opinion that Polybius doth. And in another place telling of Philips encamping, he saith, he was lodged in a wooddy plot, which was vnfit for the Phalange; especially of the Macedons, which vnlesse it cast the pikes, as it were, a muniment before the Targets, (and that cannot be, but in open ground) is of no great vse. So then if Pikes may be charged out before the Targets, the Phalange is of great vse. But, that I may not seeme, to rely vpon bare opinion, let vs heare by an example, or two, the experience of the Pike, and Target of the Macedonian against the Roman armes. When T. Quintus Flaminius the Rom. Consull had driuen King Philip, and his army from the streights neare Antigonis, seeing that the enemy kept himselfe with his strength, and abstained from the field, he determined to try the Cities of Thessaly, and hauing wonne some by force, some by feare, he came before Rhage, and besieged it. He found the siege longer, and more difficult, then any man would haue thought. And the enemy made his resistance, that way, the Consull would hardly haue beleueed, he could. For he imagined that all his labour should be in throwing downe the walls. If once he found passage for the Army to enter, there would after be nothing else, but flight and slaughter, as is wont in wonne Cities. But after that part of the wall was throwne downe with the Ramme, and the Arme entred the Citie by the breach, it was the beginning of a new and fresh labour. For the Macedonians, that were there in Garrison, being many, and chosen, thinking it also a glory to them, if they could defend the Citie, rather with

H 2

armes

armes and valor, than with wailies, *ferring* themselves close together in a deepe *Phalange*, when they perceived, that the Romans began to enter the breach droue them out, the place being cumbersome, and hard to make a retreat. The Consul much offended therewith, and thinking that shame concerned not only the delay of winning one Citie, but also the state of the whole warre, (which for the most part dependeth vpon moments of small matters) purging the place which was heaped vp with the fall of the halfe-ruined wall, aduanced a Tower which in many stories was stuffed with multitudes of armed men, and sent besides *Cohorts* vnder their Ensignes to breake with maine force (if it were possible) the body (they call it the *Phalange*) of the Macedonians. But the kinde of weapons and fight was more aduantageous for the enemy, than for the Romans; especially in that place, which was narrow, and streightned with the small space of the ouerthrowne wall. When the Macedonians, *ferring* themselves close, had charged pikes of a great length before their front, and the Romans, after their darts throwne in vaine against the *testudo* compacted, as it were, of the thicke knitting together of the Targets, had drawne their swords, they could neither come vp close, nor cut a sunder the pikes. And in case they cut the heads of, or broke any, the steale amongst the rest of the whole pikes filled vp the roome with their sharpe fragments. Ioyne that that part of the wall, which was yet whole, secured the enemies flanks on both sides; neither needed they much ground in retiring or advancing to charge, which things are wont to cause the breach of array. There also fell out a chance which increased their hopes, and spirits. For the Tower being driuen on vpon a rampier, that was not well rammed vnderneath, but had loose earth, one of the wheelles sinking deeper into the ground than the rest, made the Turret to nodd, & lie of one side, that both the enemy beleued it would fall, and they within it were put in a pitifull feare. When nothing succeeded well, the Consul was euill appaied, that the Macedonian souldiers, and kinde of Armes, might seeme matcheable to his, and seeing no great hope of speedy winning the Citie, and that the place was vnfit to winter in, raised his siege. So here the Macedonian souldier is not onely equalled, but also preferred before the Roman, and that onely by reason of his armour, the Pike and Target. An other experience fell out in the battaile betwixt Perseus, and Emilius, whereof I speake in this Chapter. The storie is this: The Romans comming to ioyne batteil with the Macedonians, and not able to come vp to them by reason of the length, and ioint ouer-bearing of their pikes. There was one *Salius* a Captaine of *Pelignans*, who tooke the Ensigne of his Company from the Ensigne-bearer, and threw it into the Macedonian *Phalange*. The *Pelignans* ranne in heapes to the place (for it is not lawfull, nor honest, for the *Italians* to forsake their Ensignes) where the medley brought forth wonderfull effects. For the *Pelignans* fought with swords to put by the pikes, and to presse them downe with their Targets. And seazing vpon them to pull them out of the handes of the Macedonians. The Macedonians contrary wise, maintaining their charge with both hands, and striking such, as approached neare, thorough the bodies, armes and all, neither Target nor Carace, being able to sustaine the violence of the blow, turned topsy-turvy the bodies of the *Pelignans*, who not with reason, but with the rage of wilde beasts, threw themselves desperately vpon wounds, and vpon certaine, and fore seene death. So the foremost falling, the followers began to slacke. And yet they fled not, but retired to the mount called *Olacrus*. I will out of Appian wynn: a third experience in the battaile of Antiochus

Antiochus
Emilius.

Appian. in Cy-
12. 13. 109. B.

against L. Scipio, which I likewise touched before in this Chapter. As soone, as the Horse, and Chariots of Antiochus were put to flight by the Roman horsemen, and by Eumenes, his *Phalange* of foote being destitute of horse, first opened, and received the light-armed, (that had all this while fought in the front) into the midst of it. Then after-ward againe closed. And when Domitius Scipio's Lieutenant, incompassed it round with horse and light-armed, which he might easily doe, by reason it was thrust vp into a thicke *Plinthum*; it was driuen to great distress; being neither able to charge the enemy, nor yet to countermarch in so great depth, as it carried. It grieved them much, that their long experience nothing auailed them to annoy the enemy, and that notwithstanding they were subiect to arrowes, and darts at all hands. Yet, bearing out a multitude of pikes on euery side of their square, they called the Romans to come to handy blowes, and still made a countenance, as though they meant to charge, keeping themselves for all that within their Ranks, as being footmen, and heauy armed, and the rather, because they had to doe, with an enemy on horse-backe. Besides they were loth to breake the thicknes of their battaile, which forme they could not now alter. The Romans also, durst not approach them, and come to sword, fearing their experience in warre, and closenesse of array, and desperation. But running about here, and there, plied them with arrowes, and darts, whereof none was throwne in vaine, falling amongst a troupe so closely put vp together, that they could neither auoide, and decline any thing throwne, nor giue way, albeit they saw it comming. At last being weary, and irresolute what to doe, they retired easily, with a threatening countenance notwithstanding, and in good order, and not deliuering the Romans of feare, who durst not yet come neare, but sought to annoy them aloofe; till the Elephants placed in the Macedonian *Phalange*, being affrighted, and not to be ruled by their Gouvernours, troubled all, and gaue occasion of flight: hitherto Appian. Out of these three examples, the truth of that, which Aelian saith, is to be seene, that is, that the Macedonian *Phalange* can not be forced, or resisted by an enemy, (taking with all Polybius his caution) if it be in the right posture, and figure, and haue such ground, as is fit. The Romans the best souldiers of all antiquitie were repulsed by it at a siege, forced to retire in a battell, durst not come neare it, after they had gained the field of the rest of the Army. And the Consul Emilius, a man that had serue much seruice, and fought many a battaile, and was one of the best Generalls of that time, confessed, he neuer saw so fearefull a sight, as when he beheld the *Phalange* advancing into the field, the bodies ioyned, the Targets serred, and locked together, darting out fire like lightning, the front rough with couched, and charged pikes, and armed with yron, and threatening present death to him, that durst approach.

3 Occupying two Cubits of ground] We may not take it, as though the souldier betwixt file, and file had two Cubits, or three foote of ground. For we learned before that in locking vp the *Phalange*, the distance betwene man, and man in front was but a Cubit. But it is to be understood betwene rank and ranke. For Polybius saith, that the souldier ought to haue roome for the vse of his weapon, which cannot be, without granting him three foote behinde, the pike being sometimes to be pushed forward, sometimes to be drawne backe, sometimes otherwise handled, as occasion of fight shall require.

The length of the Pike is 16 Cubits] ^a Sixteene Cubits, which is twenty foure foote, is a great length for a Pike, and it verifieth the words of Livy, that the Macedonian Pike is vnwealdy, by reason of the length, and weight; ^b See Leo cap. 5. § 2. & cap. 6. § 3.

yet doe wee read of pikes of that length. The ^b Ælians had such. The ^c Chalybes pikes were about 15 cubits long. ^d But 16 was the length at the first, the Macedonians brought it to 14, which they took to be a sufficient length against the enemy, and easier for the Pike-man to leave and handle.

4 The space in charging betwixt the handes taking vp two cubits. Herein is a difference betwene Ælian, and Polybius. Ælian would haue no more, then 2 cubits lost in charging; ^e Polybius saith 4. are lost, and with Polybius agreeth Leo. But the cause of the difference ariseth out of the forme of the pike, and of the manner of holding it in the charge. If it be held at the butt end with the right hand, and supported toward the armed end with the left, as the manner in charging is, it cannot lose above two cubits, and Ælian is in the right. But if, in holding it, you set the right hand 2 cubits from the butt end, then must 4 cubits of necessitie be lost. Whereof 2 rest behinde the right hand, the other two are taken up by the space betwixt both hands. Our manner of charging is at this day, to take the butt end in the right hand, and in so doing we loose but two cubits. But it seemeth our pikes are not made in that forme, they were in Polybius time. In Polybius age they had weights at the butt end to make the sharpe end the lighter, as the heauie pummell lighter eth the sword in handling. ^f This weight was called ^h secoma; as it were a counter-weight to the heuiness, and length of the pike. Neither do I read any thing elswhere then in Polybius, concerning the counter-weight of a pike. To the handle of an Oare, I finde in ⁱ Athenens, that lead was added, to make the part standing out from the shippe more light. But yet Polybius, and Ælians opinions may well agree, and in pikes that haue counterweights at their ends (the hold for charging being taken two cubits from the butt end) there may be lost foure cubits, where the other sort being held at the butt end it selfe, loose but 2 cubits.

5 The pikes of the other behinde, cannot reach to the first ranke. How shall they beare their pikes then? ^k Polybius sheweth, what the manner was. Those ranks, saith he, that stand behinde the fifth, can helpe nothing to the fight in front. And therefore they charge not their pikes low, but beare them towards their forestanders shoulders, the points somewhat erected to secure the battaile from aboue, intercepting by their thicke lying the misliue weapons, which flying ouer the front, would otherwise fall vpon their heads, that are placed toward the reare. Polybius saith the manner was, (neither to charge, nor order their pikes, but) to beare them forwards sloping towards the shoulders of their companions before. Test by bearing them so, what security they could haue from the misliue weapons, that came aloft, I cannot yet conceiue. An arrow, dart, or stone, vnlesse it hit iust on the middest of the pikes, would do as much, and sometimes more, harme by glancing, then if it had not touched them at all.

Some would haue the hinder pikes longer. The opinion of them, whom Ælian here speaketh of, hath little reason to ground vpon. For either the pike of th^m that come in the five ranks behinde, especially the two last, must exceede in length, or else the file-leader pikes in shortnesse, both which are like vnprofitable. If they bee too long, they cannot be wielded, if these too short, the enemies shall reach the file-leaders, and not the file-leaders the enemy. The measure of the longest pike was 16 cubits, which yet for aptnesse and use was by the Macedonians reduced to 14. Say then the sixteenth ranke carrieth pikes of 16 cubits; two of the cubits according to Ælian, are taken away in handling, or euen by reason of the distance of the five former ranks. Foure cubits alone remaine, and reach ouer the front. If the file Leader in the front shorten his pike to foure cubits to make an euen extension, he shall not come neere the enemy by ten cubits, who in pushing will reach home to him. For what length soeuer, is taken from the file-leader in front,

front the same is giuen to the enemy, that pusheth with him. And hee shall bee able to wound the file-leader, and not the file-leader him, especially the pikes differing in so great a proportion.

6 The superordinarie Lieutenant of euery Syntagma. I haue before noted the dutie of a Lieutenant of the Syntagma, and it is here well expressed by Ælian. He, that desireth to see more touching the same, let him resort to Xenophons Cyropædia: lib. 3. 28. and lib. 7. 178. B. and to Leo, cap. 14. § 79.

The place of the light-armed, and the number of euery file.

CHAP. XV.

Thus much of ordering and marshalling the armed-foote. I will adde a word, or two, of the light-armed, or naked. ^a The Generall is to place the light-armed so, that they be readie for all attempts of the enemy, sometime in front, sometime in flanke, sometime in the Reare, according to occasion or necessity. For our purpose let them be thus ordered: We will frame also of them 1024 files as many, as the Phalange of the armed contained; So that the first file of the light-armed be placed directly behinde the first file of the armed, and the second file behinde the second, and so the rest. ^b Yet shall they not be sixteene to the file, but halfe so many, namely eight; so that in 1024 files there shall bee eight thousand, one hundred, ninety two men.

Notes.

^a **H**itherto all things concerning the arming, filing, embatteling, number, command, distance and precedence of the armed are declared; and likewise, of the arming of the light and somewhat of their place. Now followeth the filing, ranking, and place more exactly, and their manner of embattailing, with their seuerall bodies, and commands.

^b The Generall is to place. I haue spoken somewhat before of the placing of the light. I will now anely adde a passage of Leo tending thereunto. ^a Leo saith thus, you shall range the Archers behinde the reare of euery file according to the number § 69. of the file, (that is foure light for twenty six armed, proportioning an Archer for euery foure armed. Or if it be needfull, you shall order them within the files, an armed, and an Archer. Sometimes without the wings of the battaile; that is within the Horse. Oftentimes without the Horse a little distance, with a few Targetiers, to defend the vttermost flanks of the Horse. And this is to bee done, when you abound in multitude of light-armed. But those, that vse small darts, and iavelins, and such like are to be placed, either in the reare of the armed, or in the wings of the battaile, and not in the middest. The slingers are alwaies, to bee set in the wings. Thus Leo placeth his light armed. But Ælian here (as before in the sixteenth Chapter) designeth their place in the reare, but so, that hee leaueth it to the Generalls choice, and to the occasion of seruice to place them, as most befitteth. Being set behinde, as Ælians order is, they must answer the armed in number of files, & be directed by the files of the armed for their standing; that is euery file of the light-armed is to order it selfe in a right

right line after a file of the armed in such manner, as the armed are before embattailed.

Ælian in the beginning divided the foote into three parts, Armed, Targetieres, and light-armed. To the armed he hath given place, and maketh the Phalange so consist of them, the light-armed being in the reare of the armed, what shall become of Targetiers? for he speaketh not a word of placing them. By this I read in Artian I would think, they were placed amongst the light-armed, and next to the armed. First because Ælian saith, many number them amongst the light. Then I see the Hypaspists placed betwixt the Horse, and the armed in Alexanders fields at Granicus, at Issos, and at Gaugamela; Lastly Leo in the passage before recited, when he placed the light-armed without the Horse, he joyneth Targetiers with them, for their safeguard. Cyrus likewise placeth them next the armed in the reare; and after them the Archers.

2 Yet shall they not be 16. The file of the light-armed is lesse in number, then the file of the armed. For if they should be 16 in file, the number being but halfe to the armed, they should not be able to make about 512 files, and breeding there by a disproportion both in placing, and correspondence one to another, not equall the length of the Phalange. Besides standing eight in file, and in the reare, their flying weapons will be sent with more force against their enemies; In as much as the hindmost of them are neerer the enemy by twentie foure foote, which the last eight in a file of 16 deepe take up. And misse weapons, the lesse their compasse is, when they are sent against a mark, with more violence they pierce. As they hurt not greatly, if the distance be too farre, from whence they come.

The names of the bodies of the light-armed.

CHAP. XVI.

Their names and degrees are these. Foure files of light-armed are called 1 a Syssafis of 32. men. Two Syssafies 2 a Pentecontarchy of 64 men. Two Pentecontarchies 3 a Century of 128 men. In every Century ought to bee 5 Superordinarie men: an Ensigne, a Reare-commander, a Trumpetter, a Sericant, and a Crier. Two Centuries containe 256 men, and are called 4 a Psylagy. Two Psylagies a Xenagy of 512 men. Two Xenagies a Systemma of 1024 men. Two Epixenagies a Stiphos of 4096 men. Two Stiphos an Epitagma of 1024 files, 8192 men. These ought also to haue 8 Superordinarie men, whereof foure should bee Epixenagies, the other foure Systemmatarchs.

Notes.

As the armed were distinguished, and seuered into diuers bodies in the Phalange, so are the light-armed, in whom there ought to be no lesse order, then in the armed. A multitude undigested bringeth with it disorder, and confusion. Neither can any service be expected from them, who by apt diuisions are not cast into bodies fit for service. We haue before spoken of the names of the bodies of the armed, and noted, that they were not imposed with such propriety, that they could be applied to no other thing. At the first warre was made, and men fought (as wild beasts grapple together) led with furie, and rage, and not with skill: and he prevailed that was the strongest. Experience taught there were advantages in Time, in Place, in Order, in instruments of fight, in placing of men, and

in

in other circumstances. Hence sprung the Art of Warre, the diuers formes of weapons, and the figures of Battails. For the speedy framing whereof, the smaller bodies were invented, of which they consist. In building of a house, you first bring timber together, and other matter, and then of it frame walls, doores, windows, rafters, beames, and the roof, which must be all conioyned together, before the fashion of the house will appeare: So in an Army the prouision of men was first requisite, which being found, and brought together by Leauies, were armed, and after ordered into seuerall bodies; and these being compacted together, set out the frame and fashion of the Phalange. And as all things newly invented, stand in neede of names to ascerne them from other things; So names were giuen unto the bodies not proper, and fit; but such as military wits thought convenient enough to signifie the things they meant. I haue noted it before in the names of the Tetrarchy, Taxis, Syntagma, and other, and it will appeare againe in this Chapter.

But he

right line after a file of the armed in such manner, as the armed are before embattailed.

Ælian in the beginning divided the foote into three parts, Armed, Targetieres, and light-armed. To the armed he hath given place, and maketh the Phalange to consist of them, th. light-armed he rangeth in the reare of the armed, what shall become of Targetiers? for he speaketh not a word of placing them. By this I read in Artian I would think, they were placed amongst th. light-armed, and next to the armed. First because Ælian saith, many number them amongst the light. Then I see the Hypaspists placed betwixt the Horse, and the armed in Alexanders fields at Granicus, at Issos, and at Gaugamela; Lastly Leo in the passage before recited, when he placed the light-armed without the Horse, he ioyneth Targetiers with them, for their safeguard. ^b Cyrus likewise placeth them next the armed in the reare; and after them the Archers.

2 Yet shall they not be 16.] The file of the light-armed is lesse in number, then the file of the armed. For if they should be 16 in file, the number being but halfe to the

7000.

in other circumstances. Hence sprung the Art of Warre, the diuers formes of weapons, and the figures of Battails. For the speedy framing whereof, the smaller bodies were invented, of which they consist. In building of a house, you first bring timber together, and other matter, and then of it frame walls, dores, windows, rafters, beames, and the roof, which must be all conioyned together, before the fashion of the house will appeare: So in an Army the prouision of men was first requisite, which being found, and brought together by Leauies, were armed, and after ordered into severall bodies; and these being compacted together, set out the frame and fashion of the Phalange. And as all things newly invented, stand in neede of names to ascerne them from other things; So names were given unto the bodies not proper, and fit; but such as Military wits thought convenient enough to signifie the things they meant. I haue noted it before in the names of the Tetrarchy, Taxis, Syntagma, and other, and it will appeare againe in this Chapter.

But here I may not pratermit the curiositie of the Græcians in their appellations, and their plenty of speech, apt to give diuersitie to things, that are diuers. For where there are homes, amongst armed, and light-armed, which consist of the same number, and therefore, as it seemes, might well enough haue bene comprehended under one name, they notwithstanding to auoide confusion, and for perspicuities sake haue thought good to call them by sundry names. Thirty two armed men are called a Dilochi; 32 light armed are a Systalis; 64 armed are a Tetrarchie; 64 light armed a Pentecontarchie; 128 armed a Taxis; 128 light, a Hecatontarchie. Our tongue will not afford such variety. For albeit in common speech we distinguish the kinde of souldier; yet confound we the name of the body, and of the command. A certaine number of Pikes under a Capitaine we call a company of Pikes; So many shot under a Capitaine we likewise call a company of shot. The Capitaines, one a Capitaine of Pikes, and the other a Capitaine of shot. A company of Curacers of horse, we call a troope of Curacers; as many Argoleters, a troope of Argoleters. The Commanders of either of them we terme Capitaines, the one of Curacers, the other of Argoleters. But let vs come to particular explication.

1 Asystalis] It commeth of Synistemi to stand together: and asystalis is a standing together; which word albeit it may be extended to any kinde of people assembled, and standing together; yet it is here appropriated to souldiers; and more particularly to 4. files of light armed, consisting of 32 men, 8 men going to the file.

2 A Pentecontarchie] The command of 50 men. And so it was used of old. But the Macedonians gaue 64 men to this command, and yet retein'd the name, because it was familiar, and well knowne.

3 A Century] Ælian calleth it a Hecatontarchie, the command of a 100 men. The name was vsuall before the Macedonians time, and it conteyned 100 men. But the Macedonians gaue it 128 men. This was answerable to the Syntagma amongst the armed, and had the like officers. Yet whether it had a Capitaine, or no, may be some doubt; the rather because Ælian in this Chap. nameth no Commanders, but Systrematarchs, and Epixenagies; and those he would haue super-ordinary. For my part, I thinke they had Centurions also. For as euery body of the armed had a head, so I would thinke it requisite also amongst the light-armed, especially seing there was a Bringer-up, and other officers belonging to a Company; which wlesse they had a Commander, would become unprofitable. For if there were no Capitaine, to whom should the Crier, or Trumpet, or Sergeant of the Centurie resort for direction? Adde, that the light were often drawne to the winges, to the front, or other places of seruice, which could not be done without Leaders. For to put a Systrematarch, or an Epixenagie to lead a Century, were to leaue the rest of the Centuries under them without a Commander. Besides,

the

the Macedonians were very particular in their commands, and lest no body without a head, which is the cause of the multitude of Commanders in the Phalange. But they are not here mentioned. No more are the Commanders of the horse in the division of the bodies of the horse, and yet I thinke no man will doubt, but the horsemen had Commanders. Lastly, I finde in the Græcian historie, Captaines of the light-armed often named. Epithenes is said to be Commander of the Targetiers, in a fight the Græcians had against the Persians. Stratoles commanded the Cretan Archers in the returne of the Græcians out of Persia. Eurybates Captaine of the Cretan Archers in Alexanders army was slaine by the Thebans at the siege of Thebes. When Antiochus the Captaine of the Archers was dead, Ombrio was chosen in his place. Mention is made also in Arrian of Clearchus the Captaine of the Archers. And when Elian calleth the 4 Sytremmatarches, and the 4 Epixenages super ordinary (Ectactous) he might have said as much of all the other Commanders. And he saith expressly of the officers of the Centurie, that they were super ordinary (Ectactoi).

4 A Pylagi] The word is a body of light-armed. Which word, if it were taken, as it naturally signifieth, is common to, and comprehendeth all the bodies of the light-armed, whereof Elian speaketh in this Chapter. But here it is restrained to a body of light-armed, which compriseth 256 men, and 32 files, and so it is to be taken.

A Xenagie] That is, a command of strangers. Elian before saith, that a Syntagma was by some called a Xenagie. I have given my opinion there of the originall of the word, which I neede not to repeat here; This onely I will note, that of all the bodies of the light-armed, no one hath a common name with the body of the armed, but onely the Xenagie. And Elian giveth also that body of the armed another name, calling it a Syntagma. The Xenagie hath in it 512 men, and 64 files.

A Sytremma] It signifieth a conglobation, or trouping together. Proper names are wanting for these bodies, and therefore such taken, as might at any hand signifie the thing meant. In continuance of time use hath gained a passage, and made them to be accepted as proper enough. The Sytremma containeth 1024 men, and 128 files. There is nothing to be found in Elian of the Chiliarchie of the light-armed; Yet doth Arrian mention 2 Chiliarchies of Archers in the Army of Alexander.

An Epixenagie] A command above a Xenagie; As afterward in the command of the horse, there is an Ephipparchie above a Hipparchie. The word is improper and hard enough, but when it is received by use, what should we seeke for more? It containeth 2048 men, and 256 files.

A Stiphos] It is derived from steibo, to thicken, and in penury of an other name, this body of the light-armed is called Stiphos, because they are thickened, and thronged together. There is in it 4096 men, and 256 files.

An Epitagma] Is the last body amongst the light-armed. The signification of Epitaxis is to place behinde. From thence cometh Epitaxis, placing the light-armed in the Reare, which word is after used by Elian. Epitagma is derived from the same fountain; and it is called Epitagma, not of placing behinde, (for sometimes they were placed before, sometimes in the flanke) but it was the best name they could give to the whole light-armed. And yet it may be, that because all the light-armed in ancient time were placed behinde, the whole masse was called Epitagma, as being placed after the armed in the reare. The Epitagma hath in it 1892 men, and 1024 files, for so many light-armed attend the Phalange.

Eight super ordinary men] Why these eight men should be super ordinary more than the rest of the Commanders, I conceive not yet. If Elians meaning be, that these alone shall command the light-armed, historie and practise of ancient times convince the contrary.

contrary. Besides where he nameth foure Epixenagies, it agreeth with the number, that are in the Epitagma of light. But where he addeth foure Sytremmatarches more to make up the number of the eight Super ordinary, it is hard to knowe, which foure he meaneth, considering there are eight Sytremmas in the Epitagma.

Now because the files of the light-armed are in embattailing to be marshalled to the files of the armed, I thought good to set downe, how the bodies of both agree, by comparing them together. Files not in number of men. For in number of men they cannot well agree, because the file of the armed hath more, then the file of the light-armed. And the number of the armed in grosse is 16384. of the light-armed but 8192. And I will first begin with the Sytaxis, because it is the least body of the light.

The use of light-armed foote.

CHAP. XVII.

DARTERS, Archers, and all other, that use flying weapons, are good 1 to begin the fight 2 to prouoke the enemy, to breake and shatter armour, 3 to wound, annoy, and beare downe a farre of; 4 to disaray the enemy, 5 to repulse their horse, 6 to beat in their light-armed, 7 to discouer suspected places, and to lay Ambushes. Lastly these first undertaking the Skirmish, and continuing it with the rest, and seconding them, and seruing 8 for speedie, and farre-of-attempts, worke many, and great effects in fight.

Notes.

THE arming, place, filing, bodies, and command of the light-armed are hitherto handled: Now followeth the use, and seruice they performe in the field. And first wee are to thinke of the body of an armie, as of the body of a man, that is compact of severall parts: Of which some parts are of more use then other. Some being able to performe their function without the helpe of the other, some except the other helpe, can doe nothing to purpose of themselves. The parts of an armie are like. The armed are the strength of the field, and are the refuge for the rest in extremitie. The light ioyned with the armed, worke great effects (those which Elian speaketh of in this Chapter and many more) without them they cannot so much as maintaine a place in the field. And as Xenophon saith, a Xenoph. Cy. 1. 1. 7. 189. C. Let them be neuer so many in number, yet dare they not stand or abide a fewe armed. In which respect, a place fit hath alwaies bene sought for their seruice, to secure them from the accesse of the Horse, or of the enemies armed. Which place was either behinde

b. 1. co. cap. 14.
§ 121.

inde the Phalange (as Ælian here would haue it) or else in the wings betwixt the Horse, and the armed, or if they skirmished loose before the front, and chanced to bee pressed with the enemy, they retired into the interualls, and conueied themselves behind the Phalange in safety. Leo saith, if there be any place of strength, it will much helpe the light-armed. For after their flying weapons spent, retiring thither, they will be in more securitie, as a steepe rockie place, or the bancke of a riuer, or a high hill, or such other. Our stories report, that at the battaile of Agincourt in France 200 English Archers were bestowed in a meadow fenced with a deepe ditch; from whence they so gauled the French horse and foot, that they were a great helpe to the victorie. The like happened before at Poitiers, where that braue Prince of Wales eldest sonne of Edward the third, hauing to fight with the whole power of France vnder the leading of their King, gaue safegard to his Archers, with hedges, and ditches, and other strengths. So that the French horse hauing no accesse to disorder them, were ouerwhelmed with the tempests, and stormes of their arrowes, and such a victory obtained by our nation, as might match the most renowned of all antiquitie. To say nothing of the inuention which Henric the fifth used against the horse of France for securing his Archers. The storie saith, he deuised stakes of two yards long, and armed both ends with pikes of iron, the one to sticke into the ground, and the other to gall, and enter the horses bellies, in case they came to charge our Archers home. By means whereof he caried the famous victorie of Agincourt. This for the assurance of the light armed, when they come to fight, without which assurance, their seruice would be weake, and scarce worth the hauing. Their seruice then according to Ælian hath many particulars. And they are good to

Prouoke the enemy] If the enemy be in a wood, a fenae, a hill, a fort, a towne, or other place of strength, that admitteth no accesse, the manner hath bene to send out the light armie to shew themselves, and with a Brado to towle him out of his aduantage, and bring him into the field, where he may more easily be dealt withall. Examples are plentifull, but I will content my selfe with a Macedonian example. Alexander leading his armie against the Triballs, that had hid themselves in a wood, commanded his Archers, and Slingers to runne out, and to shoote, and sling amongst the Barbarians to see, if he could towle them into the plaine. The Archers, and Slingers spared not to let flie, and the Triballs being wounded with arrowes, threw themselves out of the wood with all speed, to fall vpon the vnarmed Archers. Alexander presently commanded Philotas with the Horse of vpper Macedonia to charge the right wing, on which part they cast out themselves furthest. And Heraclides, and Sopolis with the horse of Bottia, and Amphipolis the left, himselfe stretching out in length the Phalange of foote, & setting the rest of horse before the Phalange, led against the midst of the enemy. As long as it was but a skirmish, the Triballs had not the worst. But after the Phalange close serred came vp roundly to them, and the Horsemen charged them no longer with darts, but pressed, and ouerbore them with their horse, they fled thorough the wood to the riuer.

To beginne the fight] Leo agreeeth. If saith he, we haue light-armed enough, let them, before the armie ioyne, send their darts, and arrowes at the enemy, and after the fight of the armed is begonne plie the flanke with their misliue weapons, that at once both their flanks may be assaulted. It hath bene and is now the ordinarie course to beginne the fight with the light-armed. And because wee shall read of no battaile almost wherein it was not so, I will forbear examples.

To wound a farre off] The light seruie to great purpose, if the General desire not to come neere to fight, but seeke to annoy his enemy a farre off without danger of his owne folkes. Liuy telleth of Cn. Manlius Volsio, that being to make warre against the Gallo

Gracians, that fled into the mountaines, and awaited the Romans there, and sought to defend themselves, by aduantage of the place, he prepared great plenty of darts, arrowes, bullets, and small stones for Slinges: and leauing his legionari. souldiers behind, led his light armed, against the enemy, that possessed certaine straights, by which his armie must passe. After some fight the Gallo-Gracians being not sufficiently armed, to defend their bodies from the misliue weapons, the light-armed of the Romans forced the passage. And following them euen to the Campe, where their Companions came to their aide, they first droue them into their Campe, and after the Legionarie Souldiers comming up, they wonne it. I haue before rehearsed the historie of Iphicrates, who with his Targetiers (that came seldome to hand blowes, but plied the enemy with darts a farre off) ouerthrew and slew a whole Moira of the Lacedemonians. The Acarnans, likewise with this kinde of fight, much incumbered Agefilaus, that made an excursion into their Countrey. The story is this, Agefilaus hauing taken a great prey, in the territory of the Acarnans, rested that day, where he had taken it, being busie in selling of it. In the meane time many Acarnan Targetiers assembled themselves together, where Agefilaus was incamped vpon the side of a mountaine, and with darting and slinging, they forced his Campe to descend to the plaine, themselves in the meane time being free from hurt. The next day Agefilaus led away his armie. The passage out of the place was straight, by reason of the mountaines lying about in a circle, which the Acarnans possessing, plied the Lacedemonians with darts, and stones, from the higher ground, and sometimes descending to the skirts of the hills, they pressed the armie so, that it could not move forward. And when the armed, foote, or horse, fell out vpon them, they profited little: For the Acarnans retired immediately, to their strength. Agefilaus perceiuing it would be hard for his armie to winde out of those straights, so long as the enemy so hung vpon them, resolved to charge those on his left hand. For the ascent on that side was more easie, both for his horse, and armed foote. Commanding therefore, his men to charge, the armed (of 29 yeeres of age) first fell on, and the horse after them vpon the spur. Himselfe followed with the rest. The Acarnans therefore, that were descended, and busie a darting, were quickly put to flight, and many flaine in seeking to remount the hills. But their armed foote, and most of their Targetiers, stood imbattaile on the toppe, and from thence both threw other misliues, and lanced lauelines, wherewith they wounded horsemen, and killed some horse. But being ready to be charged by the Lacedemonian armed, they fled, loosing some 300 in the flight. These light-armed then, as long as they can keepe aloofe from the enemy, annoy them sore by wounding (as Ælian saith) a farre off; as soone as the armed come up, they are glad to quite their place, and saue themselves by flight.

To disarray] So long as a battaile remaineth in order, no victorie is gotten against it. Breaking of array, and disbanding, are companions of flight, and of forsaking the field. The armed, that are to endure the efforts of the light armed, must either keepe still their order, and suffer themselves, to be knocked downe, and flaine, as they stand, or else provide for themselves, by flight, or by yielding. For the light-armed effect with their misliue weapons the one, or the other. An example may be seene in the Egyptians in Cræsus his battaile, who after the defeat of the rest of the armie, maintained yet the fight, and yielded not to Cyrus, though he had now the victorie. Cyrus at the first charged their backs with his horse, and being not able to breake them, was faine to command his Archers, and darters, to shoote and cast their darts at them: wherby the Egyptians after many wounds, and losse of their people, were finally constrained to yield. A like example is before alledged of Domitius the Lieutenant of L. Scipio, who with misliue weapons alone forced the Macedonian Phalange to scatter, and take them liues to flight.

To

5 To repulse their Horse] The light armed alone, without a sure retreat to the armed, or else some place of strength, can doe little in repulsing of horse. I have shewed before in the exploits of Crassus into Persia, how the light armed were beaten by the Persian horse, and by the shew of wounds, they received, and with their feare, discouraged the armed. The like happened in Antonies retreat out of Persia, the light armed being faine to shroude themselves from the Persian horse within the Phalange of the armed. But they neuer so many, without some such assurance the horse will soon over-runne them; having this assurance their service much afflicteth horsemen both in wounding them, and in killing their horse. I therefore of ancient time it was usual to mingle horse, and light armed together. For the enemies horse so charged, cannot be able to resist both. A notable example is in Hartius: Caesar, saith hee, hauing a iourney in hand, and but a small number of Horse, and legionary Souldiers, was in his way set vpon by the enemye abounding in store of Horse, and of light armed Numidians amongst them. And when the Souldiers of Caesar fell out to charge, the enemies horse galloped away, and the foote stood fast, till the Horse with a full career returned to the rescue. This kinde of fight troubled Caesar much, and would haue troubled him more, had hee not recovered hills, that were not farre of, and by that meanes shaken of the molesting enemy. And for repulsing horse there is no better meanes for the armed foote, then with the light armed to line that part of the battaile, where the horse shall be about to giue on.

6 To beat in the light armed] The light armed being nimble and quick, and seeking alwaies advantages by changing of ground, can neuer be forced by the armed foote, (who are charged with heauie furniture, and by reason thereof can make no speed) to seeke succour in the battaile of their armed. Either they must be beaten in by the horse, or by the contrary light armed, as Aelian hath heere. The Horse are commonly to encounter with Horse, and the light armed with light armed, amongst whom the greater number preuaileth, their skill, and armes being alike. For the fight being a farre of, many will sooner wound, or kill a few, then a few many, saith Xenophon: If the fight bee at hand the better armed, or better minded will drine the other out of the field. The Roman Horse, and the light armed, were too hard for the Macedonians, and chased them to their Campe. And that happened by reason their armour was fitter to close, and to fight at hand. So our Archers at the battaile of Cressly compelled the Genua crosse-bowes to forsake the field, the english bowe being better in use, then the Genua crosse-bowe. When they haue made the contrary light armed to quit their place, they are at liberty themselves to serue, where most advantage may be had of their service.

7 To discouer suspected places, and lay ambushes] Suspected places are such for the most part, as ambushes are laid in. Ambushes are of two kindes, being laid either to endamage the enemies battell in the field, or to hinder, and disapoint his march. The places, such as are removed from sight, and had neede of speciall discouery. As woods, mountaines, Forrests, rockes, bankes of riuers, caues, hills hollow, and deepe waies, and the like. The most part of which are rough, and intricate, and scarce passable for the heavy armed, and horse. But the light armed, that are not incumbered with weight of armes, & able quickly to aduance, or retire, are fittest to lie close in such places, or to search if the enemye be lodged there. For the first kinde of Ambushes wee read, that both heavy armed, and horse haue been employed. The warres of Anniball in Italy afford plenty of examples herein. For the other, which is to beset or discouer waies, there are none so fit, as the light armed, whose quicknes, and expedition, giueth them advantage to assault their enemy with their misse weapons, though the ground be neuer so unequal, and meanes to view any place suspected without almost any danger of their owne.

*The fashion of Horse-battailes: and first of the Rhombes,
the Wedge, and the Square.*

CHAP. XVIII.

Those, that haue written before mee, haue diuersely framed *Horse-battailes*,
some of *just squares*, some longer in *flanke*, then in *front*, some like a *Rhombe*,
some like a *Wedge*, but none of them haue (if I may speake freely) expressed fully
their owne conceits. Therefore to make all things cleere, and better to bee vn-
derstood, I will set downe the seuerall figures of each seuerall kinde.

¹ It seemeth the *Thessalians* whose power was great in Horse, were the first, that
used the kinde of battaile ² fashioned in forme of a *Rhombe* (the inuention where-
of is attributed to *Iason*) as fittest for all encounters; The *Horsemen* thus ordered
being ready to turne their faces euery way with speede, and not easie to bee sur-
prised in *flanke*, or in the *Reare*. Because the best men stand in the *flanke*, and the
Commanders in the *Angles*, as namely the Captaine of the troupe in the front,
and in the right, and left *Angles* those, that are called *Flanke-commanders*, and
the Lieutenant in the *Reare-angle*.

³ The *Scythians*, and *Thracians* haue used *Wedges*, and likewise the *Macedonians*
by the ordinance of King *Philip*. For this kinde of battaile was held of more ex-
act vse, then the *square*, because the Commanders are placed in a circle; and con-
sisting of a narrow front; it maketh readie passage thorough any distance, and an
easier wheeling and returning to the first posture; as hauing no such troublesome
windings about, as hath the *Square*.

⁴ The *Persians*, and *Sicilians*, and most *Gracians* made choice of *Squares*, being
of opinion they were more easie to frame, and fitter for ioint-mouing of the
Horse, and more effectually in vse. For they are sooner in order being digested
into

into files, and ranks, and in this order alone all the Commanders fall vpon, and charge the enemy with one maine force. Those are best *Squares*, that double the number of the length to the number of the depth. As when there are eight in length, and foure in depth, or tenne in length, and five in depth. These in number are of vnequall sides, but in figure foure *Square*. For the length of a Horse from head to taile compared with his bredth requireth more men in rank, then in file [to make vp the *Square*] Some allow thrice as many in length, as in depth, and thinke by that meanes a perfect *square* may be formed: because for the most part, the length of a Horse seemeth thrice as much, as the bredth betwixt his shoulders. Therefore they giue nine in front, and three in flanke. For a multitude of Horsemen yeeld not the same aduantage behinde, that foore doe, when in the depth of the Battaille they jointly thrust on; in as much as the Horse helpe nothing to the selednesse of fast resistance, being neither able to thrust those forwards, that are before, nor yet to linke, and knitte with them, and so to make one weight, as it were, of the whole body; and in case they presse vpon the forme, by disordering, and distempering their owne Horse, they annoy themselves more, then the enemy. Therefore it alwaies falleth out, that when there are as many Horse in length, as in depth, a *Square* of number is made, but the sides of the figure are vnequall, the depth exceeding the length in proportion: but when the figure of the Troupe is *Square*, the number of the sides and front, is vnequall.

Notes.

In the second Chapter of this booke, the armie was diuided into two kindes, footemen, and Riders. Footemen againe into three, armed, Targetieres, and light armed. Of these three is hitherto treated. Riders follow, who either used Horses, or Elephants. Horses either alone, or else in Chariots. Of these *Ælian* treateth generally hereafter. For the arming, and place of Horse in the field, hee hath sufficiently spoken already. The following discourse is: First, of the manner of embattailing horse (wherein he setteth downe the diuersity of vsage in ancient time) Then of Chariots, and lastly of Elephants. ^a That a horse is a kinde of beast, that loues man, and is most faithfull vnto him Pliny testifieth. The use of him is for carriage, and for seruice in the field. And in the seruice of the field an armie without horse, is in a manner no armie. Iphicrates (as I haue said before) comparing an armie to a mans body resembleth the horse to feete. And as the body hath no power of moving, or rather remouing, the feete being lame, or taken away, so is the armie slow, and unfit for expedition, that is destitute of horse; and may be well resembled to those beasts, that creepe vpon their bellies, whose greatest hast is with little speede. The horse do great seruice in the field of themselves alone; and are principally employed in matters that require quicknesse in dispatch. Therefore are they fit for discouries, either of the enemies country, or of his campe, or of his marche, or of other things, whereof the Generall desires to haue notice. And not for discouries alone, but to spoile, and destroy, whatsoever the enemy hath growing, to make prey of his Castle, burne his houses, kill his people, surprize his places of strength, and to imbarre him from doing the like to vs; to bring and conuey prouision for our Campe, to (but in the enemy, that he goe not out his campe for like causes, to hinder the enemies march by falling on the rear). Briefely all expeditions of celeritie are for the most part deliuered to the horse alone. Especially as long as they are in such places, as giue them liberty to go on, or retire at their pleasures. Yet are they often ioynd with the light armed, as I haue shewed. They often ioyne likewise

^a Plin. natural. histor. lib. 7. cap. 56.

likewise with the armed. ^a And if they may come to charge the enemies battaille in the flanke, or reare, at such time, as our armed charge in front, they endanger all. But for employment alone against the armed foote many examples of former times shew, how weakethere force is. ^b And how little they preuaile (especially against armed, that are practized in fight, and resolute Souldiers) The examples I haue quoted in the margin make the matter cleare. For further confirmation I will set downe Xenophons opinion, which all be it, it were deliuered concerning the Persian horse, that came against the armed foote of the Græcians in their return out of Persia, yet the reason stretcheth to all horse in generall. His words sound thus: ^c If any of you faint in minde (said he to the Græcians) because we haue none, the enemy many horse, let him consider, that ten thousand horse-men are no more, then ten thousand men. For no man was euer slaine in battaille by byring, or stroke of a horse: Men they are, that performe, whatsoever is done in fight. As for vs (the foote he meaneth) our mounting is much more firme, and stedfast then theirs. They hange vpon their horse, and are in feare not onely of vs, but to be shaken of and throwne to ground. We contrariwise haue stable footing, and shall be able both with great assurednesse to strik, and direct our aime with more certainty. One aduantage the horse-men haue, they may more securely runne away. *Hitherto Xenophon. And so much is summarily spoken of the seruice of horse.*

^d The Thessalians, whose power was great in horse] The Thessalians inhabiting about the mountaine Pelus were the first, that fought on horse-backe, and were therefore called Centaures. When they watered their horses in the riuer Peneus, the horse heades stooping to drinke made the vnskilfull multitude, who saw the bodies of men ioynd to the shoulders of the horse, conceiue, that the upper part was man, and the neither Oxe. For it should seeme, horse were not so well knowne then, as Oxen, with which they laboured and plowed their land. The Poets therefore fained, that they were monsters compounded of two diuers natures, man and oxe, or bull; and that Centaurus, the beginner of the race was begotten by Ixion vpon a cloude, which was figured like Iuno. *Howbeit Seruius giveth a better originall of the name, saying, that certaine seruants of a Thessalian King seeing their masters Neate, raging with the Brimse (a flie that biteth cattell) got a horse backe, and pricking them with goades, reduced them to their stables; and that they were after called Centaures, Para kentein tou tauros, of pricking the neate. The great Etymologicon giueth yet another beginning of the name. For where I haue said that Centaurus was begotten by Ixion vpon a cloude, which was figured like Iuno, with whom Ixion was in loue: The Etymologicon saith, the sonne of Ixion, and of the cloude was called Centaurus: Apo tou ton patera autou kentein tauran. But ^e Diodorus Sicul. reporting the historie of the Centaures, speaketh not of Centaurus, the father of the race but saith notwithstanding, that they were bred of a cloude, and that the Nymphs brought them vp, and that they were the first horsemen, and therefore called Hippocentauri which gaue occasion to the fable, that they had two natures. It is generally agreed, that these Centaures were Thessalians, and that they were the first horsemen, that are mentioned in any history. And as they were the first, so by reason of their long practise ^f they were accounted the best, the most valiant, and the most expert horse-men of all Greece, euen to the time of Philip, sonne of Amintas King of Macedonia, who conquered all Thessaly (saith ^g Iustin) not of desire to make himselfe rich of the prey of that Countrey, but to winne to his armie the strength of the Thessalian horsemen. Whose seruice he used afterward in all his war. Neither did they lesse seruice to his sonne ^h Alexander, in whose greatest battailes their vertue clearely appeareth, and is especially commended by histories.*

^h Plut. in Pyrrh. rhus,

The Tacticks

thus also, principally by their valor, put the Romans to flight. * Agefilas returning out of Asia towards his Countrey led his armie through Theſſalie, and being much incumbered in his march by the Theſſalian horſemen, that were his enemies, hee charged them and ouerthrewethem, and pleaſed himſelfe maruellouſly therein, becauſe with troups of horſe, which himſelfe had raiſed, and diſciplined, hee had ouerthrowne the Theſſalians, that were (ſaith Xenophon) ſo highly renowned for horſemanſhip.

2 Fashioned and forme of a Rhombe] There are three kindes of horſe battailes mentioned by Elian, the Rhombe, the Wedge, and the Square. And the Square is either a juſt Square, or longer in ſlanke then in front, or in front then in ſlanke. The Rhombe was the inuention of the Theſſalians, and in that forme they uſually fought. But where he maketh laſon to be the inuention of it, he afterward expoundeth his owne meaning, attributing the inuention to Ileon the Theſſalian (from whom alſo it was termed Ile) but the chiefe praſtiſe to laſon. Euclide deſcribeth a Rhombe in this ſort:

b Euclid. lib.
1. deſinit. 3. 1.

A Rhombe is a ſquare figure, that hath the ſides equall, but the angles not right. That is, the ſoure ſides of the ſquare are of one, and the ſame length, but the points, which make the angles, are two of them ſtretched out in greater length, and become more ſharpe, two of them brought narrower together, and made more blunt, then the right angles of a Tetragonall ſquare. See the figure. It is the ſame figure in a battaile, that at this day we call the Diamond battaile, which is (ſometimes praſtiſed amongſt the ſhoote for ſhem, and euerſe ſake, but amongſt the horſe I haue not ſeene it praſtiſed. And as the ſquare goeth to charge with all the ſouldiers, that ſtand in one of the ſides, that is with the front, (for the front is but a ſide of the ſquare) ſo the Rhombe chargeth with one of the points, which is the front of the Rhombe. Whether of them is of moſt uſe in the field, I am not to determine. For the ſquare ſtandeth the praſtiſe of our daies, beſides the vſage of the Perſians, Sicilians, and moſt Græcians, as Elian ſaith. For the Rhombe the Theſſalians alone (which notwithstanding were acknowledged the beſt horſemen of Greece) vntleſſe we allow the Wedge for a parcell of the Rhombe, (a Rhombe being but a double Wedge, as making two wedges, when it is diuided in two) and then haue wee for the Rhombe not onely the Scythians, and Thracians (both nations very good Horſemen) but King Philip Amintas ſonne, and Alexander the great, and his ſucceſſours. Either of both ſerues haue their reaſons. For the ſquares they, that uſe them, held opinion (as Elian ſaith) that they were eaſier to frame, and ſitter for ioint mouing of horſe, and ſooner in order of file, and ranke, and that the Commanders iointly charged the enemy, which in no other forme could be done. For the eaſineſſe to frame I ſee no great difference, onely cuſtome, and uſe, muſt in euery forme, yea in the ſquares themſelues make the horſeman ready to know, and ſake, and keepe his place. The ſame may be ſaid for the ioint mouing of the horſe. Now to file and ranke is common to the ſquare with ſome Rhombes, and as ſoone done in the one, as in the other, the number of the troupe being once knowne, and euery horſeman hauing his place aſſigned, and the forme reſolued vpon, into the which it muſt be caſt. For where there are 4 kindes of Rhombes, one, that fileth, and ranketh; an other, that fileth, but ranketh not; the third, that ranketh, but fileth not; the laſt that neither fileth, nor ranketh (as Elian teacheth in the next Chapter) The firſt will finde no more difficultie, of filing, and ranking, then the ſquare, the two next albeit the one ranke not, the other file not, yet the want of filing, or ranking hindereth no more the readineſſe of framing them, then the uſe of filing, and ranking helpeth the other. The fourth is rather curious then profitable, as I take, neither doe I finde example of it. And it may be truly affirmed of it, that the ſquare is much eaſier to be fashioned. We ſhall haue occaſion to ſpeake of the laſt three in due place. Touching the ioint falling on of the Commanders, I confeſſe the aduantage is great. For when the beſt men (ſuch as the Commanders ought

of Elian.

to be) altogether fall vpon the enemy, they are very like to put hard to them. And as it is a great part of ſkill to bring many hands to fight, ſo is it no leſſe, to bring the beſt hands to fight. Many hands make light worke, the beſt hands ſure worke. Now for the Rhombe Elian alledgeth theſe reaſons. Firſt, that it is fitteſt for all encounters, becauſe the horſemen are ready to turne their faces euery way with ſpeed. Then, that they cannot be ſurpriſed in ſlanke, or reare, hauing the beſt men in their ſlanks, and the Commanders in euery point of the Rhombe. And cannot the ſquare turne faces euery way? They can, but not with the ſame aduantage. For the Rhombe, which way ſooner faces are turned, remaineth in the firſt forme. And whether it be to the right, or left ſlanke, or to the reare, it keepeth ſtill a euen ſides, and the men of moſt ſeruiſe in the ſides. Beſides that one point alwaies affronteth the enemy. Not vnlike a Calthrop, which howſoeuer you caſt it to the ground, hath one point bearing right up to wound the horſes feet: But the ſquare in turning faces to either ſlanke altereth the forme of the front. In a broad ſquare, the front at the firſt was longer than the ſides, faces being turned to either ſlanke the ſides become longer, than the front; contrariwiſe in the Herſe battaile. Beſides in ſuch turning of faces the ſquare leſſeth the aduantage of embattailing, the Commanders, that ſtood in the front, ſtanding now in one of the ſlanks, and being not able to charge the enemy iointly, (the greateſt aduantage of that firme) and ſo the front being without Commanders, is ſubiect, and in danger of ſurpriſe, where the Rhombe, which way ſooner faces turne, hath as many Commanders in the front, as at firſt. But let vs take the horſe ſquare in full ſtrength with all Commanders in front; whether ſhall that forme be better, than the Rhombe? I dare not affirme it. For where there are two kindes of fight; One with maine force, the other with ſleight, and Art; in the firſt I will preferre the ſquare, in the laſt the Rhombe. The ſquare for ſlaughtering and violent ouerthrowing, the Rhombe for piercing, and artificial breaking the enemies battaile, which laſt amongſt great Commanders hath alwaies bene accounted the beſt kinde of winning. In the ſquare all the Commanders fall iointly vpon the enemy, and becauſe they are ſuppoſed to be the chiefe of the Army, in all likelihood they will ouerthrow the forme, and ſlay many. Yet by reaſon of the length of their front, they ſticke man to man, and can make no farre entrance, and the victorie hangeth doubtful, till they haue ſlaine the moſt of them, that reſiſt, and ſo make the reſt to ſlie. The Rhombe contrariwiſe, being narrow, and pointed in the front, firſt forceth a paſſage with the point, which maketh way to the reſt that follow, and then without great labour piercing further, and further, breaketh the aduerſe battaile, & diſperſeth, and putteth them to flight, and after doth execution at pleaſure. Neither can I make a ſitter reſemblance, then by comparing the 2 figures, one to an axe, the other to a wedge, both inſtruments uſed for diuiding ſolid maſſes of wood. For the axe, albeit ſharper, than the wedge, yet hauing the edge drawn out in length, can not by any ſtrength be driuen ſure into the wood, but by doubling many ſtroaks, and by much labour commeth at laſt to diuide it. The wedge contrariwiſe, though not ſo ſharpe, being once entred, inſinuateth it ſelfe more by litle, and litle with the narrownes of the point, and maintaining the hold it firſt got, at laſt forceth it aſunder, though it be neuer ſo tough. So is it in the ſquare, and Rhombe: whereof the ſquare beginneth, and endeth with violence; the other uſeth firſt cunning, and mildenes, as it were, to enter: being once entred renteth a peece, and diſparteth all that ſtandeth in the way. The manner of our times alloweth not of Rhombes; Experience of former times highly prized them. I will inſiſt vpon the Theſſalians alone, who are accounted the inuentioners of the Rhombe, & fought alwaies Rhombe wiſe. Polybius had ſeene their ſeruiſe, and bene General of the Horſe in his owne country, and therefore able to iudge. He giueth this cenſure of them; * that in troups, and being imbat-
led, a Polyb. lib. 4.
278. B. C.

led, they could not be resisted: to fight man to man in single combat, they had neither will, nor courage. What then should be the reason, they should be so powerful in troops? No other, then the forme of their imbatailing, which forme was the Rhombe here mentioned by *Ælian*. In this forme they commonly beat the Græcian, and Persian squares, and gat the reputation of the best horsemen of Europe.

3 The Scythians and Thracians used the wedge] The Rhombe is of 4 sides, the wedge but of three: and halfe a Rhombe maketh a wedge, as will be shewed in the next Chapter. The wedge was used by the Scythians, and Thracians, and whether King Philip of Macedonia borrowed it of them, I am uncertaine. But I rather incline to thinke, that his Theban Master taught him as well the wedge, as other formes of battailes. The cause of my coniecture is, for that I finde that his fellow scholer Epaminondas beat the Lacedemonian horse at Mantinea in that forme. ^c Xenophon recounteth the storie to this effect: The enemy (they were the Lacedemonians) ordered their horse like a Phalange of armed in depth, without mingling foote with them: But Epaminondas made a strong wedge of horse also (for before he tells the Theban armed were cast into a wedge) and ioyned some foote with them, conceiving after he had cut in peeces the horse, he should not misse of ouercomming the other forces of the enemy. And so going to charge he was not deceived of his hope. Thus Xenophon. Of ioyning horse and light armed together, I have spoken before: And that they were light-armed, that Epaminondas ioyned to his horse, ^d Diodorus Siculus sheweth. By Xenophon then it is plaine, that not onely the Scythians, and Thracians, but the Græcians also, when they thought it convenient, used the horse-wedge, and that Epaminondas ordered both foote, and horse in a wedge. And considering King Philip was brought up in Epaminondas his Fathers house, and made partaker of the learning wherewith Epaminondas was instituted; it is like in erecting a new military discipline amongst the Macedonians, as he tooke many other things from the Græcians, so he borrowed this forme, having first seene the notable effect thereof at Mantinea.

Now *Ælian* bringeth reasons, why the wedge was holden better than the square. Let me with leave adde a word or two why I take it to be better than the Rhombe. And first it cannot be denied, that the wedge having the same manner of disposition that the Rhombe hath, that is a front ending in a point, where the Captaine standeth; two points of the two flanks, where the flanke-commander stands, the Lieutenant in the reare, and the best men in the flanks, but it must be as powerfull to open the enemies battaile, as the Rhombe is. Then it hath this advantage of the Rhombe that it bringeth more hands to fight. For let the Rhombe and wedge be framed of an equall number, the wedge in figure resembling the forepart of the Rhombe must have the horse, that should be ranged in the reare of the Rhombe, orderly couched within the 3 sides thereof: where by both the number of the horse in the sides is increased, and the bulke of the body betwixt flanke and flanke enlarged. And seeing both the Rhombe and the wedge goe to the charge with the point of their front, the wedge both hath the property to pierce, and enter the enemies battaile by art, and sleight, as well as the Rhombe, and doth it with more strength, because of the great number of hands in the sides, which all come to fight. Ioyne, that the hinder part of the Rhombe serveth onely to avoide surprizes, and worketh nothing in charging. For after the two flanke points are entred, the rest of the Rhombe growing narrower, and narrower toward the Reare, falleth further off from the enemy, and is content onely to follow the way, that was made to hand by the front, and flanks; without being able to strike a stroke; especially if it preserve the order it ought to keepe: whereas all parts of the wedge are effectfull, the point to enter, the sides euen to the flanke corners, where

b Diodor. Sic.
lib. 16. 510.
c Xenoph. hist.
Græc. lib. 7.
646 B.

d Dio l. Sicul.
lib. 15 pag 502.

where the Reare endeth, to dispart and disscuer; and finally to disorder the enemy, whereby the victorie ensueth. And if we may rely upon authority, the authority of King Philip will say much for the wedge. For vlesse he had held it better than the Rhombe, hee would not have chosen, nor accustomed his Macedonians to it, nor Alexander after retained it, if he had not bene of the same opinion. Neither did the euent acceine them: for almost in all battailes their horse thus disposed caried away the victorie. But, as I before noted, neither Rhombe, nor wedge have found grace in the eyes of the great Generalls of our daies, nor can we tell what to insist upon, till experience hath taught, how well these formes will agree with the weapons, and service of our moderne wars.

4 The Persians made choice of squares] The square is the third, and last forme of horse-battaile that *Ælian* mentioneth; whereof there are three kinds; one with a larger front, then flanke; an other with a larger flanke then front; the third, with front, and flanke equall. All these three were used amongst the Persians, and Græcians. For two of the first, Xenophon may witnes. When Agesilaus, after Tissaphernes (the King of Persia's Lieutenant in part of the lesser Asia) had broken truce with him, made an incursion into Phrigia, ^b Xenophon telleth, that the rest of his journey was without impediment, till he came not farre from *Dascylium*. There when his horsemen galloped to a hill to discouer the country, by chance the horsemen of *Pharnabazus* (an other of the King of Persians Lieutenants) being about the same number that the Græcians were, and sent by *Pharnabazus* vnder the command of *Rathynes*, and *Bancaus* his bastard brother, galloped vp the same hill, and discovering one the other no further of, than two parts of a furlong, at the first they stood still; the Græcians ordered Phalange-wise 4 in depth, the Barbarians making their front 12 in length, the depth many more. Afterward the Barbarians began first to charge. when they came to hands, all the Græcians that ioyned, broke their staves. The Persians hauing Corneil darts killed some 12 horsemen, and 2 horses. Hereupon the Græcians fled. But when *Agesilaus* came with the Armie to the reskew, the Barbarians againe forsooke the field. The Persians then used a square longer in flanke, then front: The Græcian a square longer in front, then flanke. But which of the three squares is most to be esteemed *Ælian* sheweth in the words following, saying those squares are best, that

^b Xenoph. Hist.
Græc. lib. 3.
498 D.

5 Double the number of the length, to the number of the depth] What the length, and depth in a battaile are, we have seene before. Yet to understand *Ælian* the better, let vs repeat, that the length of a battaile is the extension of the front; the depth the extension of the flanke. To double then the number of the length to the number of the depth, is to place twise so many men in front, as in flanke. As for the purpose, 6 in front, 3 in flanke; or 8 in front, 4 in flanke; or 10 in front, 5 in flanke. And that this was the manner of the Lacedemonians appeareth by the ⁱ Oulamos, or horse-troupe instituted by *Lycurgus*, which was figured Tetragonally with 4 equall sides, and contained in it 50 horse. Now that it could not be a square of number, that is, to haue as many horse in flanke, as in front may hereby be shewed, because no square number will make 50. The nearest is 7 times 7, which amounts to 49. But proportioning the number of the length double to the number of the depth, that is 10 in front, and 5 in flanke, euen 50 will arise. So that the horse troupe of the Lacedemonians had the number of the length double to the number of the depth, and made a square in the equality of measure of the sides, not in numb. r. which is the Tetragonall figure, whereof *Plutarch* speaketh. And where *Xenophon* (as I have alledged before) reporteth that the horsemen of *Agesilaus* were but 4 in depth, it hindereth not this truth. For, as I noted before, the ordinary array of the Lacedemonians foote was 8 in depth. Yet did *Pausanias* the Lacedemonian

ⁱ *Plutarch* in
Lycurgo.

King

Leo cap. 11.
9-40.

King cast his men into a deepe Phalange against Thrasibulus. Other examples I haue al-
 ledged in the same place touching the same matter. Besides this appeareth to be but a mu-
 ltimous fight either of the parties comming suddainly in the sight of the other, and
 going presently to charge, before they could haue time to alter the order they then were in.
 And so say the horse troupes of the Lacedemonians ought to haue bene but 4 in depth,
 it must thereof necessarily follow that they were 12 in length, which yet will come: (short of
 50: 4 times 12 makes but 48. Indeed Leo holdeth opinion, that in a horse bataille, the
 depth ought to be no more than 4. I will set downe his words as neare, as conveniently I
 can english them. The depth, saith he, or thicknes, as it was of ancient time limi-
 ted, is sufficient, if it be of 4 horse in euery troupe; because in horse a greater
 depth will be idle, and to no purpose. For they cannot, as foote doe with their
 thicknes, thrust one an other forward from behind; and so the foremost, will they,
 or nill they, are forced to goe against the enemy. And this is done amongst foote.
 But the horse can not thrust forward those, that are before them, nor the file-leaders
 that stand in front, be seconded in that kinde by the rest, that stand in depth after
 the fourth man. For if they be *Lancers*, the fift ranke cannot reach with their
 launces to the front. If Archers, they shall be faine to shoot aloft for feare of
 hurting their companions before; and so their arrowes serue for no vse, after fight
 is ioyned. Therefore is the number of 4 sufficient in depth, as I haue said. This was
 the opinion of Leo. To which I cannot absolutely assent; vnlesse he had giuen 8 for the
 front of his troupe, and so made it of 4 equall sides in figure, not in number, as Elian
 requirith to be done in the best squares. For the reason of launces not reaching to the
 front in the fift ranke, reacheth not home to the reason of warre. Elian before hath de-
 clared, that the pikes of the seventh ranke reach not to the front of the Phalange. Yet
 no man will thereof inferre, that the Phalange ought to be but 6 deepe. Yea but the foote
 that come after, helpe the foremost, seconding them, and thrusting them on with the weight
 of their bodies, which the horse can not doe. This must be granted to be an advantage, that
 foote haue aboue horse in depth. Yet are there other reasons also of giuing depth to a Pha-
 lange: In the order whereof two considerations concur; one of offence, the other of de-
 fence. The reaching of pikes or horsemens stauies ouer the front is good for offence, that is
 to annoy the enemy in the stocke: likewise the thrusting on of those that come behind, ser-
 ueth with the violence to make them giue ground. A reasonable depth is for defence, in as
 much as it defendeth a Phalange against the induour of the enemy to breake it a sunder.
 And as it is a fault to make it too deepe, so is it likewise a fault to make it too shallow. Too
 much depth narroweth the front, and giueth easie meanes to the enemy to incompasse, and
 ouer-front it. Too much shallownesse on the contrary side maketh it weake, and ready to
 be broken, and disordered by the enemy, and giueth a passage thorough, and meanes not
 onely to incompasse the front, but at the same instant also to assault it behind, and so utterly
 to defeat it. So that the reasons of Leo reach not home, as I said, there being other cau-
 ses of thickning a horse troupe besides reaching of launces to the front, and ioint thru-
 sting on of the horse comming behinde. And where Leo speaketh but of 4 horse in
 depth of a troupe, Polybius saith plainly that being ordered for fight, they had for the
 most part 8 in depth; Polybius a man which liued in the times, whereof Leo speaketh,
 and had bene General of the horse of the Achæans. Besides Leo seemeth not a little to
 differ from himselfe. For in his seventh Chapter, he writeth after this manner: If
 there be many horse (that is aboue twelue thousand) let the depth be of 10. If
 but few, let it be no more than 5. In squares therefore I hold Elians proportion best,
 to double the number of the front, to the number of the flanke; and as the number of the
 troupe ariseth (for horse troupes are not alwaies of one number) to enlarge the length of

A Rhomb

Cap. 19
A Rhombe neither filing nor Ranking

³ The halfe Rhombe is called a wedge being fashioned three square; so that the
forme thereof appeareth in the Rhombe.

Other haue formed the Rhombe so, that the 4 Horsemen embattailed in that
forme, nei-her file, nor ranke, conceiuing that turnings and other motions will be
more easily performed in this figure, nothing hindering before, behind, or in
flanke. And first they place the Leader; then one at his right, and an other at his
left hand, so distant, that their Horses heads reach vp to his Horses shoulders, as
is

Cap. 19.
A Rhomb Ranking but not Filing.

They that would haue a Rhomb Ranking for the Troop must be being the middlemost of an vneuen number, as of 11, or 13, or 15. To which they ioine other ranks before, and behind, euery one conteyning two lesse than the former; as if the greatest rank consist of 15, the next ranks on either side are to haue but 13, the next on either side of these 11. and so euery one two lesse, till at last you come to 1. And the whole Troop is to consist of 113 horse.

³ The halfe Rhombe is called a wedge being fashioned three square; so that the forme thereof appeareth in the Rhombe.

Other haue formed the Rhombe so, that the 4 Horsemen embattailed in that forme, nei:her file, nor rank, conceiuing that turnings and other motions will be more easily performed in this figure, nothing hindring before, behind, or in flanke. And first they place the Leader; then one at his right, and an other at his left hand, so distant, that their Horses heads reach vp to his Horses shoulders, as
is

most part 8 in depth; Polybius a man which liued in the times, whereof Leo speaketh, and had bene Generall of the horse of the Achæans. Besides Leo seemeth not a little to differ from himselfe. ^m For in his seventh Chapter, he writeth after this manner: If there be many horse (that is about twelue thousand) let the depth be of 10. If but few, let it be no more than 5. In squares therefore I hold Elians proportion best, to double the number of the front, to the number of the flanke; and as the number of the troupe ariseth (for horse troupes are not alwaies of one number) to enlarge the length of the

Leo cap 7.
581. & cap. 14.
570.

the front, and the depth of the flanke proportionably one to an other.

6 When there are as many horse in length as in depth } I noted before in the ninth Chapter, that there were two squares of equall sides, the one of number, the other of figure; which two squares differ in this, that the one maketh unequal sides in the shape of the battaile, the other equall. The first at this day, we call a square of men, the other a square of ground. When the number of the sides is equall in length, and depth, it giueth but halfe so much ground in front, as in flanke. Each souldier, if it be a foote battaile, occupying a foote, and a halfe of ground in front, when he goeth to charge, where in flanke he must haue 3 foote. And in a horse troupe 3 foote in front, and double, or (as some say) treble as much in flanke. And so are the sides unequal. The euen length of flanke and front giueth a like ground to both, and maketh the sides of the figure equall, but the number of the front double to the number of the flanke, whether it be in horse or foote. In foote, because the souldiers in Ranke haue but halfe so much distance, as they haue in file; In ranke a foote and a halfe, in file three foote. In horse, because the length of the horse is much more, than his breadth, and that length is fully stretched out in flanke, the breadth onely in front.

Why Rhombes were first brought into use, and the diuers formes of them.

CHAP. XIX.

THE forme of the Rhombe seemeth to haue beene taken vp for the necessarie vse thereof. For the Capitaine possessing the first place, the next following Horsemen are not to ranke with him, but to come a litle after on both sides; so that the heads of their Horses may reach to his horse shoulders, & on the right, & left hand, and behind, they ought to keepe good distances that too much thronging and clustering together, breed not disorder, whilest some horses being by nature fullen fall a flinging oftentimes, and foule with other; and considering the beast is somewhat long of body, that in turning about he wound not the horsemen, that are in fight, whilest with his heeles he ay meth at the Horses next vnto him.

They that fashion Horse into Rhombes, so fashion them, that some Rhombes file, and ranke; some neither file, nor ranke; other some file, but ranke not; other ranke, but file not: euery particular whereof standeth thus.

They that would haue 2 a Rhombe both file and ranke make the greatest ranke being the middlemost of an vneuen number, as of 11, or 13, or 15. To which they ioyn other rankes before, and behind, euery one conteyning two lesse than the former; as if the greatest ranke consist of 15, the next rankes on either side are to haue but 13, the next on either side of these 11. and so euery one two lesse, till at last you come to 1. And the whole Troupe is to consist of 113 horse.

3 The halfe Rhombe is called a wedge being fashioned three square; so that the forme thereof appeareth in the Rhombe.

Other haue formed the Rhombe so, that the 4 Horsemen embattailed in that forme, neither file, nor ranke, conceiuing that turnings and other motions will be more easily performed in this figure, nothing hindring before, behind, or in flanke. And first they place the Leader; then one at his right, and an other at his left hand, so distant, that their Horses heads reach vp to his Horses shoulders, as

is

most part 8 in depth; Polybius a man which liued in the times, whereof Leo speaketh, and had beene Generall of the horse of the Achæans. Besides Leo seemeth not a litle to differ from himselfe. For in his seventh Chapter, he writeth after this manner: If there be many horse (that is aboue twelue thousand) let the depth be of 10. If but few, let it be no more than 5. In squares therefore I hold Ælians proportion best, to double the number of the front, to the number of the flanke; and as the number of the troupe ariseth (for horse troupes are not alwaies of one number) to enlarge the length of the

Leo cap. 7.

531. & cap. 14.

570.

is said before. And the first row they make of an vneuen number (as 11). The Leader of the Troope standing in the middest, and 5 other being laid to him backwardly on either side; so that this *Rank* containeth two sides of the *Rhombe*. Then the *reare-Commander* is placed directly behind the Leader, and to him are other ioyned forwardly on either side, and the number of euery following ranke after the first, is to be two lesse than the former, and therefore 4 must be added on either side to the *reare-Commander*, and the number of the second ranke be 9. This ranke maketh two sides *Parallel* to the two former sides of the *Rhombe*. The third must be 7, and so forward to one. The whole Troope hath in it 36 Horse. Polybius expresseth the forme by the Greeke letter Δ . and maketh it to consist of 64 men.

Other *Rhombe*s there are which *file*, but *ranke* not, and are fashioned thus: They make a file of any number, the Captaine of the Troope being *File-leader*, and the *Reare-Commander* the last of the file. To both the *flanks* of this file, they lay two other files, either of them one lesse in number, than the first. These they begin to place, euen with the middest of the distances of the first file on both sides, as if there were 10 in the first file, the next files on either side should haue 9 a peece, and the next after them 8 a peece, and still one lesse in all the rest aftercomming files, and so it will fall out, that the Horsemen shall *file*, but not *ranke*. This forme is profitable for turning of faces, when need is, from one point of the *Rhombe* to another. Turning to the right hand is called turning to the *staffe*. Turning to the left hand is called turning to the *Raines*. But if a Troope be *to ranke*, and not to *file*, it must be ordered thus: The middle and greatest *ranke* is to be made of an vneuen number, and the rest of the *rankes* on both sides, laid euen with the distances of this *ranke*, as was done in the *filings* troope. So shall you haue a Troope that *ranketh*, but *fileth* not.

Notes.

THE former Chapter had a generall diuision of Horse battailes into Rhombes, wedges, and squares; this comprehendeth the sundry figures of Rhombes, and the manner of framing them. Rhombes therefore are of 4 Kindes, some *filings*, and *ranking*; some *filings*, not *ranking*; some *ranking*, not *filings*; some neither *filings*, nor *ranking*.

1 The heads of the horses reach to the heades of his shoulders] *Ælian* saith, that in a *Rhombe* the Captaine standeth first, and the heads of the next horse reach to his horse shoulders. This rule, if it be taken generally, and meant of all Rhombes, will deceiue vs; if for two kinde of Rhombs alone, there is nothing more true. The *Rhombe* neither *filings*, nor *ranking*; and the *Rhombe* *filings*, not *ranking*, haue the followers horses heads advanced to the shoulders of them, that stand before. But the *Rhombe* *filings* and *ranking*, and the other *ranking* not *filings*, come wholly behind the horse of the Captaine, as the figure shewes, and will appeare in the verball description of the *Rhombe*.

2 A *Rhombe* both to *file* and *ranke*] To make a *Rhombe* both *file* and *ranke*, choicemust first be had of an vneuen number for the ranke the middest of the Troope, where the manner is to begin the *Rhombe*; which number must neither be too great, lest the Troope grow also too great, nor too little, lest there be in it no strength. *Ælian* giues a 11, 13, or 15 for that ranke, and willett vs to begin the frame by placing first the middle ranke, to which the other *rankes* are to be ioyned on both sides, the middle men

against the middle man of the first ranke in a right line of file, and the rest in like sort, euery *Ranke* still decreasing 2 men, till at last in the front, and reare-angle you come to one. The figure of this kinde of *Rhombe* I haue placed in the precedent Chapter; wherein the middle ranke is of 11, and the whole troupe of 61, and the horse heads of those that follow reach not to the former horses shoulders.

3 The halfe *Rhombe* is called a wedge] I haue spoken of wedges before, but nothing of the framing of them. *Ælian* here sheweth how they are framed, when he saith, that the forme of them appeareth in the *Rhombe*, and that the halfe *Rhombe* is a wedge. For as in a *Rhombe* *filings*, and *ranking*, you begin with placing the middle ranke first, and so proceed adding on both sides ranke to ranke, till you come to one man in the front: So must you proceede in a wedge, sauing that to the first, and greatest ranke you ioine the rest onely on the one side, abating still in euery ranke 2 men, till you come to the point of the front, where the Captaine standeth alone. And this was the ordinarie horse troupe amongst the Macedonians, and is described in the next Chapter.

4 That the horsemen neither *file* nor *ranke*] The second kinde of *Rhombe* specified here by *Ælian* is directly opposite to the first. The first both *filed*, and *ranked*, this neither *fileth*, nor *ranketh*; and is that kinde, which I noted in the last Chapter, to haue more curiositie, than use. For the rest, what is more easie to frame, than they? In which either files, or *rankes* are laid together; or files alone, or *rankes* alone. And out of that ioyning both in the inward parts of the *Rhombe*, and the outward (that is the *flanks*) arise, and are without difficulty figured. In this you must first begin with the out sides, and make two front lines, or sides of the *Rhombe*; and after adde as many to the Reare. And then when the 4 sides are framed, and haue their place, patch up by peece-meale therest of the body within. Wherein if there be not very large distances left betwixt horse, and horse, especially euery one being laid head to shoulder to an other, it is not possible to convey so many horses within the foure sides, as will make up the full *Rhombe*. And yet make it up as you will, the trouble is more, than in the rest of the *Rhombe*s. And for the use, I see not how it can be greater, than in the rest, whatsoeuer is alledged for turnings, and other motions. And the more I thinke upon it, the more I am induc'd to thinke, that it was the invention of some *Tacticke* master (of whom were great plenty amongst the Græcians) who seeing that some *Rhombe*s *filed*, and *ranked* not; other *ranked*, but *filed* not; other both *ranked*, and *filed*, and that the two first were opposite the one against the other, would needs bring in a fourth, neither *filings*, nor *ranking*, to make an opposition likewise against the third. But because this kinde also is specified by *Ælian*, let vs see how it is to be framed. *Ælian* for examples sake would haue the Troope to consist of 36 horse. To put these 36 horse in a forme, that shall neither *file* nor *ranke*, we are thus to worke. First, we must begin with the two front sides of the *Rhombe*, and make them of 11 horse, placing them thus: The Leader and Captaine in the point; next him backwardly on each side a horseman, his horse head reaching to the shoulders of the Captaines horse; then on the outward side of each of these a Horseman, and their horses heads must likewise reach to the shoulders of the next horses before. So must you goe on, till you haue in like manner bestowed 2 a peece more on each side, still opening the two sides of the *Rhombe* proportionally. Thus done you haue  Then are we to fashion the two Reare sides of the two sides of the *Rhombe* which  Rhombe of 9 horse, placing them after this will be in this forme.  manner: The Lieutenant in the Reare angle directly opposite to,  yet looking toward the Captaine; on either side of him forward toward the front 2 Horsemen, their horses shoulders lying euen with the head of the Lieutenants horse. And after them the other 6; 3 on one side, and 3 on the other in the same proportion. And so haue we the other two sides of the *Rhombe* in this forme.  which being ioyned

The Tactics

ioyned to the former make the 4 sides of the Rhombe; In the framing whereof 20 of the 36 horse are bestowed. There remaine 16, which are thus to be ordered: Within the Rhombe we must at reasonable distance place a horseman behind the Captaine in a right line, and in the manner as before lay 3 to him on each side. The number will amount to 7, and this is the figure. Then another horseman is to be set at the same distance directly before the Lieutenant, and on each side of him two other toward the front, And these 12 horse ioyned together, will fashion out a lesser Rhombe, comprehended within the sides of the first. So are 32 horse disposed of. The 4 that are left are thus to be ordered. in a right line againe after the Captaine, and at the former distance is another horseman to be set: Then 2, one of the one side, & the other of the other side of him, their horses heads reaching to his horses shoulders thus The horseman left must supply the void place, standing directly before him, that stood next before the Lieutenant. And this is the true description of the Troope neither filing, nor ranking. I haue bene the longer in describing it, because the figure grauen is not fully to my minde, no horse head reaching to the shoulders of the horse, that standeth before him.

5 Polybius maketh it to consist of 64 men] Aelian took the number of 36 horse to frame this Rhombe, Polybius requireth 64. The number is not materiall, so the forme be observed. If you make it of 64, you are to take 15 horse for the 2 front sides, and 13 for the 2 reare sides, and so in euery ranke within to diminish 2, as you did in the former.

6 Which file, but ranke not] The third kinde of Rhombe fileth, but ranketh not. It is easie to frame. Take what number of horse you please, and make a file; then lay to the distances betwixt horse, and horse of that file on each flanke two other files, each file containing one lesse in number than the first. And the heads of the files are to be laid right against the space which is betwixt the Captaine, and his follower, and the rest of the horses against the other spaces successiuelly. In all the paires of files, that follow, and are laid to the flanks, you must still diminish a horse a peece, till you come to the points, which haue but one either of them. And of this abatement of one in euery file, both front, and reare, and flanks grow into points, and make a Rhombe: As of the even number in euery file, a square battaile would arise. See the figure. This was the forme the Theffalians fought in, as appeareth by Aelian.

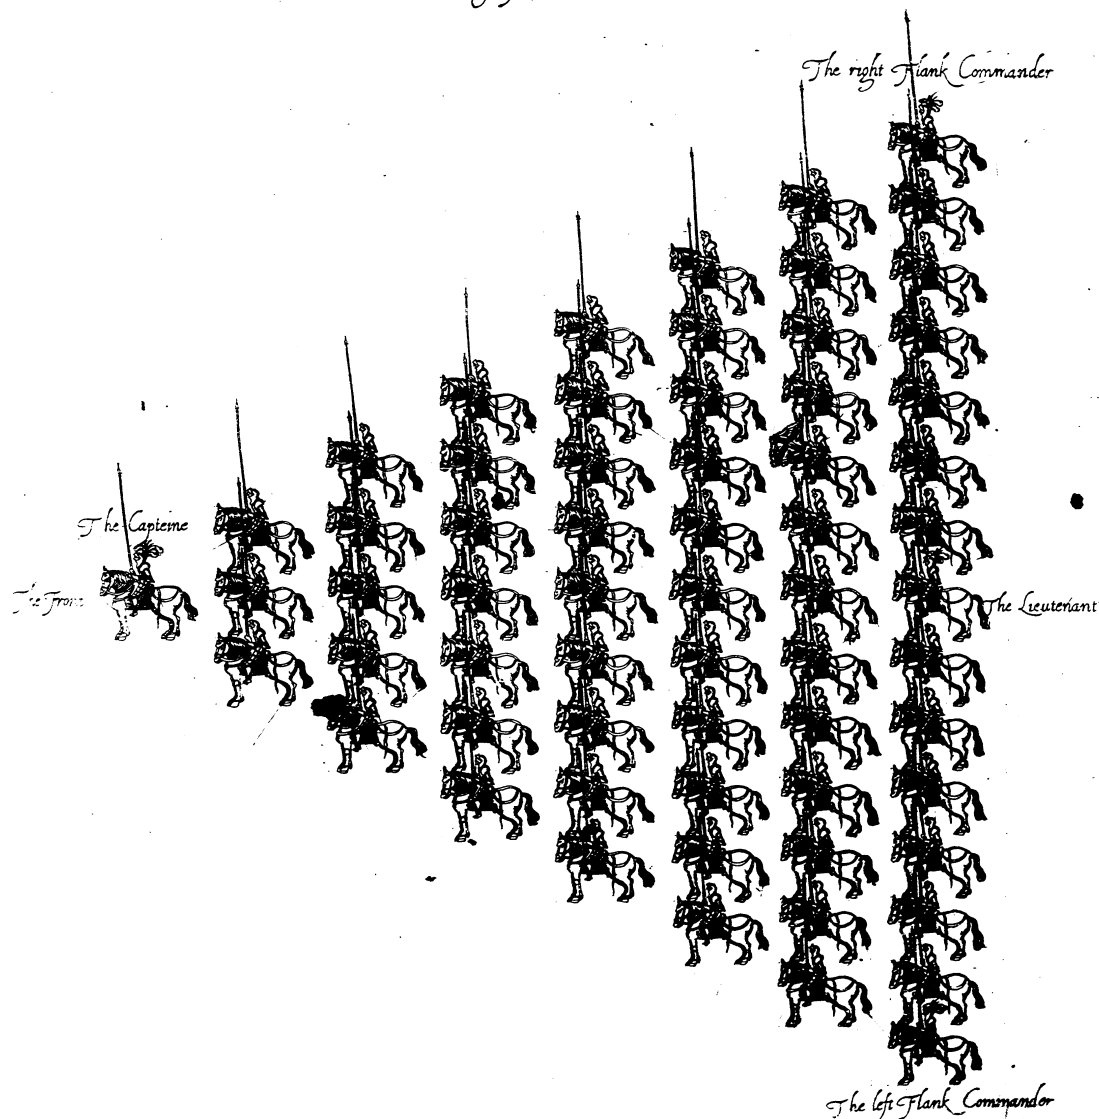

7 Turning to the right hand] The turnings of horsemen and footmen to the right, and left hand, are not termed by the same names. And the difference cometh of the diuersitie of weapons caried on the right, or left side. The horseman in his right hand held his staffe, in the left the raines of his bridle. The armed-foote in his right hand his pike, on the left shoulder his Target. Hence was it, that when the horseman was commanded "to turne to the right hand, they bid him turne to his staffe; the footeman to his pike. When to the left hand, they bid the horseman turne to the Raines, the footman to the Target.

8 To ranke, and not to file] This is the last kinde of Rhombe, and it ranketh, but fileth not. It is made by a contrary way to the former. The filing Rhombe began at the front point, & reare-point, & proceeded to the flanks. This beginneth at the flanke points, & proceedeth to the front and reare. First therefore a ranke is to be laid of what number you list. Aelian would haue it of an vneuen number; but it will fall out as well in an even number, as the figure sheweth. To the distances of this ranke you must lay 2 ranks more, one on either side, whose number must be one lesse a peece, than the former ranke. Thus continue laying ranks still toward the front, and reare, and in euery paire of ranks diminish one a peece, till you come to the points, either of which haue but one, namely the Captaine, & the Lieutenant, and the Rhombe will ranke, and not file.

CHAP. XX.

Cap. 20

The ordinary horse troupe
consisting of 64

The place of Horsemen in the field, the number of an usuall horse troupe, the degrees, and names of the officers of the Horse in generall.

CHAP. XX.

THE Troopes of Horse, as the light-armed, are placed sometime before the *Phalange*, sometime on the right, or left hand in *flanke* of the *Phalange*, sometime behind the light-armed in the *Rear*. For our purpose, let them be placed in the *Rear*, and let the first Troope be of 64 men, and the first ranke thereof 15 Horse. The next 13. The next 11; and in all the rest abate 2, till you come to the last, which is one.

² He shall carry the *Cornet*, that standeth in the second ranke next the *Ranke-Commander* on the left hand. All the Troopes shall be 64 in number. The horsemen in all 4096. ³ Two Troopes are called an *Epilarchy* of 128 horse. Two *Epilarchies* ⁴ a *Tarentinarchy* of 256 horse. Two *Tarentinarchies* ⁵ an *Hipparchy* of 512. Two *Hipparchies* ⁶ an *Ephipparchy* of 1024 horse. Two *Ephipparchies* ⁷ a *Telos* of 2048 horse. Two *Telos* make ⁸ an *Epitagma* of 4096 horse.

Notes.

Hilberts of Squares and Rhombes, usuall horse battailes amongst the *Græcians*. Now followeth the horse battaile of the *Macedonians*, of which *Ælian* hath thus afterward: This forme of horse battaile is called a *wedge* by *Tacticks*, and it was invented by *Philip King of Macedonia*, who placed his best men before, that by them the weaker might be held in, and inabled to the charge. As in a *speare*, or *sword*, the point whereof, by reason of sharpnes quickly piercing maketh way for, and letteth in the middle blunt yron. I haue spoken somewhat of the *wedge* in the two last Chapters. *Ælian* in this Chapter sheweth the number, and manner of framing it, and how many troupes ought to attend the *Phalange*, and vnder what officers, and degrees.

¹ Let the first troupe be of 64 men] The number of the *wedge* ought to be 64 horse. You make it beginning (as the *Rhombe* that ranked, but filed not) with a ranke of 15 horse. Then must you proceed toward the front, with an other ranke of 13, the middle man filing with the middle man of the first ranke, and the rest with the rest. And so you are to continue abating still two in every following ranke, till at last you come to one, who is the *Commander of the Troupe*, and standeth in the point of the front.

² He shall carry the *Cornet*] The place of the *Cornet* is not right set downe in the figure. He there standeth on the right hand of the middle man of the second ranke, whereas he should stand on the left. And you must not account the second ranke to be the ranke next to the *Commander* in the front; but as *Ælian* doth, that was secondly placed after the first consisting of 15, which was in the *Rear*. So that the *Cornet* is to stand in the next ranke to the *Rear*.

But here is nothing said concerning the distances, that ought to be betwixt horse, and horse. Of the distances betwixt foote, and foote he hath spoken in the 11 Chap: But of the distances betwixt horse, I finde nothing, but generall words. That which wanteth in *Ælian*, I will supply out of other Authors. We must vnderstand then, that two kinde of distances were obserued amongst horsemen; one for marching, an other for fight.

n Polyb lib. 12.
663. A.

o Leo cap. 17.
§ 29.

In marching there ought to be 6 foote betwixt horse and horse. *Ælian* hath before given this distance to the foote. And that horse held it likewise appeareth by *Polybius*. Who reprehending *Callisthenes* for carelesnesse in describing the battaile betwixt *Alexander* and *Darius* at *Issos*, specially taxeth this: That he placed thirty thousand horse, and thirty thousand men, in foureteene furlongs of length. whereas the place was not capable of halfe the horse. His words haue this sense; The order of horse, when they are prepared for fight, is for the most part 8 in depth. And there is a distance to be left in front betwixt euery troupe, to giue liberty to wheele and double-wheele. So that one furlong will containe 800 horse; and 10 furlongs 8000; 4 furlongs 3200: And eleuen thousand, and two hundred Horse will fill the space of 14 furlongs in length. The words seeme at first somewhat obscure, being well weighed they will be cleare enough. *Polybius* saith, that these 800 horse were ordered 8 in depth, and that they took up a furlong of ground in length. There must be therefore of them a hundred files. For a hundred files of 8 horse a peece, will arise to 800 horse. Compare then these 100 files, (the length of the battaile) to the length of a furlong. And seeing a furlong containeth 400 Cubits, or six hundred foote, euery file shall haue 4 cubits, or 6 foote space betwixt them. And so the distance betwixt file and file in a march will be 4 Cubits, or 6 foote. The other distance of three foote appeareth in *Leo*, whose words stand thus: Put the case, that the battaile is of 600 horse in length, and 300 in depth, seeing that euery horse in length of the battaile possesseth three foote in breadth, the number of feete will amount to 1800; And seeing againe that euery horse in depth possesseth 8 foote, there will arise hereof 4000 feete; so that in the foure-sided figure, out of the length of 1800, and the depth of 4000 feete arise 720 *Myriades* of square feete. And the Perimeter alone of the outward foure sides containeth 11600 feete. And because 6 feete make a fathome, and a 100 fathoms make a furlong, and 7 furlongs, and a halfe, make a mile, the whole Perimeter of 11600 feete will come to two mile, and a halfe, and neare a 10th part. In this distance therefore according to the closest order, or shutting, the thirty thousand horse are contained. But if they stand not so close, you must alter your account according to the thinnesse, and out of the greatnesse of place coniecture of the multitude of the people. So *Leo*. Which place albeit it seeme to require a large interpretation, because many things worth the noting offer themselves in it; yet for this time I will onely insist upon that, which I first propounded, that is the distance of three foote betwixt horse, and horse, when they goe to charge (for that is the meaning of *Leo*, when he speaketh of the closest order) which distance is expressly here set downe. And the matter will yet seeme more cleare, if we adde the words of *Leo* in the Paragraph next, but one, to this, which are these: The oldest Tacticks in ordering of foote Battailles giue euery man at the first distance foure Cubits; when the battaile is closed two Cubits; when ferred and shut one Cubit. Out of which proportion a Scout may exactly discover by the quantitie of the place the number, not onely of horse, but of foote also. These oldest Tacticks that *Leo* mentioneth agree with *Ælian*, as wee haue seene. But where the foote haue three distances, the horse are to haue but two. The open order of six foote they ought to haue, and likewise that of three foote; neuerer they cannot come together, because of the breadth of their horse, and because they are to haue roome sufficient for the weilding of their weapons.

All the Troupes are to be in number 64. A Troupe consists of 64 men, and 10 the Phalange belong 64 Troupes, as the Phalange containeth 64 Ensignes, or Symagmas

agma's of armed foote. To which Ensignes the 64 Troupes of horse are proportioned. Their place is according to *Ælian* after the light-armed; not one troupe after, or behind an other, but one beside an other, in one front; and that front in a right line, which stretch out, as long as the Phalange of armed it selfe. Now the files of the armed being 1024 in number, and the number of the horse in the last ranke (which containeth the length of the Horse-battaile, and should answer the number of files) but 960, we must seeke out a proportion to make the length of both equall one to another. The difference then betwixt them in length is 64 men, which in order take up 192 foote. And where there goe foure Phalangarchies to a fourefold Phalange, and 16 troupes of horse are placed behind euery Phalangarchie, we must diuide these 192 foote into foure parts; euery of which parts will amount to 48 foote, and giue to each troupe three foote distance one betwixt an other (for distances betwixt one troupe, and an other, *Polybius* holdeth necessary) and so shall the 16 troupes of horse take up as much ground in length as a Phalangarchie. The one containing 256 files in length which occupy 768 foote of ground; and the other 240 men in the last ranke, which occupy 720 foote. To which adding 48 foote of distance, there ariseth the euen number of 768. And so shall the 64 troupes of horse be euen in length with the fourefold Phalange.

The names of the Offices, and Commands of the Horse follow, wherein as I before noted in the foote, we must not presse too neare the property of words, but take them, as they haue bene used among Souldiers.

3 Two troupes are called an Epilarchie. One troupe is called Ile, and the Commander an Ilarchi; for so he is termed before in *Ælian*. Two troupes an Epilarchie, and the Commander an Epilarch, as it were a Commander over two Iles, troupes. He hath 128 Horse vnder his command.

4 A Tarentinarchie. Of Tarentines mention is made in the second Chapter. The name of a Tarentinarchie is not giuen to this Troupe, because it consisted of Tarentines, but because of likelihood the Tarentine horsemen had so many in a troupe, *Leo* is he, as it will, it signifieth here a troupe of 256 Horse.

5 An Hipparchie. Properly signifieth the command of horse, and *Xenophon* useth the word Hipparch for the Generall of horse; but *Ælian*, and the Tacticks use it for the command of 512 horse.

6 An Ephipparchie. As it were a command over two Hipparchies, or over 1024 horse.

7 A Telos. The name of Telos is giuen both to a body of horse, and to a body of foote. A Merarchie was called by some Telos (saith *Ælian* before) and contained 2048 armed. The Telos of horse containeth 2048 horse. So the bodies are equall in number. The word sometimes signifieth a Command, or Dignitie, from which signification this body, as seemeth, hath the name.

8 Epitagma. The whole body of light-armed was called an Epitagma, which name is giuen likewise to the whole body of horse comprizing 4096 horse. It may be they are both so called, because they are placed behind the Armed, as I noted before. For that place *Ælian* assigneth vnto them.

The diligence to be used in choice, and exercise of the best formes of Battailles.

CHAP. XXI.

THese Inventions and conceits of those, that lived in old time, about *Troopes of Horse* are declared, in what forme every one was cast, and for what cause some used one forme, some another. Now it behoueth (as in things that carry with them great difference) not carelessly, and negligently, to rely vpon the bare precepts; but rather by daily exercise to make tryall of euery kinde of figure, and so attayning to the perfect knowledge of that, which is readiest, and of most advantage, to admit and receiue it in true fight. For it were great simplicitie, considering in matters of lesse importance men by curious inquiry reach to the exact finding out of many things, herein not to ground vpon perfect and sure experience, before we come to ioyne with the enemy.

Troopes may be enlarged or lessened, as it shall seeme convenient to him, that hath the command.

Of Chariots; the names, and degrees of the Commanders.

CHAP. XXII.

AS for ordering *Chariots* and *Elephants*, albeit they are worne out of vse, yet to make vp the measure of this discourse, I will remember their names, as they are set downe in ancient writers. In the Art of ordering *Chariots* for the field, they call two *Chariots* a *Zygarchy*; Two *Zygarchies* a *Zyzygi*; Two *Zyzygies* an *Epizyzygi*; Two *Epizyzygies* an *Hartamarchy*; Two *Hartamarchies* a *wing*; Two *wings* a *Phalange*.

A man may vse many and sundry *Phalanges* of *Chariots*, and yet retain the same names in euery *Phalange*. Some haue framed simple *Chariots* to serue without; other some haue armed them with *sashes* prominent and standing out on each side.

Notes.

There were two kinde of *Chariots* used of ancient time, the one a simple *Chariot*, the other a *Chariot* armed with *sashes*. The first kinde was used by the *Heroes* (as they terme them, that is the renowned *Souldiers* of old, such as were *Achilles*, *Hector*, *Cynus*, *Eneas*, *Turnus*) as appeareth by *Homer*, *Virgil*, *Ovid*, and other *Poets*. The last was brought in by the *Generalls* of later times, especially by those that reigned in *Asia*, and in *Africa*. For the *Europeans* haue counted them fruitlesse, and vaine mockeries, and amongst them you shall hardly finde any mention of *Chariots*. *Ælian* toucheth them onely, because both they, and *Elephants* were in his time growne out of vse. Wherefore I meane likewise to passe them ouer sleightly, onely directing the Reader, that is desirous to vnderstand their manner of fight to places of *Historie*, where they are mentioned. And first see for their

Forme.

Forme. *Xenoph. Cyrop. lib. 6. 152. D. E. & 156. B. C. de exped. Cyr. lib. 1. 264. A. B. Liu. decad. 4. lib. 7. 142. A. Diodor. Sicul. lib. 17. 596. Quint. Curt. lib. 4. 119 & lib. 8. 371.*

Their violence, *Diod. Sicul. lib. 17. 593.*

Their place in the battaille, *Xenoph. Cyrop. lib. 6. 168. C. D. Liu. decad. 4. lib. 7. 142. A. Diod. Sicul. lib. 14. 408.*

Remedies against them, *Diodor. Sicul. lib. 17. 592. 593. Xenoph. de exped. Cyr. lib. 1. 265. Liu. decad. 4. 142. Quint. Curt. lib. 4. 141. Plutarch. in Sylla.*

I come to the names of the Commands of Chariots.

1 A *Zygarchie*] *The command of two Chariots; as it were a yoke of Chariots.*

2 A *Syzygi*] *The command ouer two yokes, as it were, of Chariots ioynd together; that is ouer 4 Chariots.*

3 An *Episyzygi*] *The command ouer foure yokes of Chariots, that is ouer eight Chariots.*

4 An *Harmatarchie*] *Properly the command of Chariots. But used by Ælian for the command of 16 Chariots.*

5 A *wing*] *As foote, 10 Chariots, and Elephants, had their wings of battaille. To the wing went 32 Chariots. Yet finde I this order of imbattailing Chariots nowhere, but in Ælian. He that will, let him read the places, that I haue noted before, for the ordering of Chariots. Notwithstanding I can not doubt, that the names given here by Ælian, are taken out of ancient writers.*

6 A *Phalange*] *It consisteth of 64 Chariots; and wee here see, that Chariots also had their Phalanges, as well as foote, and Horse.*

Of Elephants; the names, and degrees of their Commanders.

CHAP. XXIII.

Touching *Elephants*, he that is Commander of one *Elephant* is called *Zoarcha*; Of two *Therarcha*, and the body a *Therarchy*; Of foure *Epitherarcha*, and the body an *Epitherarchy*; Of eight *Ilarcha*, and the body an *Ilarchy*; Of 16 *Elephantarcha*, and the body an *Elephantarchy*; Of 32 *Kerarcha*, and the body a *Kerarchy*. That which consisteth of 64 wee call a *Phalange* of *Elephants*; as if a man should name the Commander of both the wings *Phalangarcha*.

Notes.

The vse of *Elephants* was greater amongst the people of *Asia* and *Africa*. Those of *Europe* esteemed them not much. And yet we finde, that they were brought into the field by the *Romans* also; who first saw *Elephants* in *Italy* in the warres, they had against King *Pyrrhus*. The *Indian Elephant* was preferred before the *African* for greatnesse of body, strength, and courage. Many things are written concerning the seruice of *Elephants*. But because *Ælian* toucheth no more, then the names of the bodies, and the degrees of Commanders, I will only note such things, as I finde concerning them in *Histories*. Their kinde of armor, and furniture I haue taken out of *Liuy*, and expressed them as wee see, as I could, in figure.

I have noted before the impropriety of names given to military bodies as well in the armed and the light armed foot, as in horse troupes, and in Chariots. That defect is no less in Elephants. The Commanders and commands of them having names, which were at first large, and improper enough, but after ward made good by use, and received by the Tacticks as significant to expresse the things, for which they were invented. The first is given to him that is to command one Elephant. Who is called

1. Zoarchos] The Commander of a living creature, that is of one Elephant. The next is

2. Therarchos] A Commander of Beasts: which name is appropriated to him, that commandeth two Elephants, and the body it selfe is named a Therarchie.

3. An Epitherarcha] Having the authoritie over the Therarchie and the body is called an Epitherarchie comprizing foure Elephants.

4. An Ilarch] As it were the Commander of a troupe, and the body is called an Ilarchie. It is commonly applied to horse, and signifieth a horse troupe, and Ilarcha the Captaine. But here Ilarcha signifieth the Commander of 8 Elephants.

5. An Elephantarch] A Commander of Elephants; as though the other bodies before mentioned were not of Elephants. Such straights are men often times driven unto in devising new names for new things, which notwithstanding passe after ward and growe familiar by use. Elephantarcha commandeth 16 Elephants, and the command is called an Elephantarchie.

6. A Keratarch] The Commander of a wing, the body a Keratarchie, having in it 32 Elephants. A wing of Chariots had as many.

7. A Phalange] This is the greatest body and consisteth of 64 Elephants. But as Chariots may be ordered into many Phalanges, and yet the same names retained in every one of the Phalanges, so it is in Elephants. For that armies have had in them at once a-

c Polyb. lib. 1. 39. B. d Diod. Sicul. lib. 17. c Polyb. lib. 5. 421. f Plutarch. in Alexand. boue 64 Elephants appeareth by Histories. Polybius, and Diodor Sicul. testifie, "the first that the Carthaginians," the last that King Porus against Alexander had the one 140, the other 130 Elephants in their armies. "The same Polybius saith that Ptolomey had against Antiochus 73 Elephants in his armie, and Antiochus 102. And "Plutarch reporteth that Androcottus, King of a part of India, gaue to Seleucus at one time 500 Elephants

The names of military motions expresse
in this booke.

CHAP. XXIV.

THus have we set downe in particular the kindes of perfect Forces together with the severall names of euery body; Which being premised, it seemeth fit

Cap. 25

Cap. of one Turning of Faces to the
right hand

The first standing

The Front

fit to deliuer the words of exercise, that when the Commander, shall will any thing to be done, the Souldier in daily experience acquainted before with the signification of euery of them, and with the mouing in each figure may easily performe and execute, whatsoeuer is commanded.

There is a motion called *Clisis* whereof one kinde is to the Pike, the other to the Target; Another is called *Metabole*; another *Epistrophe*; another *Anastrophe*; another *Perispasmus*; another *Eperispasmus*; besides we say to *file*; to *ranke*; to returne to the first posture; to *countermarch*; to *double*. Likewise we vse the words *Induction*; and *Deduction* to the right, or left hand; a *broad Phalange*; a *deepe-phalange*; and *menen-fronted Phalange*; and *Parembolē*; and *Protaxis*; and *Entaxis*, and *Hypotaxis*; and *Epitaxis* and *Prostaxis*. The signification of which words I will shortly deliuer. And yet I am not ignorant, that the precepts of warre are not by all *Tacticks* expressed in the same tearmes.

Notes.

Ælian in the Chapters precedent, hath numbred vp all kindes of forces, as well foote, as Horse, and Chariots, and Elephants, that in ancient time were accounted necessarie for warre. And hath giuen them their armor, and furniture, and distinguished them into militarie bodies, and imbattailed them, and taught the distances, that they ought to hold in fight. It followeth now that he speake of motions military; which are the life of an armie, and onely giue meanes of victorie; and without which all preparation of forces is vaine, and availeth nothing in the field, nor to the end, for which they were leuied. This Chapter then containeth the names of those motions; the following Chapters the particular explication of them. To which we will note, what we finde in ancient writers. For the signification of the words, I referre them to the seuerall Chapters, where they are expounded.

Of turning, and double turning the Souldiers faces,
as they stand embattailed.

CHAP. XXV.

¹ *Clisis* or turning of the face, is the particular motion of euery Souldier declining his face either to his Pike, that is to the right hand, or to his Target, that is to the left hand. The vse of it is, when the enemy sheweth himselfe in *flanke*; to encompassse our winges, or else to charge vs: or for some other cause, whereof I will speake in conuenient place. ² Two turnings of the face towards the same side transferre the sight of the Souldier to the *reare* of the battaile. And this kinde of motion is called *Metabole*: being also vsed either to the *Pike*, or to the *Target*. In the first standing the mouing of the Souldiers face toward the Pike is called *Clisis*, the second mouing the same way *Metabole*. For *Metabole* is the conuersion of euery mans face particularly to the place, which was behinde his backe. And the same that *Metabole* is in ech seuerall Souldier, the same is *Perispasmos*, or wheeling about in the whole battaile. There are ³ two kinds of *Metabole*, the one from the enemy, the other to the enemy. *Metabole* is defined to be a changing of euery mans face in particular from the front to the

reare;

reare; or contrariwise. Turning about from the enemy is, when the Souldier turneth his face twice towards the Pike; To the enemy, when hee turneth twice towards the Target.

Notes.

Foure kinde of Motions are set downe by Ælian whereby upon any occasion the battaile may be somewhat changed: Turning of faces, countermarch, wheeling, and doubling, whereof the first may be used, in what order soever your battaile standeth, the second onely in open order, the third in close order only, the fourth either in close, or open order. Clifis, or turning of faces, whereof this Chapter intreateth, albeit it may be brought in also in open Order; yet is it not don for the most part but in close order; and then especially, when none of the other motions haue place. The Græcians alwaies comented to bring their file Leaders, that is their best men, to fight. In open Order they chose to countermarch; In close Order, hauing place, to wheele their battaile about, and so turne the face of it against the enemy. If they could doe neither of these, they came to the last remedy, which was turning of faces of euery particular man in the battaile.

1 Clifis, or turning of faces] This motion is of lesse paines then any other, but of no lesse importance, or necessitie. In the rest the Phalange changeth the place, or the forme: In this it holdeth both, and yet is ready for any attempt of the enemy. Onely euery Souldier in particular turneth his countenance to the right or left hand, as he is commanded. To turne his face to the Pike is to turne to the right hand, because that hand bore the pike, to turne to the Target is to turne to the left hand; because the Macedonians caried their targets on their left shoulder. For the use of this turning of Faces, Ælian saith, It hath place when the enemy sheweth himselfe in flanke

2 To incompasse, our wings] Clifis is no more, then bearing faces to the right, or left hand, that is to our wings. When then we finde our enemies, to incompasse our right wing, wee turne our faces, and weapons that way to receiue him: to the left, when he cometh to charge vs on that side. If on both sides, then turne wee the faces of our Phalange halfe to the right, halfe to the left hand; which is the Antistomus Phalange whereof Ælian speaketh hereafter. Briefely, there is almost none of the marching Phalanges which are afterward discribed, but it hath neede of this motion. Besides if upon any occasion the Phalange be to moue from any of the flanks, you are only to command Turning of faces to that flanke, and then to lead on. I will giue an example, or two. ^a Alexander at Arbela hauing imbattailed his armie to fight with Darius, had intelligence, that Darius had throwed the ground betwixt the two armies with Calthrops. He commanded therefore the right wing, which himselfe led, to turne faces to the right hand, and follow him, to the end to go round about, and auoide the places, that were sowed with Calthrops. Darius marching against him to the left hand, disioyned his troupes of horse, and Alexander taking the aduantage, and giuing in quickly betwixt the spaces, put Darius to flight. If Alexander had marched on with the right front, he had fallen upon the Calthrops. To auoide them, he used the benefit of this motion, and turning faces to the right hand he led on, untill hee had passed the danger, and then turning againe to the first posture, went to charge, and defeated the enemy. An other example is in ^b Polybius, who describing the battaile betwixt Machanidas the Lacedæmonian Tyrant, and Philopœmen the Achæan Generall, telleth, that Machanidas hauing in the left wing put the Achæan mercenaries to flight, followed hard the chase. Philopœmen as long, as there was hope, inducured by all meanes to stay his men: when he saw them vtterly defeated, hee hastened to the right

^a Polyen. lib. 4.
in Alexand.
§ 17.

^b Polyb lib 11.
§ 34.

right wing, and perceiuing the enemy busie in chase, and the place voide, where the fight had beene, commanding the first *Merarches* to turne their faces to the right hand, heeled them on with high speede, not yet breaking the order of their imbattailing. And quickly leaping vpon the forsaken ground, hee both cut betwixt them, that gaue chase, and home, and withall got the aduantage of the vpper ground against the left wing of the armed. Whereby hee obtained the victory. If Philopœmen had in this action used wheeling of his battaile, which onely was the other motion, which would haue serued his turne, besides the troublesomenesse of the winding about, he should haue beene forced to haue used two wheelings, and so failed of the celerity, which was at that time requisite. Faces were turned in a trice, and he made himselfe Master of the ground, hee desired, before hee could haue wheeled once his battaile.

3 Two turnings of the Souldiers face] Clifis, or turning faces to the right, or left hand, consisteth of one turning and moueth no further, then the side. If the motion be to the reare, it hath two turnings, and is called Metabole, which is defined to bee a changing of euery mans face in particular from the front to the reare, or contrariwise. And as wheeling of the whole body carrieth about the fronts of the battaile to the reare; So doth Metabole turne the face of euery particular Souldier, and maketh him looke from the front to the reare. The word properly signifieth a change, which happeneth herein, when the Souldiers are changed from the front to the reare, or contrariwise. The use of Metabole is principally to resist the enemy that giues on upon the reare. ^a So Pyrrhus being entred the Citie Argos with a few, and overpressed with multitude, retired by little and little, and defended himselfe, often turning his and his Souldiers faces against the enemy. ^b So the armie of Cyrus the elder retiring from the walles of Babylon, often turned about their faces to the left hand, and waited their enemy, who were reported to be on foote, and ready to come and charge them. And if the enemy assault both the front, and reare, it hath beene the manner to continue halfe the Souldiers in each file with their faces to the front, and command the other halfe to turne their faces to the reare against the enemy behind. And this forme is called Phalanx Amphistomos discribed by Ælian cap. 38. And sometimes it is used to speed our march, and preuent the enemy, as was said before of Clifis. ^c Agefilaus made an incursion into the Territory of the Thebans, and finding a Trench, and Ramper cast vp by the Thebans for defence of their Countrey, and onely two narrow waies betwixt, he cast his armie into a hollow *Plinthium*, or square, and led it against the left hand passage, whither all the Thebans flocked for defence. But hee turning about faces from the reare, hastened away, and gained the other passage, where no man was present to resist, and entering spoiled the Countrey; and returned without impeachment.

4 There are two kinde of Metaboles] Before were rehearsed two kinde of turnings of faces about, one to the pike, the other to the target, here is added two more, one from the enemy and the other against the enemy; which are all one indeed, and differ onely in name. What the true meaning of these turnings should be, I am in doubt. Ælian expounding them one way, Suidas another. Ælian esteemes them by the right, and left hand, Suidas, albeit he haue that signification also, esteemes them by the front and reare. Therefore Suidas defines the turning from the enemy to bee a turning about, toward the reare: that against the enemy, a turning about toward the front. Ælian would haue the first to containe two turnings toward the right hand, the second two turnings toward the left. I for my part assent rather to Ælian. For touching the turnings of Suidas, I cannot yet vnderstand, why turning toward the reare should be a turning from the enemy; Or toward the front a turning to the enemy: Considering that whether

^a Plut. in Pyrrh.

^b Xenoph. Cyrop., lib. 7. § 29.
^c D.

^b Polyen. lib. in Agefilao.

whether soeuer you turne faces, the enimie is imagined to be there; faces and weapons being to be opposed alwaies against the enimie, which is the onely end of turning. Ælians opinion seemeth to haue more probability in it, at least if I conceiue the right reason. For I take it thus: That seeing the Græcians (as the Romans likewise) were Targettieres, and caried their targets on their left side, and in fight advanced that side alwaies neerest the enimie, which they sought to couer with their targets, that therefore the turning about to the enemy, was called turning to the Target; as contrarily turning to the right side, on which side the Pike was caried, and which being naked of such defensue armes was called the open side, and therefore further remoued from the enemy, might for the same cause be tearmed turning from the enemy. So that I take turning about to the enemy, and turning about to the target to be all one, as also turning about from the enemy, and turning about to the Pike, howsoeuer the name differ. This is my coniecture, which I shall imagine to be true, till I finde some man, that will bee pleased to giue me a more probable reason: I only adde now the words of command in this motion.

Faces to the right hand.

Faces to the left hand.

Faces about, to the right or left hand.

The figure sheweth the manner.

As you were.

Of wheeling, double, and treble-wheeling of the battaile, and returning to the first posture.

CHAP. XXVI.

Epistrophe (or wheeling) is when the battaile being so closed, that no man can turne, or twice turne his face by reason of the neerenesse of man to man, it wholly, and jointly wheeleth (as a ship, or some other body caried about) the order thereof remaining vndissolued. VVhen the wheeling is to the Pike, we warne the right-corner-file-leader to stand still (as it were the hooke of a doore hinge) and the rest of the battaile proceeding forward to turne about the same file-Leader like the doore. In the same manner is wheeling to the Target; It may be thus defined: *Epistrophe* is, when shutting the battaile by gathering close the Followers, and Side-men, we turne it wholly (as the body of a man) toward the Pike, or Target, it being caried about the corner-file-leader, as about a Center, and, changing the place of the front, transference the countenance of the souldier to the right, or left hand; the followers and sidemen euery one remayning in file and ranke as before. How it is to be done I will shew hereafter.

Anastrophe, or returning to the first posture, is the restoring of the wheeling to the place, where the battaile first stood close, before it beganne to wheele. *Perispasmos*, or wheeling about, is the motion of the battaile in two wheelings, so that thereby the front commeth to the place of the reare. *Eperispasmos*, or treble wheeling, is the motion of the battaile in three wheelings, so as, when it turneth to the Pike, the front commeth about to the left flanke; when to the Target, it commeth about to the right flanke.

Notes.

Notes.

This Chapter hath a diuers kinde of turning from the other mentioned in the last Chapter, which for distinction sake, is called *Epistrophe*, or wheeling. The other turned no more, then the souldiers faces, euery man yet keeping the same ground, be had before. This wheeles the whole body, and changeth the place of the Phalange either to the right, or left hand, or to the reare. And as there was in the turning oftentimes a particular motion of euery particular souldier to the right, or left hand, called *Clitis*, and an other turning about called *Metabole*: so is there in this a generall wheeling of the whole body to the right, or left hand, called *Epistrophe*, and an other wheeling about to the reare called *Perispasmos*. But let vs heare the description.

¹ *Epistrophe* (or wheeling) is, when the Battaile] Shortly *Epistrophe* is no more, then the first turning of the battaile to the right or left hand. In doing whereof first the files must be closed to the hand, you meane to wheele, then the ranks. Then the corner file-Leader on the same hand is to stand still, then all the rest keeping their files, and ranks closed, to turne to the same hand jointly about the Corner-file-leader circle-wise, who is to moue by little, and little, till he haue turned his face to that side, which was intended. And when the first ranke is euen with him, and the rest wheeled enough to the same hand, they are to stand still: The words of the definition of *Epistrophe* (or wheeling) are plaine enough in Ælian; I neede use no exposition. Now because in exercise we relie not upon one forme of motion alone, but acquaint our souldiers with all the kindes; It is necessarie to bring the body againe to the first place, to the end we may proceede in the rest. This reducing to the first Posture is called *Anastrophe*, by which the battaile returneth, but by a contrary hand, to that, to which the *Epistrophe* was made. And but for changing the hand the wheeling backe againe is all one with the wheeling forward. Wee shall see hereafter how it is done. To bring the battaile to haue the front, where the reare was, you must use a double wheeling. And that is called *Perispasmos*. Which commeth of two *Epistrophes*, and is made either to the right, or left hand. Onely it must be obserued, that if the *Perispasmos* (or wheeling about) be to the right hand, the *Anastrophe* (or reducing to the first posture) must be to the left. Contrarie it is if the *Perispasmos* were to the right hand.

² *Eperispasmos*] I could neuer hitherto conceiue any use of a treble wheeling (for so Ælian takes the word) vnlesse a *Perispasmos* were first made, and the battaile had the front already brought to the reare, and so an *Epistrophe* added from the reare to the same hand. Otherwise seeing that one wheeling is sooner made, then two, and therefore sooner then three, I see no neede of three wheelings, especially seeing we may doe that, wee desire with one. For example, let vs wheele our battaile thrice to the right hand, the front will come to be in the place of the left flanke. The same will be performed as well with one wheeling to the left hand. Et frustra fit per plura, quod potest fieri per pauciora, especially in matter of warre, where the least moment of time often carrieth the whole businessse. The like may be said of *Eperispasmos* to the left hand.

The use of the motions of wheeling, and double wheeling, is, when the battaile being closed, and the enemy comming to assault you in any other one place, then the front, you seeke to bring the best men to fight. For if you be to be charged in two places at once, or more, wheeling helps little; except it be to turne the front to one enemy, and in that case your onely shift is, to turne faces against them, that come to charge, on what side soeuer they come. Examples of these two motions, I meane *Epistrophe*, and *Perispasmos* meete vs almost in euery Greeke Historie. Of which I will represent one, or two, especially of the latter

a Plut. in Pyrrh.

latter; the rather because practise giueth both light, and life to precepts. ^a Plutarch recounteth, that after King Pyrrhus, had in vaine assaulted Sparta, he was invited by an Argiuan named Arislaus to receiue Argos into his protection, and that hee marched thitherward with his armie. Ariens the king of Lacedemonia laying ambushes for him, and taking the principall streights, by which he was to passe, charged his reare, wherein the Galatians and Molossians were. When Pyrrhus heard the bruite and noise, he sent his sonne Ptolomy with the band of Companions to aide, himselfe with all speede marching out of the streights, led on his armie. The medly being sharpe about Ptolomy, and the chosen Lacedemonians commanded by Eualcus standing close to their busines, Oroesus a Candiote of Apera, valiant of his hands, and swift of foote, running crosse against the young Prince gaue him a deadly stroke and ouerthrew him. His fall made the rest to flie. And the Lacedemonians hauing the victorie, and following the chase came into the Champian ground still killing but not remembering they were not followed with armed foot. Vpon whom Pyrrhus, hauing euen then heard of, and being much moued with the death of his sonne, wheeled about the Molossian horsemen. And himselfe first aduancing vpon the spurre imbrued himselfe with the slaughter of Lacedemonians. He alwaies seemed mighty, and terrible in armes; but then he exceeded himselfe in daring and valor. Forturning his Horse vpon Eualcus who shunning him, shifted aside, and with all strooke at his bridle hand as he passed by, and wanted but little of cutting it off. But missing the hand, he light vpon the raines, and carued them quite a sunder. Pyrrhus with all strooke him thorough the body with his Launce. Then leaping from his horse, and fighting a foote, hee cut in pieces the chosen Lacedemonians, that fought to recover the body of Eualcus. This was the fight that Pyrrhus made by wheeling about his Horsemen against the Lacedemonians, that followed vpon his Reare. Another example of Wheeling about is reported by Polybius, and it is of Amilcar Annibals father, this is the history. The mercenary souldiers of the Carthaginians reuolted from them, and ouerthrew some of their Generalls, and shut them vp within the Citie of Carthage, possessing both other streights, that led into the Countrey, and also a bridge laide ouer a riuer called Macar, which riuer was not passable, but by that Bridge. Besides, they built a City for defence of that Bridge. Amilcar seeking to dislodge the enemy from that Bridge, and hauing no way to come at them conveniently; obserued, that when certaine windes blew, the mouth of the riuer toward the sea was commonly filled vp with sand, and would giue passage sufficient for his armie. Finding then a fit time, hee put ouer his army in the night, and before day, or ere any man knew of it, made himselfe Master of the passage; and presently led against them, that held the bridge. Spendius (hee was one of the chiefe Rebels) hearing thereof, aduanced to meete Amilcar in the plaine, and both ten thousand from the City at the bridge foote, and fifteen thousand more from Utica, came out one to aide another, thinking to wrappe in the Carthaginians betweene them; who were not aboue ten thousand Souldiers of all sorts, and 70 Elephants. Amilcar led on his armie. Before were the Elephants, the horse, and light armed followed next, the armed foote came last. And perceiuing the enemy, that followed his Reare, pressed hard vpon him, he commanded his whole armie to turne about. Those that were in the Vanguard of the march hee willed to returne to him with speede; the other, that at first had the reare, hee wheeled about, and straight opposed against the enemy. The Libians and mercenaries imagining the Carthaginians fled for feare, fell vpon them disorderly, and boldly came

to

to hands. But when they saw the Horsemen, being now turned about, and come vp neere to the foote, and already put in order, make a stand, they themselves, by reason they looked for nothing lesse, fell into a feare, turning their backs fled presently, as before they gaue on vnadvisedly, and straglingly. And some of them falling vpon their owne people, that were comming on, wrought both theirs, and their owne destructions: other some were trampled vpon, and trode to death, by the horse, and Elephants, that followed the chase. Thus farre Polybius. And thus farre of Wheelings. The figure, and words of command are referred for the 32 Chapter, where the manner of wheelings, and returning to the first posture is set downe.

Of filing, ranking, and restoring to the first posture.

CHAP. XXVII.

TO file is, when euery particular man keeping equall distance from other standeth in his owne file lineally betwixt the file-Leader and bringer-vp. To ranke is, to be in a right line euen with his sidemen in the length of the battaile. ¹ To restore to the first posture is, to bring the sight of the Souldier to the same aspect, he had before the first turning. As if his face were at first towards the enemy, being commanded to turne towards the Pike, and thence to returne to his first posture, hee is againe to returne his face toward the enemy.

Notes.

OF filing, and ranking enough is spoken before. ¹ To restore to the first posture] This motion differeth from Anastrophe before specified. For Anastrophe bringeth backe againe the whole body to the first place after a Wheeling: This the Souldiers faces particularly to the first aspect. So that this is used after the making of an Anastrophe. For alwaies in motions it is requisite, that the Souldiers faces moue forward. To moue backward hath many inconueniences of stumblings vpon vneuen ground, or stones, or pittes, or stubbes, or such like. Which is the cause that in Anastrophe after a Wheeling, Ælian willeth, that the Souldiers turne their faces the contrarie way first, then moue on, till they haue recovered their first ground, then open rankes, and files, and lastly to restore to the first aspect. And as it differeth from Anastrophe so differeth it likewise from Metabole. Metabole only turned faces about, this setteth the Souldier in his former posture, not onely for his face, but for his armes, also, which are ordered as at first. The wordes wherein this motion is expressed by Ælian are Ep orthon apodounai, and Eis orthon apocatastesai, which is interpreted by Gaza in arrectum reddere, to restore vp right, by Arcerius rectum reddere, to restore right, and so the words sound. Ælian interpreteth it to set againe the Souldiers sight in the same aspect in which it stood at first: as if being placed with his face against the enemy he be commanded to turne his face to the Pike, and then againe to restore his face to his first posture, he must returne, and set his face against the enemy. Ælian therefore referreth it to the sight, he first had, which if it bee the right meaning, how can it

a Pausan. in
Articis 43.
b Pausan. in
Corinth 89.
c Pausan. in
Corinth. 87.

be upright, or right, more in that, then in any other posture. For the Souldier not onely in front, but in flanke, and in the reare carrieth himselfe upright, or right. I doubt not, but that it may be applied to the upright standing of men, as appeareth by sundry places of Pausanias: Wherever seeth, that Minervas image set^a in the Temple Parthenion standeth upright, orthon est, and in another place, that in Corinth^b in the Temple Pantheon, there were two Images of Mercurie standing upright, Ortha, ^c and that in the Temple of Fortune the image of Fortune was carved of Parian-stone, and stood upright; Orthon: and that in Neptunes Temple situate in the Corinthian Isthmus, the images of Amphitrite and Neptune stand in a Chariot, and the boy Palemon upright upon a Dolphin, Orthos. In all which places Orthos designeth the site of men. But here, as I take, it cannot be so applied. Because in every motion, not onely in this, the men stand upright. How then can they be restored to their standing upright, when they doe it already. I take the originall of the appellation to come from another cause, and that is from the ordering of the Pike. For when the battaile is first set in the field, every Souldier standes with his Pike ordered, that is upright. For to order a pike is to set the butt end on the ground before the Souldier somewhat wide of his right foote, and to hold it upright with the right hand borne even with the shoulder. But when you beginne, or continue any motion, the manner is to advance, or to shoulder the Pike, and so to proceede. But being commanded to returne to the first posture, it must be ordered againe. So that the first posture of an armed man is to stand with his pike upright. And after many motions and windings, he at last returneth to the same posture, which I take the command of Ep'orhon apodounai to signifie. Now that I may not seeme to relie upon a probable conjecture alone, I will bring witness for the confirmation of my opinion. It is reported by^d Diodorus Siculus, that Agesilaus the Lacedemonian King with an armie of eighteen thousand foote, and fifteen hundred horse, invaded Boeotia. The Athenians before hearing of Agesilaus comming had sent five thousand foote, and 200 horse to aide the Thebans, who gathering their armie together seized upon a long narrow hill distant 20 furlongs from the City; And making the hard access to the place a kinde of fortification against the enemy, they there waited his comming, fearing to hazard upon even ground in regard of the renowne, and glory of Agesilaus. Agesilaus, having imbattailed his troupes, led them against the Boeotians; and approaching neere, sent his light armed to sound their disposition to fight, which being easily repulsed by the Thebans by the advantage of the higher ground, hee advanced the rest of his forces being imbattailed in such manner, as might give greatest terror. Chabrias the Athenian willed his Souldiers to a waite the enemy contemptuously both keeping their first array, and their Targets at their knees, and continuing their Pikes upright ordered; who when they jointly as upon a word given, did as they were commanded, Agesilaus both wondering at the good order, and at the assured fashion of the enemy thought it not fit to strive with unequall ground, and by forcing them to fight, to compell them to be valiant, whether they would, or no. Hitherto Diodorus Siculus of the Strategem of Chabrias against Agesilaus, which consisted in the contempt of Agesilaus, and all his forces: First in not stirring one foote, to meete the enemy, then in keeping the array they held before; further in sincking their Targets to their knees; Lastly in continuing the former order of their Pikes, that is not making ready to charge, but remaining with their Pikes ordered, as they were at first. Agesilaus advancing his armie thought to strike a feare into his enemies; Chabrias trusting to the strength of the place, scorned the Invasion of Agesilaus, conceiving, he would not be so hardy to adventure the fight upon so great an inequality of ground. He therefore willed the

be upright, or right, more in that, then in any other posture. For the Souldier not onely in front, but in flanke, and in the reare carrieth himselfe upright, or right. I doubt not, but this may be applied to the upright standing of men, as appeareth by sundry places of Paulanius: Who reberseth, that Minervas image set in the Temple Parthenion standeth upright, orthon est, and in another place, that in Corinth in the Temple Pantheon, there were two images of Mercurie standing upright, Ortha, and that in the Temple of Fortune the image of Fortune was carved of Parian-stone, and stood upright, Orthon: and that in Neptunes Temple situate in the Corinthian Isthmus, the images of Amphitrite and Neptune stand in a Chariot, and the boy Palemon upright upon a Dolphin, Orthos. In all which places Orthos designeth the site of men. But here, as I take, it cannot be so applied. Because in euery motion, not onely in this, the men stand upright. How then can they be restored to their standing upright, when they doe it already. I take the originall of the appellation to come from another cause, and that is from the ordering of the Pike. For when the battaile is first set in the field, euery Souldier standes with his Pike ordered, that is upright. For to order a pike is to set the butt end on the ground before the Souldier somewhat wide of his right foote, and to hold it upright with the right hand borne euen with the shoulder. But when you beginne, or continue any motion, the manner is to aduance, or to shoulder the Pike, and so to proceede. But being commanded to returne to the first posture, it must be ordered againe. So that the first posture of an armed man is to stand with his pike upright: And after many motions and windings, he at last returneth to the same posture, which I take the command of Ep'orhon apodounai to signifie. Now that I may not seeme to relye upon a probable conjecture alone, I will bring witness for the confirmation of my opinion. It is reported by Diodorus Siculus, that Agesilaus the Lacedemonian King with an armie of eighteen thousand foote, and fifteen hundred horse, inuaded Beotia. The Athenians before hearing of Agesilaus comming had sent five thousand foote, and 200 horse to aide the Thebans, who gathering their armie together seized vpon a long narrow hill distant 20 furlongs from the City; And making the hard access to the place a kinde of fortification against the enemy, they there waited his comming, fearing to hazard vpon euen ground in regard of the renowne, and glory of Agesilaus. Agesilaus, hauing imbattailed his troupes, led them against the Beotians; and approaching neere, sent his light armed to found their disposition to fight, which being easily repulsed by the Thebans by the aduantage of the higher ground, hee aduanced the rest of his forces being imbattailed in such manner, as might giue greatest terror. Chabrias the Athenian willed his Souldiers to awaite the enemy contemptuously both keeping their first array, and their Targets at their knees, and continuing their Pikes upright ordered; who when they jointly as vpon a word giuen, did as they were commanded, Agesilaus both wondering at the good order, and at the assured fashion of the enemy thought it not fit to striue with vnequall ground, and by forcing them to fight, to compell them to be valiant, whether they would, or no. Hitherto Diodorus Siculus of the Strategem of Chabrias against Agesilaus, which consisted in the contempt of Agesilaus, and all his forces: First in not stirring one foote, to meete the enemy, then in keeping the array they held before; further in sincking their Targets to their knees; Lastly in continuing the former order of their Pikes, that is not making ready to charge, but remaining with their Pikes ordered, as they were at first. Agesilaus aduancing his armie thought to strike a feare into his enemy; Chabrias trusting to the strength of the place, scorned the Brauado of Agesilaus, conceiuing, he would not be so hardy to aduantage the fight vpon so great an inequality of ground. He therefore willed the souldiers

the images of Amphitrite and Neptune stand in a Chariot, and the boy Palemon up-
right upon a Dolphin, Orthos. In all which places Orthos designeth the line of men.
But here, as I take, it cannot be so applied. Because in every motion, not only in this, the
men stand vpright. How then can they be restored to their standing vpright, when they
doe it already. I take the originall of the appellation to come from another cause, and
that is from the ordering of the Pike. For when the battaile is first set in the field, eu-
ry Souldier standes with his Pike ordered, that is vpright. For to order a pike is to
set the butt end on the ground before the Souldier somewhat wide of his right foote, and
to hold it vpright with the right hand borne euen with the shoulder. But when you be-
ginne, or continue any motion, the manner is to aduance, or to shoulder the Pike,
and so to proceede. But being commanded to returne to the first posture, it must bee
ordered againe. So that the first posture of an armed man is to stand with his pike vp-
right. And after many motions and windings, he at last returneth to the same posture,
which I take the command of Ep'orthon apodounai to signifie. Now that I may not
seeme to relye upon a probable coniecture alone, I will bring witness for the confirma-
tion of my opinion. It is reported by Diodorus Siculus, that Agesilaus the Lacede-
monian King with an armie of eighteen thousand foote, and fifteen hundred
horse, inuaded Beotia. The Athenians before hearing of Agesilaus comming had
sent fise thousand foote, and 200 horse to aide the Thebans, who gathering their
armie together seized vpon a long narrow hill distant 20 furlongs from the City;
And making the hard access to the place a kinde of fortification against the ene-
mie, they there waited his comming, fearing to hazard vpon euen ground in re-
gard of the renowne, and glory of Agesilaus. Agesilaus, hauing imbattailed his
troupes, led them against the Beotians; and approaching neere, sent his light armed
to sound their disposition to fight, which being easily repulsed by the Thebans by
the aduantage of the higher ground, hee aduanced the rest of his forces being
imbattailed in such manner, as might giue greatest terror. Chabrias the Atheni-
an willed his Souldiers to awaite the enemy contemptuously both keeping their
first array, and their Targets at their knees, and continuing their Pikes vpright or-
dered; who when they iointly as vpon a word giuen, did as they were comman-
ded, Agesilaus both wondering at the good order, and at the assured fashion of
the enemy thought it not fit to striue with vnequall ground, and by forcing them
to fight, to compell them to be valiant, whether they would, or no. Hitherto Di-
odor Sicul. of the Strategem of Chabrias against Agesilaus, which consisted in the
contempt of Agesilaus, and all his forces: First in not stirring one foote, to meete the
enemy, then in keeping the array they held before; further in snacking their Targets
to their knees; Lastly in continuing the former order of their Pikes, that is not ma-
king ready to charge, but remaining with their Pikes ordered, as they were at first. Age-
silas aduancing his armie thought to strike a feare into his enemy; Chabrias trusting to
the strength of the place, scorned the Brauado of Agesilaus, conceiuing, he would not be so
hardy to aduenture the fight vpon so great an inequality of ground. He therefore willed the

diers not to alter their posture, but to continue as they were. The words concerning the Pike are: En ortho to doratimenein. That is to continue their pikes vpright (En ortho) Now whether the same be the posture, that the Taſticks deſcribe, when they ſpeake or reſtoring Ep' ortho, vpright, I reſerre to the iudgement of the Reader. ^a Polienus remembering this Stratagem uſeth ſome what different words, and yet conſenteth in meaning. Chabrias ſaith he, commanded his Souldiers not to runne out againſt the enemy, but quietly to ſtand ſtill holding their pikes before vpright, and their Targets before their knees which they were wont to doe, when they would a little eaſe themſelues of the weight of their Targets. Where Diodore, hath en ortho to doratimenein, to continue their Pikes vpright. Polienus hath protinomenous ta dorata ortha, holding before them their Pikes vpright. But both haue pikes vpright, and Diodorus his Continue hath relation to the Poſture they were in, which Chabrias would not haue them to alter: Polienus his hold before to that they were commanded to doe. In ordering of Pikes at this day I haue ſhewed, that the Souldiers hold them vpright, the but end ſet on the ground before, and ſome what wide of their right foot.

^b Æmilius Probus reciting this hiftorie peruerteth the Stratagem: He ſaith that Chabrias forbad the Phalange to giue backe, and taught his Souldiers to receiue the enemies charge kneeling with one knee, the other ſet againſt the Target, and with the Pike abaſed. Wherein hee quite diſſenteth from Diodore, and Polien. Diodore ſaith, the command was to keepe their array; Polienus not to runne forward, but quietly to ſtand ſtill; Probus not to giue backe. Probus ſaith, they ſhould kneele with one knee, and reſt againſt the Target with the other; Diodore that they ſhould hold their Targets funke to their knees; Polienus that they ſhould carry their Targets before at their knees. Probus that they ſhould abaſe, and charge their Pikes; Diodore that they ſhould continue, and order them vpright; Polien that they ſhould hold their Pikes vpright. So that Diodore and Polien agree, and expound one another: Æmilius Probus bringing in a new hiftorie diſſenteth, as I ſaid, from the other two; eſpecially in making that to be a forme of fight preſcribed by Chabrias (a ſimple forme to receiue the charge upon their knees) which was a contempt, to ſhew how little, eſpecially in that ſtrength of ground, he regarded Ageſilaus; which contempt alſo made Ageſilaus retire, not doubting but it proceeded from a great aſſurance of the enemy. Therefore as I ſaid I take theſe words ep' orthon apodounai, not only to appertaine to the aſpect of the Souldier, but alſo (and that much rather) to the erection, and ordering of Pikes.

Of Countermarches, and the diuers kindes thereof, with the manner how they are to be made.

CHAP. XXVIII.

There are two ſorts of Countermarches, one by file, the other by ranke; each of theſe againe is diuided into three kindes. The firſt called the Macedonian: The ſecond the Lacedemonian: The third the Choraan, which is alſo the Perſian, and the Cretan. The Macedonian is that, which leauing the ground, it firſt had, taketh in lieu thereof the ground, which was before the front of the Phalange, and turneth the aſpect of the Souldier backward [where before it was forward.]

L 3

2 The

I

a Piv
Artic
b Pm
Coru
c Pm
Coru

d D
lib.

2 The *Lacedemonian* is that, which leauing likewise the ground it first had, taketh in steed thereof, the ground which was behinde the Reare of the *Phalange*, and turneth also the face of the Souldier the contrary way.

3 The *Persian* is the *Cretan*, and *Choræan*: This keepeth the same ground of the *Phalange*, euery souldier taking another place for that, he had, the file-Leader the place of Bringer-*vp*, and so the rest in order; and turneth also the face of the Souldier the contrary way.

4 *Counter-marches* by ranke are made, when a man would transerre the winges into the place of the Sections; and the Sections into the place of the wings, to the end to strengthen the middest of the battaile. Likewise the right hand parts into the left hand parts, and the left hand parts into the right hand parts. They that feare to counter-march the *Phalange* in grosse the enemy being at hand, doe it by *Synmagmas*.

I will now let downe, in what manner counter-marches ought to be made.

The *Macedonian counter-march* by file is said to be, when the file-leader turneth about his face, and all the rest with the Bringer-*vp* go against him on the right, or left hand, and passing on to the ground before the front of the *Phalange* place themselves in order one after another, according as the file-Leader himselfe hath turned his face. Therefore it maketh shew to the enemy appearing in the Reare, of running away: Or it is when the file-Leader turneth about his face, and the rest passing by him on the right or left hand place themselves orderly one behinde another.

But the *Lacedemonian* is, when the Bringer-*vp* turneth his face about, and all the rest turning also their faces, and proceeding forward together with their file-Leader order themselves proportionably in the ground, which was behinde the Reare of the *Phalange*. Wherefore to the enemy appearing behinde, it makes a semblance of falling on. Againe the *Lacedemonian* is, when the file-Leader turning his face about to the Pike, or Target transferreth the whole file to another place equall to the first; and the rest following stand, as before, behinde him. Or else, when the Bringer-*vp* turneth his face about, and hee, that stood next before him, passing by on the right or left hand, is placed againe next before him, and the rest following are placed one before another in their former order till the file-Leader be the first.

The *Choræan* is, when the file-Leader turning about toward the Pike, or Target, precedeth the file, and the rest follow, till the file-Leader haue the place of the Bringer-*vp*, and the Bringer-*vp* the place of the file-Leader. And these are the Counter-marches by file.

In the same manner are *Counter-marches* made by ranke in case a man would counter-march by ranke. For euery ranke Counter-marching either keepeth the same ground, or changeth the right hand place, or else the left hand place, of the battaile, one of which must needs fall out, and neuer faileth.

Notes.

T He two former motions are performed, one in close Order, the other in all Orders; Epistrophe when the battaile is shut so close, that (as *Ælian* saith) a man can turne his face neither the one way, nor the other. Clisis in open Order, Order, and close Order. The two following motions, Counter-march, and Doubling, one is done in open Order, the other for the most part in open order too; and yet sometimes in Order, and close

See Leo cap. 7.
§ 3, 34.

close order; as we shall see in due place. This Chapter handleth Counter-marches, the next Doublings. Counter-march is a motion, whereby euery souldier marching after other, changeth his front for the reare, or one flank for the other. For there are two kinds of Counter-marches, one by file, and the other by ranke. And each of these is againe diuided into three; the first called the *Macedonian*; the second, the *Lacedemonian*; the third the *Choræan*, or *Cretan*. A Counter-march by file is, when euery souldier followeth his Leader of the same file; By ranke, when euery souldier followeth his sideman of the same ranke in the Counter-march.

1 The *Macedonian Counter-march*] In this Counter-march, the purpose of the Commander is to turne the front of his battaile against the enemy that sheweth himselfe in the Reare; and withall to take the ground that lyeth before the front of the *Phalange*. It is called the *Macedonian Counter-march* (saith *Ælian*) because the *Macedonians* were the inventers of it. Which of the *Macedonians* he telleth not, but excludeth *Philip*, and *Alexander*, who both used the *Lacedemonian Counter-march*. And before their times I haue not read of any warlike Kings of *Macedonia*. The manner of it is this; First all the File-leaders turne their faces about either to the right or left hand; then the next ranke passeth thorough by them on the same hand; and being come to their distances, place themselves directly behind their File-leaders, and then turne about their faces the same way. And so the third ranke after them, and the fourth, and all the rest, till the Bringers-*vp* be last, and haue taken the reare of the battaile againe, and turned about their faces. The figure expresseth not well the action. For in it the Bringers-*vp* begin first to counter-march, which according to *Ælian* should moue last. Yet may this Counter-march be done, as the figure is. But I take *Ælian's* way to be easier, and readier. And it may be also, that the Counter-march expressed in the figure is lost in the text. For one of the *Lacedemonian Counter-marches*, which proceedeth the contrary way, beginneth the motion with the File-leaders, as this doth with the Bringers-*vp*, as wee shall straight see.

2 The *Lacedemonian counter-march*] In this Counter-march the proceeding is contrary to that of the former; that tooke the ground before the *Phalange*, this takes the ground after. In that the mouing was from the Reare to the front, in this from the front to the reare. This is the invention of the *Lacedemonians*. *Ælian* describeth it to be done in two manners: One, when the Bringers-*vp* first turne about their faces, and the next ranke likewise turning faces beginneth the Counter-march, and euery man thereof placeth himselfe directly before his Bringer-*vp*, and the third doe the like; and so the rest, till the ranke of the File-leaders come to be first: The other, when the File-leaders begin the Counter-march, and euery one in their files follow them orderly. The figure expresseth this last. *Ælian* preferreth the *Lacedemonian Counter-march* before the *Macedonian*: because in it the souldiers seeme to fall on, and goe to the charge; where in the *Macedonian* they seeme to flie. There are notwithstanding times, when it is better to use the *Macedonian*. As in case you meane to march on, and not to fight with the enemy, except you be compelled: Or else you seeke to gaine some ground of advantage. For the *Macedonian* continueth still the march, and stayeth not; the *Lacedemonian* returneth upon the enemy, and so loseth ground in marching. *Agésilas* after victorie gotten against the *Argives*, against whom he stood in the right winge, hearing that the *Thebans* had beaten the *Orchomenians* in the left winge, used the *Lacedemonian Counter-march* against them. The words of *Xenophon* sound thus: Here the strangers were about to crowne *Agésilas* (thinking he had got the victory) when newes was brought that the *Thebans*, after they had broken the *Orchomenians*, had forced a passage as farre as the baggage. Then *Agésilas*, counter-marching his *Phalange*, led against them.

The

Xenoph. hist.
græc. lib. 4.
§ 19. C.

The Thebans perceiuing their Confederates were fled vp to the mount *Helicon*, closed their troupes together, as neare as they could, seeking to open a way by force, and to get vp vnto them. *Agésilus* albeit he might by giuing way to the formost haue followed them at heeles, and charged the reare, yet did he it not, but met the Thebans front to front. Thus encountering, and clashing their Targets together they fought, thrust on, killed, and were killed. In fine some of the Thebans broke thorough to *Helicon*; other some, as they fought to escape, were left dead on the place. *Agésilus* here followed the chase upon the Argives toward the mount *Helicon*: The Thebans upon the Orchomenians the contrary way towards the enemies Campe. The Thebans seeing their confederates fled to the mount *Helicon*, returned toward them, *Agésilus* countermarched to meete them, met them, and fought with them. For the Countermarch he used, I make account it was the Lacedemonian, himselfe being a Lacedemonian. And he used it to meet the Thebans brauely in front. The same *Agésilus*, after he had by night incamped in a peece of ground behind *Mantine* incompassed about with mountaines, perceiuing the next morning, that the *Mantineans* gathered together vpon the toppes, that lay right ouer the head of his Reare-gard, determined to lead his Armie out of the place with all speed. Now if himselfe should lead, he feared the enemy would giue vpon his Reare. Therefore standing still, and turning his armes against the enemy, he commanded the last of the Phalange to march backe againe from the Reare, and come vp to him; and so at once he brought his Armie out of the streights, and made it by little, and little stronger. When the Phalange was thus doubled, he proceeded in that order into the *Champaigne*, & there againe reduced the depth of the armed foote to 9 or 10 men in euery file. This place of *Xenophon*, if it be not corrupted, is very obscure. And I cannot tell whether to take it for doubling of the front, or the Macedonian countermarch. The words make for a doubling. For *Xenophon* saith plainly, the Phalange was doubled. Besides he addeth, it was made by little and little stronger; which could not be done with a Countermarch. And that a deepe Phalange, or Hearse, (such as this by the euenings march, and the straights it entred, seemeth to be) is made stronger by doubling the front, there is no question. On the other side, the streights, thorough which it was to passe, perswade me, it should be a Macedonian Countermarch. For in doubling the front the length still increaseth; & the manner is not to enlarge, but to extenuate the front, when an Armie is to be conueighed thorough a narrow place. And *Xenophon* saith expressly, that *Agésilus* led it thorough the streights into the *Champaigne* in that order, so which it was reduced last; & that in the *Champion* the depth of the Armed was lessened, and brought to 9 or 10; for there *Agésilus* imbattailed his Phalange to receiue the enemy, if he would charge. And in a march through straight waies the front is commonly narrowed, and proportioned to the way; but in open ground the Phalange is againe brought to the iust length. So that it seemeth the depth was much, before it came into the plaine; because in the plaine it was brought to 9 or 10 men, and therefore no doubling. Lastly *Agésilus*, (and the front I doubt not of the Phalange with him) turned face to the enemy, before the Reare came vp to him. which is done in no other motion, than the Macedonian countermarch. In which all the File-leaders first turne about their faces toward the enemy, and then the whole battaile marcheth against the File-leaders, and placing themselves orderly behind them, turne their faces the same way, that they haue done before. Now where it is in *Xenophon*, that *Agésilus* hauing gained the *Champaigne*, extended his Armie to 9 or 10 Targets, I suspect a fault to be in the number of 9; and that it ought to be read 8 or 10. To extend a Phalange is to draw it out in length. the length is the space betwixt the point of both wings. When he saith he extended it to

10,

10, the meaning is he drew it out so farre in length that he left but 10 in depth. Ten is the decas, whereof I spoke before, and I haue likewise noted, that the Lacedemonians for the most part, made the depth of their battaile 8. The number of 9, as all other unuener numbers, was reiected by the Tacticks, as unfit for doublings. So that mine opinion is that *Xenophon* at the first wrote 8 or 10, not 9 or 10, howsoeuer 9 be crept into the place of 8. But to returne to *Agésilus*, admit he used doubling of ranks, or of the front in retiring out of the *Mantinean* straights, yet giue me leaue to be of opinion, that the Macedonian Countermarch had bene the fittest motion for that purpose. For himselfe being thereby cast in the reare, he had both preuented the charge of the enemy (which he feared) and yet wounde better out of the straights, the long Herte, which still remained in the Macedonian Countermarch, being more proportionable to issue out of a narrow place, then a broad-fronted Phalange, which ariseth out of doubling the front.

3. The Persian is the Cretan or Choraean] This Countermarch is called the Persian, and Cretan, because it was used amongst the Persians and Cretans. And it was termed the Choraean also, of the similitude it had with the solemn Græcian dances upon stages; the company, that shewed themselves in such dances being called Chorus. Who in their daunces ordered themselves into files, and ranks, as souldiers doe in battaile; and moving forward to the brinke of the stage, when being straightened by the place, they could passe no further, they retired one through the ranks of the other, exceeding not the bounds of the place, as is done in this Countermarch. The other two kinds of Countermarch changed the ground, they had before. The Macedonian tooke the ground before the front; The Lacedemonian the ground after the reare. The Choraean holdeth the same ground, & beginneth the motion with the File-leaders, who notwithstanding proceeded no further, then thither, where the Bringers-up stood, their files following them; & euery souldier keeping the same distance, he had before the moving. The figure sheweth the manner of it. These Countermarches by file, are to be made, when the enemy appeares in the reare, and cometh to charge vs. And they are made to the end, to bring our best men, that is the File-leaders, to the encounter. Wherein notwithstanding there is a caution to be held, that if the enemy be very neare, or so neare, that we cannot conveniently counter-march, before he come up to vs, we forbear, lest we fall into disorder, and in disorder be easily defeated. In which case the best remedy is to turne faces about, and so receiue him. Hitherto of Countermarches by file.

4. Countermarches by ranke are made] The ends of Countermarches by ranke are two in *Ælian*: one to strengthen the middest of the battaile; the other to strengthen the wings. If the strength of the enemies battaile, lie most in the middest, reason of Warre would, that we should oppose our greatest strength against the middest. If in the wings against the wings. There is an other cause of strengthening the wings, namely if the enemy be ready to charge either of them: and this strength *Ælian* would haue giuen by the Countermarch of our best men into the wings. It shall not be from the purpose to make all plaine by an example or two. Herodotus reporteth, that before the battaile of *Platæa* betwixt the Græcians, and the Persians, it was agreed betwixt the Athenians, and Lacedemonians, that where the Athenians had vanquished the Persians in the battaile of *Marathon*, and had lately slain *Masistius* the Generall of the Persian horse; and by those encounters had good experience of the Persian manner of fight; and where the Lacedemonians were imbattailed in the right wing against the Persians, the Athenians in the left wing against the Thebans, and other Græcians, that tooke part with the Persians: they should change, and the Athenians haue the right wing, the Lacedemonians the left.

These

These newes were caried to *Mardonius* the Generall of the Persians; who whether fearing the Athenians, or desirous to fight with the Lacedemonians, changed his place from the left into his right wing, to the intent to oppose against them; which when *Pausanias* saw, he returned to his right wing, and *Mardonius* to his left, the place, which he had at the beginning. *Here are changing wings on both parts; The one countering to fight in the left wing, the other desirous to fight in the right. The Countermarch by ranke from the right wing would haue fitted Pausanias: as the contrary Countermarch would haue fitted Mardonius. Yet am I led to thinke that Pausanias used a wheeling of his battaile, and so conueighed it from one wing to another behind the battaile of the other Græcians, to the end, that being shadowed by them, hee might the better hide his purpose from Mardonius. An other example I finde in Livy and Polybius both. It is this: k Pub: Scipio, who was afterward called Africanus, and Asdruball the sonne of Gisgo, being incamped neare together in Spaine brought daily out of their Campes their Armies one against an other. And after they had long stood waiting, who should begin the fight, which was done at neither hand, they conueighed them backe againe. The manner of their imbattailing was this. The Romans, and likewise the Carthagineans mingled with the Africans, had the middle, their Confederates the wings. The opinion was they should fight in that order. Scipio when he perceived this to be firmly beleued, the day before he ment to fight, made an alteration of all. When night came, he gaue the word thorough the whole Campe, that horse, and men should dine, before it was light day, and that the horsemen in Armes should keepe their horses bridled, and sadled. The day was scarce sprunge, when he sent his horse, and light-armed to beat in the Carthaginean Gardes, himselfe streight followed with the armed Legions; disposing the Romans (contrary to the settled opinion of his owne people, and of the enemy) in the wings, and receiuing the Allies into the middest. Asdrubal raised out of his bed with the cry of his horsemen, had no sooner leaped out of his Tent, and seing the tumult before the trench of his Campe, and the amazednes of his people, and the Ensignes of the Legions shining a farre off, and the field full of enemies, presently sent out his whole power of horse to vndertake the Roman horse. Himselfe issued out of the Camp with his foote, not changing any thing of his wonted manner of imbattailing. The fight of the horsemen had now a long time bene doubtfull, and could not be tried, because still, as they were beaten (which hapned a like to both) they found a safe retreat within the battailes of foote. But when the Armies were come within 500 paces one of an other, Scipio giuing a signall of Retreat, and opening his battaile, receiued all the horse, and light-armed into the middest, and diuiding them into two parts, placed them as seconds, behind the wings. Now when time was come to begin the fight, he commanded the Spaniards, who had the middle ward, to march on leasurly, and sent a messenger from the right winge (for hee commanded there) to *Syllanus* and *Martius*, willing them to stretch out the left winge, as they saw him stretch out the right; and to charge the enemy with the light-armed, and horse, before the middle wards might be able to come vp, and ioine. The wings being thus stretched out, they led with all possible speed three Cohorts of foote, and three troupes of horse a peece, against the enemy, besides the light-armed, and those that were receiued into the Reare, who followed a thwart. There was a great empty space in the middest, because the Ensignes of the Spaniards came slowly on. And now the wings were in fight, when the old souldiers Carthaginians and Africans, the strength of the Armie, were*

no:

not yet come to vse their darts, neither durst they runne into the wings to helpe them, that fought for feare of opening the middest of the battaile to the enemy, who was coming on against them. The wings were pressed with a double medley. The Horse, light-armed, & Velites, wheeling about their Troupes, charge their flanks. The Cohorts pushed on in front, to the end, to breake of the wings from the body of the battaile. And the conflict was vnequall both in all other respects, and especially because a rable, as it were of drudges, and vntrained Spaniards, were opposed against the Roman and Latin souldiers. The day being now farre spent, the Armie of Asdruball oppressed with the mornings tumult, and compelled to take the field, before they had strengthened their bodies with meat, began to faint, and faile in strength; which was the reason that Scipio lingered out the day, & made the fight somewhat late. For it was past the seventh houre, before the wings of foote attached one an other: and yet the fight came later to the middle wards. So that the scorching heat of the *south-sunne*, and the labour of standing armed, and hunger, and thirst, first afflicted their bodies, before they came to hands with the enemy. Therefore they stood leaning vpon their Targets, and being weary both in body, and minde, they gaue backe at last; keeping notwithstanding their array no otherwise, than as if the battaile being yet entire, had retreated at the commandement of the Generall. But when the victors, perceiuing them to shrink, so much the more eagerly pressed on, the brunt could hardly be indured any longer. And although Asdrubal refrained, and stopped them, that gaue ground, crying that hills and a safe place of retreat was at their backs, if they could be but intreated, to retire easily; yet feare ouercomming shame, and the enemy killing them that were next to hand, they forthwith turned their backs, and vniuersally powred out themselves into flight. This stratagem of Scipio resteth principally in shifting his best men (the Romans) into the wings; the Spaniards his worst into the middest, and in keeping the Spaniards aloofe from ioyning; and in hasting to try the day with the Romans against the weakest of the enemy. Asdrubals way to meete with this stratagem had bene to countermarch by ranke halfe his Carthaginians, and Africans into one winge, and halfe into the other. And by that means his Spaniards should haue had the middest against the Roman-Spaniards, and his old souldiers Carthaginians and Africans bene opposed in the wings against the Romans, and Latins, and the advantage eluded, that Scipio sought.

As the Countermarches by file were of three kinds, so are the Countermarches by ranke; namely the Macedonian, the Lacedemonian, and the Chorgan. The Macedonian beginneth to moue at the corner of the wing, which is nearest to the enemy, the enemy appearing to either flanke. And therefore incurreth the same imputation, that was laid vpon the Macedonian countermarch by file; as seeming to runne away, because it d'smarcheth from the enemy. Yet is there vse of it, as well as of that by file. For by this countermarch you may set the strongest part of your Armie against the enemy, and apply the weakest to some River, Lake, hill, or such like, so that the enemy can not come to incompasse it. It taketh the ground that lieth on the side of the contrary wing. The Lacedemonian taketh the ground that lieth on the side of that wing, which is toward the enemy, and bringeth the best men to be foremost against the enemy: And therefore beginneth the moving on the contrary side. The vse of it is, when your forces are such as are able to incounter the enemy, and you desire to bring your best men to fight. The Chorgan keepeth the same ground, the battaile had at first, & bringeth one wing to possesse the place of the other; Or else the Sections to possesse the place of the wings, as might haue bene

The Tactics

beene done in the last example cited concerning Scipio and Asdrubal. The manner of countermarch by ranke is contrary to the countermarch by file. In countermarch by file the motion was in the depth of the battaile, and either the front removed toward the reare, or the reare toward the front, and tooke one an others place. In this the motion is in length of the battaile flanke-wise; the wing either marching into the middest, or else cleane thorow to the other wing. In doing it the souldiers, that stand uttermost in the flanke of the wing, must move first to the contrary wing, and the rest of every ranke severally follow them in order. The figure will shew the manner of the motion. Patritius utterly mistaketh the countermarch by ranke; and groundeth himselfe upon a wrong principle, namely that in all Countermarches the File-leaders must march toward the reare, and the Bringers-up towards the front. And therefore in changing the winges into Sections, he makes the winges to fall of behind in the reare (the File-leaders wheeling about) and there to ioyne themselves as neare, as the middle Section will give leaue, and the Sections falling backe likewise, to ioyne themselves to the flanks of them, that were the winges. Whereas the nature of this Euolution is clearly to leaue the File-leaders in front, and Bringers-up in reare, as they were at first. And albeit the File-leaders then change their places, yet change they their place with none, but with File leaders, and the change is, but a change of hands, the right hand for the left, or the left hand for the right. For whereas the File-leaders of the right wing had before the right hand, now in countermarch by ranke, being transposed to the left wing, they haue the left hand of all the rest of the File leaders; as likewise the Bringers-up of the other Bringers-up.

The words of Command may be these,

For the Macedonian Countermarch by file.

File-leaders turne your faces about (to the right or left hand).
The rest of every File passe thorow in order one after another, and place your selues at your distances after your Leaders, turning your faces about; and so stand.

For the Lacedemonian Countermarch by file.

The first manner.

Bringers-up, turne your faces about (to the right or left hand.)
The rest turne your faces about and beginning at them, that are next to the Bringers-up, countermarch and place your selues in your distances before the Bringers-up, and one before an other till the File-leaders be first.

The second manner.

File-leaders, countermarch to the right, or left hand, and let every mans file follow him, and keepe true distance.

For the Chorgan countermarch by file.

File-leaders, countermarch to the place of the Bringers-up, and stand, and let your files follow you keeping their distance.

For the Macedonian countermarch by ranke.

The right or left hand corner file, turne your faces to the right, or left hand.
The rest of each ranke, passe thorough to the right, or left hand; and place your selues orderly behind your side-men keeping your distance.

For

Cap. 29

Dobbing of Ranks

Dobbing of ranks in action

The front before Dobbing of ranks

The front after Dobbing of Ranks

For the Lacedemonian countermarch by ranke.

The first manner.

The corner file, where the enemy appeareth, turne your faces to the right or left hand; The rest of ech rankes turne your faces, and passe thorough, (to the right or left hand) and place your selues before your side-men orderly keeping your distances.

The second manner.

The right or left wing, where the enemy appeareth not, countermarch to the contrary wing, and all in the Ranks follow euery man his side-man; keeping your distance.

For the Choræan countermarch by ranke.

The uttermost corner file of the right, or left wing, countermarch into the place of the left or right winge, and stand. And the rest follow ranke-wise keeping their distance.

Of doubling, and the kindes thereof.

CHAP. XXIX.

¹ **T** Here are two kinds of doubling, one of *Ranks*, the other of *Depth*, or *files*: and ² either of these double the number, or the place. ³ The length is doubled in number when of a front of 124 files we make a front (keeping the same ground) of 248 files, by inserting in the spaces betwixt file and file, some of the followers, that stood in the depth. This is done to the end to thicken the length of the battaile. If we list to recall them to their first posture, we are to command those, that were inserted, to countermarch to the place, they had before.

⁴ There are, that mislike these *doublings*, especially the enemy being at hand; and would haue a shew of doubling made, without indeed doubling the *Phalange* already ordered, by stretching out the *light-armed*, and the *Horse*, on both sides of the *wings* of the *Battaile*. ⁵ The vse of doubling the length is, when either we would *ouer-wing* the enemy, or else our selues feare to be *ouer-winged*.

The *Depth* is doubled ⁶ by inserting the second file into the first; so that the *Leader* of the second file be placed next behind the *Leader* of the first file, and the second man of the second file be the fourth man of the first file, and the third man of the second file be the fixt in the first file, and so forth the rest, till the whole second file be ingrossed into the first; and likewise the fourth file into the third, and all the euen files into the odde.

Doubling of the *Depth* by *Countermarch* is made, either when the next *side-files* in seuerall [as in the former example the second, and the fourth, and the rest of the euen files] *countermarch* to the *Reare*, and place themselves behind the *Bringers-up* of the odde files; or else the files remayning in their first place, and number, halfe of them, diuiding themselves from the other halfe, *countermarch* likewise to the *Reare*, and conveying themselves behind the other, there order themselves, and so double the depth of the *Phalange*.

If we would returne them to the first posture, we must recall those, that were conveyed to stand behind, to the place they had before the *Countermarch*.

M

Notes

THE former three Motions alter not the forme of the Phalange. For whether you turned faces, wheeled, or countermarched the Phalange, the depth and length remained one. The motion to be expressed in this Chapter induceth an other shape to the Phalange; and maketh it seeme a different body from that it was before, being by Doubling extended either in length or in depth. For Doubling the number of men, or the place of the Phalange in front, maketh the length twice as much, and doubling the same in flanke maketh the depth double to that it was before. For Doubling is nothing else, then making a military body twice as long, or twice as deepe, as it was before.

1 There are two kinde of doubling. *The Doublings are either of length or depth; Or (which is all one as Suidas saith) of ranks or files. For ranks stretch out in length, files in depth. And these againe are divided into two other kinds, the body being*

n Suidas in the word Diptasis.

2 Doubled in number or place. *That which is here called number, is called elsewhere persons; or (by Suidas) men. It is called persons in the Inferion which is made to Ælian, I know not by whom, in the precedent Chapter of Countermarches. Which because it lay thrust in betwixt the description of Countermarches, and nothing pertained to that argument, I neuer made doubt, was crept into the text. And I am rather confirmed in my opinion, because I saw it noted with an Asteriske in that Ælian (being of Robertellus Edition) which the learned Isaac Casaubon had quoted, and purposed to set forth, if untimely death had not prevented him. I will here set downe the words, because they differ not much from Ælian, and may give some light to the manner of Doubling. It is to be understood (so are the words) that a Phalange is doubled in persons, or place, when we therefore take halfe the souldiers from the Depth, and making files of them, place them even with the rest in length of the front, so that of 124 files we make 248, this is Doubling of persons. In like sort we double the place with 124 files (not increasing the number) but onely commanding some to turne to the Pike, some to the Target, till the Phalange be stretched out to a convenient length, as from 5 furlongs to 10. In the same manner is the depth doubled. For either one file is inserted into an other, man for man, so that the second file leader becomes the follower of the first, and the second man in the second file, the follower of the second in the first file, and so the rest: Or else 16 men are so extended, that they hold as much ground in length, as 32 usually doe. So fare the insertion. It followeth in Ælian.*

3 The length is doubled in number. *When the front hath twice as many files, as it had before, this is Doubling in number, or in men, or in persons. For the persons, or men, make the number in the files. And the files carrying an even depth of men, and being doubled, double the number of the front, or length. Ælian speaketh but of one kinde of doubling, namely of number, and that must be done in open order, as I said before. For the files of 16 standing in open order if you command the Middlemen (as we terme them at this day, they were called in the Macedonian files the third Enomotarchs) to double their ranks: These middlemen with the hinder halfe file march up to the front, & so doubling the front in number leaue yet the same measure of length. The figure sheweth how it is done. Yet are there two other waies, when the Phalange standeth in close order, both which double the number, and place. One is when the Middlemen divide themselves, and one halfe with their followers turning their faces march out of the right flanke: The other of the left flanke of the Phalange. And then turning their faces againe, receive*

receive up and ioine themselves in an even line with the File leaders in front; The other when all the Middle turne their faces one way and march out with the 16 followers beyond one flanke right or left; and turning faces againe receive up to the front, and stand even with the File leaders. One of these is done, when we desire to enlarge both the wings of the Phalange; the other, when but one wing. Of these two last waies, I haue set downe no figure, because I finde them not expressed in Ælian. Cleandridas the Lacedemonian, used yet an other kinde not spoken of by Ælian. Polienus telleth the story thus: n Polien. lib. 2. in Cleandrida. 9 4. Cleandridas making watre vpon the Thuriens, hauing halfe as many men againe, as they, conceiuing if they had intelligence hereof, they would hardly be brought to fight, imbattailing his Phalange, stretched it out in depth. The Lucans therefore, contemning the small number, drew out their forces in length, with intent to ouer-front the enemy; which Cleandridas perceiuing, commanded the followers to march up, and ranke with their Leaders; and by that meanes increased the length of his Phalange, and ouer-fronted the enemy; who being incompassed, and assailed with misse weapons on all hands perished intirely, excepting a few, that saued themselves by shamefull flight. The words seeme obscure to a man not acquainted with the Tactics. There are two kinde of soldiers saith Ælian in a file, Leaders, and followers. All the Leaders are the odde of the file; as the first, the 3, the 5, the 7, and so forth: the followers are the even, as the 2, 4, 6, 8. Those that are in the same ranke, are called side-men. Now, saith Polien, Cleandridas willed the followers to step forward, and to ranke, and become side-men with their Leaders: that is, he willed the even files to double their ranks with the odde; and so extenuated the depth, but increased the length of his Phalange; by which art he ouer-fronted, & inclosed the enemy on all sides. This way then to double ranks, or the length of the battaile, is to insert the even ranks man by man into the odde. All the Doublings that haue beene rehearsed, were Doublings either in number alone, or else both in number, and place. For doubling of place alone nothing is said in Ælian. The Insertion I recited, supplyeth this defect: saying, the place is doubled with 124 files, onely by commanding halfe to turne to the Pike, halfe to the Target, till the Phalange be stretched to a convenient length; as from 5 furlongs to ten; which is as much to say in few words, as to open the Phalange; Or to bring it from order, to open order. For so the front possesseth double ground, so that it had before.

4 The vse of Doubling the length is. *Two causes are assigned for the doubling of the length: One to ouerwing the enemy, the other to auoide ouerwing our selves. Cleandridas in the example aboue, performed both: For he both disappointed our selves. The Lucans that sought to incompass him, and besides incompassed, and inclosed them. The narrower the front is, it is the more in danger of ouer-fronting; being drawn out in length it is freer from enclosing, because a greater compass must be scised, before it can be inclosed. Yet are we to take heed, that in doubling of the front, we giue it not so much length that it faile in depth. The want of length, or depth is alike dangerous, and giueth advantage to the enemy. I haue touched before, and quoted Leo glancing onely at his words. Now I will set them downe as they lye: When the thicknes or depth of the Phalange (saith he) is gathered vp and made more thinne, it becometh not so to lengthen it, that it become altogether weak and without depth. For it will so come to passe, that the enemy shall easily cut it in peeces, and make a passage thorough it, and not onely seeke to incompass it before, but passing thorough the middest, bee found behinde, and there indamage it. And this it behooueth a Generall, nor onely to take heed, hee suffer not himselfe, but also indeuour to put vpon his enemy.*

k Poly. n. l. b. 4.
in Antig. au.
5. 19.

Hitherto are the words of Leo: shewing the disadvantage of a battaile too much thinned by doubling the length. But ¹ Leo elsewhere addeth an other cause of doubling, namely to make inew a faire sight of the Armie. For the more ground it taketh in front, the more will the number appeare, and the bravery of every man in particular discovered. Further Antigonus used also this doubling for a policie to beguile his enemy. ^k Polien reporteth the fact thus: Antigonus incamped against Eumenes with an armie inferior in number. And when messengers were sent often from one to an other, Antigonus at the receipt of a messenger of the enemy, commanded one of his souldiers to come running in, as it were out of breath, and all to be-sullied with dust, and to bring newes that his Confederates were come. Antigonus hearing the newes, leaped for ioy, and sent away the messenger. The next day he led his Armie out of his trench, doubling the length of his front. When the enemy heard of their messenger the newes, that was brought to Antigonus concerning his Confederates, and saw the length of his battaile doubled, they imagined that the depth was answerable to the front. And therefore they dislodged being afraid to ioyne with him.

5 There are that mislike] Countermarches, and Elians doublings of number, are dangerous the enemy being ready to charge. Because the files of the Battaille must be kept in open Order till the motions be ended, which posture is not fit to receive the charge of the enemy, as we saw out of the eleventh Chapter. The other two doublings are done in close order, whereof I made mention a little before; The one dividing the middle men in halfe, and slewing them up by the battaile on both sides; The other slewing them upon one side which you will, may be used without danger, as well when the enemy is neare, as when the fight is: in as much, as they disturbe not the battaile, but advance fresh aides against the enemy on the flanks of it.

6 By inserting the second file] There are two manner of doublings of the depth or of files; one in number, the other in place. In number, when one file is inserted into another, the Leader or first man of the second file standing behind the Leader of the first; the second behind the second, the third behind the third, and so forth of the rest: Or when the even files countermarch, and their Leaders place themselves behind the Bringers-up of the odde, their files following them; or (which cometh all to one) the files being whole, they divide themselves into two parts in the front, and halfe countermarch, and place themselves in the Reare of the other file to file: albeit the two last are Doublings both in number and place, and not in place alone. The true Doubling of the place alone is not Elian. The Insertion whereof I spake, remedieth this defect also. There it is said, that when 16 men (that is a file) are so extended, that they possesse as much length as 32 should doe, (that is, as 2 files) it is doubling of place. which is nothing else but changing of the Souldiers order into open order. For in their order they have 48 foote in depth; in their open order 96 foote in depth. In this Doubling of depth we must take heed that we make not the front of our Armie to narrowest we give oportunitie to the enemy to insircle, and incompasse it. Polybius noteth this a great fault in Marcus Atilius Regulus, at such time as he fought with the Carthaginians, and was taken prisoner. His words have this effect: ^k The Romans seeing the enemy order his battaile marched out against him full of courage. Being notwithstanding somewhat appalled at, and foreseeing the Elephants violence in comming on, they set their Darters before, and placed many maniples of Armed behind, one after another, and divided the Horse halfe into one wing, halfe into the other. Then making the whole battaile shorter, but deeper, then they were wont, they provided well against the Elephants, but not against the Horse, that farre exceeded theirs

in

in number. Being now come to hands the Roman horse overpressed with multitude of the Carthaginians quickly fled from either wing. But the foote of the left wing, partly auoyding the Elephants, partly condemning the Mercenaries, fell on, and charged the right wing of the Carthaginians, and putting it to flight, followed hard, and gaue chase euen to the trench. But of those, that were placed against the Elephants, the first sinking vnder the violence of the beasts, perished being ouerturned, and troden to death by heapes. The body of the battaile remained a while vnbroken by reason of the depth of them, that were after placed. But when the Reare of all, incompassed by the horse, was forced to turne about, and fight with them; and the other that had by force made way thorough the middeit of the Elephants, and were now behind their backs, came vp to the fresh Phalange of the Carthaginians, standing in good order, they were by them slaine. Thus fortune being contrary on all sides, the Romans for the most part were troden to death by the excessiue might of the beasts, and the rest died with the darts of the horsemen in the place, where they fought. The error of Atilius Regulus was in ordering his battaile too deepe; by means whereof it was easily incompassed, and distressed by the Carthaginian horse. ^m Appian likewise blameth Antiochus for ordering his Phalange 32 men in depth, where the Macedonian Phalange ought to but 16 deepe, shewing that by that overfight it was incompassed by the Romans, and overthrowne. I haue touched the historie in my notes before. Many other examples might be alledged, but these two are sufficient for our purpose.

^m Appian in
Synaxis 107. B.

The words of Cominand in doubling of the length by number.

Middle men double your Rankes to the right, or left hand.

By this Command the middle men with their halfe files march up to the front, in the spaces betwixt the files, and stand euen with the File-leaders, and the rest euen with the rest of the Rankes.

Doubling of the length in place.

Stand in your open order.

One halfe openeth their files to the right hand, the other to the left, and stand six foote one from another.

Doubling of the depth in number.

Double your files to the right or left hand.

The euen files fall into the spaces of the odde files.

Double your files by countermarch to the right or left hand.

The euen files countermarch, and fall behind the reare of the odde, and place themselves lineally after them, obseruing their first distances.

Divide your files and double them by countermarch to the right, or left hand.

Halfe the files divide themselves from the other halfe, and countermarch out behind the Reare, then turne their faces towards the place behind the Reare of the standing files, which remoued not; then march on, and place themselves orderly behind them file to file, then turne their faces, as at first.

Doubling the depth in place.

Rankes open behind to your open order.

The broad-fronted Phalange, the deep Phalange, or Herse, and the vneuen-fronted Phalange.

CHAP. XXX.

P *Lagiophalanx*, or the *broad-fronted Phalange*, is that, which hath the length much exceeding the depth.

Orthiophalanx, or the *deep Phalange* (commonly called the *Herse*) is that, which proceedeth by *wing* hauing the depth much exceeding the length. In generall I speach euery thing is called *Paramikes*, which hath length more then the depth; and that which hath the depth more, then the length, *Orthion*: and so likewise a *Phalange*.

The *Phalange Laxe*, or *vneuen fronted*, is that, which putterth forth one of the *wings* (which is thought fittest) toward the enemy, and with it beginning the *fight*, holderth off the other in a convenient distance, till oportunitie bee to advance

Of Parembale, Protaxis, Epitaxis, Prostaxis, Eutaxis, & Hypotaxis.

CHAP. XXXI.

P *Parembale*, or *infrision* is, when placing souldiers before we take off the hindmost, and ranke them within the distances of the first.

Protaxis, or *fore-fronting*, is when we place the *light-armed* before the *front* of the *armed*, and make them *fore-standers*, as the *File-leaders* are.

When we place the *light-armed* behind, it is called *Epitaxis*, as it were an *after-placing*.

Prostaxis, or *adioyning* is, when to both flanks of the *battaile*, or to one flanke, some part of the hindmost is added, the front of them, that are added, lying euen with the front of the *battaile*; such addition is called *Prostaxis*.

Eutaxis, or *Infrision*, is when it seemeth good to set the *light-armed* within the spaces of the files of the *Phalange* man to man.

Hypotaxis, or *Double-winging*, is when you bestow the *light-armed* vnder the wings of the *Phalange*, placing them in an embowed forme; so that the whole figure resembleth a three-fold gate, or doore.

How the motions of wheeling, double, and treble wheeling of the battaile are to be made.

CHAP. XXXII.

IT followeth to shew how a *battaile* may be turned or wheeled, and how after reduced to the first posture, or *Station*.

When therefore wee would accustome our *Troupes* to wheele the *battaile* to the

Hypotaxis, or double-winging

Entaxis, or insertion

Protaxis, or forefronting

Cap. 32.
The manner of wheeling

The first posture

Closing of files

The front

Closing of ranks forward

the right hand, we command the right-hand-file to stand firme, & the rest of the file to turne their faces to the right hand, and to moue close vp to the right hand file. Then to turne their faces, as they were at first: Then the hinder rankes to close forward: Then the whole battaile in that closeneſſe to wheele about the corner-file-Leader to the right hand. This done, if neede be to reduce it to the first posture, or Station, wee command euery man to turne about his face to the Target, or left hand (that is to looke the contrary way) Then to wheele about the body, that is, as it turned, closed, & fetted with the front to the right hand so to returne it againe to the place, from whence it made the wheeling; Then the file-Leaders to stand firme, and the rest to open their ranks behind; Then to turne their faces about, as they stood at first; Then the right-hand-file to stand fast, and the rest turning faces to the left hand to open their files; Then to stand; And lastly to turne their faces againe to the right hand: and so shall euery man haue his first posture.

But in case we desire to wheele to the left hand, we command the left-hand-file to stand still, and all the rest to turne their faces to the left hand, and moue forward close vp to the left hand file; Then to turne their faces as they were; Then to gather vp the hinder rankes; Then to wheele the battaile to the left hand, and stand; and so is it done, that was commanded. But if restitution to the first posture be needfull, we must doe, as we did in returning from the right. For euery man must turne about his face to the Pike; Then the whole battaile wheeling about the left-hand-corner-file-Leader must returne to the place, it had; Then all the file-Leaders stand firme, and turne about their faces, and the rest open their ranks in mouing forward and make Alte; Then the left hand file is to stand firme (for it hath the place it first had) and the rest turning their faces to the right hand to open their files, and moue forward, till they haue recouered their first distances; then to turne their faces as at first; and so shall euery man be in his first posture. Now if we would wheele the battaile about, to the pike we are to make 2 wheelings to the same side, so will it come to passe that the file-Leaders shall in the change haue their faces turned to the Reare, where before they had them looking out from the front. But in restoring to the first posture we command it to wheele about to the right hand; That is, we giue it two wheelings more the same way; So the file-Leaders will haue their faces set, as at first. Then we command the file-Leaders to stand firme, and the rest to open their ranks behind; then to turne their faces about; Then the right hand file to stand still (for it hath the right place) and the rest turning their faces to the right hand to march on, till the former distances are regained; then to make Alte. So is the battaile reduced to the first Station.

If you would haue the battaile turne about to the Target, you are to giue contrarie directions; That is, in stead of commanding a double wheeling to the Pike, to command a double wheeling to the Target; Then by making two turnes the contrary way, to vse the like changes, we spake of before.

There is likewise a treble wheeling of the battaile, when it turneth thrice to the same hand, namely to the Pike, or Target. The double wheeling to the Pike transferreth the Souldiers face from the front to the backe of the battaile: The treble wheeling to the Pike bringeth his face to the left flanke. The treble wheeling to the Target contrariwise to the right flank.

The Tactics

Notes.

BEfore in the 26 Chapter Aelian discoursed of wheeling, and the kindes thereof. The manner, how it is to be done, is reserved for this place, I neede not therefore remember any thing else, besides the words of command.

The words of command in Epistrophe.

The uttermost file on the right or left hand stand firme
The rest turne faces (to the side purposed) and march up to the file standing firme.
Faces as you were.
Close your ranks forward:
Whee the body (to the hand appointed) and when you haue your ground, stand.

Returning to the first Posture, or Anastrophe.

Faces to the right or left hand
Whee backe the body to the ground, if first had.
File-Leaders stand firme: the other ranks open to their first place.
Faces about (to which hand you will)
The corner file (to which the turning was) stand firme, the rest open to their first ground.
Faces as you were, and order your Pikes.

Perispasmos, or wheeling about.

In wheeling about, the same wordes to close the files, and ranks, are to be used, which were used in Epistrophe, there remaineth no more, then to say
Whee about your body, to the right, or left hand.

Anastrophe or returning to the first Posture.

Returne to your first Posture.
The same forme is used, that was held in the former returning unto the first posture for opening ranks and files.

Eperispasmos, or treble wheeling.

In this motion the same course is held, that was in the wheeling; But only that you command a treble wheeling. And the returning to the first Posture, or Anastrophe is all one, but for the same difference.

Of closing the battaile to the right, or left hand,
or to the middle.

CHAP. XXXIII.

IF we would close, or thicken the Phalange in the right wing, we are to command the right-wing-corner-file to stand still, and the rest turning faces to the Pike to aduance toward the right hand; Then to set their faces as they were, and to gather vp the ranks behinde. In reducing them to the first posture we are to command the file-Leaders to stand, and the rest turning about their faces to open their

The battail, or phalange, is to be
 The rest turne faces (to the side purposed) and march up to the first standing file.
 Faces as you were.
 Close your ranks forward:
 Wheele the body (to the hand appointed) and when you have your ground, stand.

Returning to the first Posture, or Anastrophe.

Faces to the right or left hand
 Wheele backe the body to the ground, it first had.
 File-Leaders stand firme: the other ranks open to their first place.
 Faces about (to which hand you will)
 The corner file (to which the turning was) stand firme, the rest open to their first ground.
 Faces as you were, and order your Pikes.

Perispasmos, or wheeling about.

In wheeling about, the same wordes to close the files, and ranks, are to be used, which were used in Epistrophe, there remaineth no more, then to say
 Wheele about your body, to the right, or left hand.

Anastrophe or returning to the first Posture.

Returne to your first Posture.
 The same forme is used, that was held in the former returning unto the first posture for opening ranks and files.

Eperispasmos, or treble wheeling.

In this motion the same course is held, that was in the wheeling; But only that you command a treble wheeling. And the returning to the first Posture, or Anastrophe is all one, but for the same difference.

Of closing the battaile to the right, or left hand,
 or to the middle.

CHAP. XXXIII.

If we would close, or thicken the Phalange in the right wing, we are to command the right-wing-corner-file to stand still, and the rest turning faces to the Pike to advance toward the right hand; Then to set their faces as they were, and to gather up the ranks behind. In reducing them to the first posture we are to command the file-Leaders to stand, and the rest turning about their faces to open their

mand the file-Leaders to stand, and the rest turning about their faces to open their

of Ælian.

their ranks behinde; Then to turne their faces as they were; Then the right-wing-corner-file to stand (for it hath the right place already) and the rest proceeding on to the Target to follow their Leaders, and observing their distances to turne their faces as at first. A contrarie course is to be held in thickning the *Phalange* to the left wing.

If the *Phalange* be to be closed in the midst, the *Diphalange* on the right hand must turne their faces toward the Target, and the *Diphalange* on the left hand their faces toward the Pike; Then move forward toward the midst of the *Phalange*; Then, after their true distance gained, to set their faces, as they were, and to gather up the Ranks behind.

When we would reduce the *Phalange* to the first posture, wee command to turne faces about; then to open the Ranks, and all to move on, but the first Rank; then to turne their faces againe, and the right *Diphalange* turning to the Pike, and the left *Diphalange* to the Target to follow their Leaders, till they have recovered their first distances. Then to set their faces, as they were.

This rule is to be observed in all turnings about of faces, when they are made out of closings, that the Pikes be aduanced, least they hinder the Souldier in making his turning.

The light-armed are to be taught, and exercised after the same manner.

Notes.

In the 11 Chapter the distances, that ought to be betwixt souldier and souldier, are particularly treated of. This Chapter sheweth, how they are to be gained, that is, how we are to proceede out of one distance into another. And because the open order is it, that is commonly begunne withall, it is here taught how from thence to passe to the rest, and to returne to it againe. The end of closings is spoken of before. In regard of place they are said to be of two kinds: One to the wing (right or left) the other to the midst of the *Phalange*. I cannot expresse the manner better, then by setting downe the wordes of command, or direction, which are these in

Closing to the right wing.

The right-wing-corner-file stand firme

The rest turne faces to the Pike, and move (according to the distance required) to the right hand.

Faces, as you were.

Close your hinder ranks forward, and order your Pikes.

Restoring to the first posture.

File-Leaders stand firme.

The other Ranks, turne faces about, and open behinde to the first distance.

Faces as you were.

The right-wing-corner-file stand firme; the rest turne faces to the Target, and proceede to your first distance.

Faces as you were; and order your Pikes.

Closing to the left wing.

It differeth not from the other, but that the moving is to the contrarie hand.

Closing

The Tactics

Closing to the middle of the Battaile.

*The right-wing turne faces to the Target, the left to the Pike.
Each move up to the middle of the Phalange, and stand at the distance named.
Faces as you were.
Close the hinder ranks forward, and order your Pikes.*

Restoring to the first Posture.

*The first ranke stand firme.
The rest turne faces about, and open the ranks to the first distance.
Faces as you were.
The files next the middle section stand fast, and the right wing turne faces to the Target, the left to the Pike, and move on till the first distance recovered.
Faces as you were, and order the Pikes.
We may not forget Alians generall rule for turning of faces out of Closings, that the Pikes be alwaies aduanced. For when you come up to the closeness required, the Pike vpon the shoulder will hardly admit turning of the face. The like falleth out when you would open from the Closing.*

*The vse, and aduantage of these exercises
of armes.*

CHAP. XXXIV.

THese precepts of turning about of faces, of wheeling, and double wheeling of the Battaile, and of reducing it to the first posture, are of great vse in suddaine approches of the enemy, whether hee shew himselfe on the right, or left hand, or in front, or in the reare of our march. The like may bee said of Counter-marches; Of which, the Macedonians are held to bee the inuentors of the Macedonian; the Lacedemonians of the Lacedemonian; and for this cause either to haue name accordingly. The Histories witnesse, that Philip (who much enlarged the Macedonian kingdome, and ouercame the Grecians in battaile at Cheronæa, and made himselfe Generall of Greece) and likewise his sonne Alexander (that in short time conquered all Asia) made small account of the Macedonian countermarch, vnlesse necessitie forced it; and that they both by the vse of the Lacedemonian became victorious over their enemies. For the Macedonian countermarch the enemy falling vpon the reare, is cause of great confusion; in as much as the hindermost dismarching toward the front, and making a shew of running away, it more encourageth, and emboldneth the enemy to follow. For feare, and pursuit of the enemy [ordinarily] accompanieth that kinde of countermarch. But the Lacedemonian is of contrarie effect. For when the enemy sheweth himselfe in the reare, the Leaders with their followers brauely aduancing, and opposing themselves, it striketh no small feare, and terror into their mindes.

first of the right-induction, of the Cœlembolos, and
the Triphalange to be opposed against it.*

CHAP. XXXVI.

BEing now to speake of *marshing* I will first giue to vnderstand, that some kind of *marsh* is a *Right-induction*, other some a *Deduction* on the right, or left hand; And that in a *single*, or *double*, or *treble*, or *quadruple-sided-battle*. In a *single*, when one enemy is feared; in a *double*, when two; in a *treble*, when three; in a *quadruple*, when the enemy purposeth to giue on on all sides. Therefore the *marsh* is vnderaken sometimes in a *single Phalange*, sometimes in a twofold *Phalange*, or else in a threefold *Phalange*, or in a fourfold *Phalange*.

A *right-induction* is, when one body of the same kinde followeth another; as if a *Xenaggy* lead, and the rest follow *Xenaggy*-wise. Or a *Tetrarchy* lead, and the rest follow according to that forme. It is so called, when the *marsh* stretcheth it selfe out into a wing hauing the *Depth* much exceeding the length.

Against it is opposed the * *Cœlembolos*, which is framed, when the *Antistomos* * *Diphalance* disioyneth the Leading-wings, closing the *Reare* in manner of the letter V: as the figure after placed doth teach, In which the *front* is disscenered, & the *reare* ioyned, and knit together.

For the *Right-induction* pointing at the middest of the enemies battaille, the *Cœlembolos* quickly opening before serueth both to frustrate the charge of the *front*, and to clasp in, and circumuent the *flankes* of the *right-induction*.

Further-

* It follow
Wedge.
* Double
Phalange.

The Tactics

* Treble Phalange.

Furthermore a * *Triphalange* is to be set against the *Calembolos*, one *Phalange* fighting against one *wing* of the *Calembolos*; The second against the other, and the middle, and third forbearing, and expecting a time fit to charge.

Of Paragoge, or Deduction.

CHAP. XXXVII.

Paragoge, or Deduction is, when the *Phalange* proceedeth in a *wing* not by *file*, but by *ranke*, having the Commanders, or *file-Leaders*, either on the right hand, which is called a *right-hand-Deduction*, or on the left hand, which is called a *left-hand-Deduction*. For the *Phalange* marcheth in a *double*, *treble*, or *quaduple-side* according to the place, and part, it is suspected, the enemy will give on. And both the *Paragoges* beginning the fight in flanke doe make the length double to the depth. This forme of fight was deuised to teach a Souldier to receiue heedfully the charge of the enemy not onely in front, but also in flanke.

Of the Phalange Amphistomus.

CHAP. XXXVIII.

* Double fronted Phalange.

The *Phalange* * *Amphistomus* (for it is so called, because it hath two fronts, and that part of the battaile, that is set, and aduanced against the enemy, is called a front) Seeing then in this forme the middlemost are ordered backe to backe, and those in front and *reare* make head against the enemy, the one being Commanders of the front, the other of the reare, therefore it is called *Amphistomus*. It is of great vse against an enemy strong in Horse, and able to giue a hot, and dangerous charge; and principally practised against those *Barbarians*, that inhabit about the riuer *Ister*, whom they also call * *Amphippi*, because they change Horses in fight.

* Horsemen that use two horses, one spare, the other being ridden upon.

The Horse battaile to encounter this forme hath a *Tetragonall* shape, being for the purpose diuided into two *broad-squares* (they are *broad-squares*, that haue the front twice as much as the depth) And these *Squares* are opposed seuerally against the diuisions of the foot-battaile.

Of the Phalange Antistomus.

CHAP. XXXIX.

* Double flanked Phalange.

The *Phalange* * *Antistomus* is like the *Amphistomus* the forme being a little altered; so that it accustometh the souldier to resist the seuerall kindes of incursions of Horse. All that hath bene spoken concerning the former *Phalange* both for foote, and Horse agreeth with this figure also. Herein they differ, that the

And being also diuided into a *Diphalange* it maketh the fore-front with the one, and the after-front with the other *Phalange*.

Of the Diphalange Antistomus.

CHAP. XL.

A *Diphalange Antistomus* is that, which hath the file-Leaders placed not in *Deduction* outwardly, but inwardly face to face one against an other, and the reare-Commanders without, one halfe in a right, the other in a left-hand *Deduction*.

This forme is vsed when the Horse giue on and charge *Wedge-wise*. For the *Wedge* shooting forth into a point, and hauing the Commanders following in flanke, and endeavouring to disseuer, and breake the front of the foote, the Leaders of the foote, foreseeing their purpose, place themselves in the midst with intent either to repulse them, or else to giue them a thorough passage without losse. For the *Wedge* flieth vpon the foote in hope to charge the multitude in the midst, and to disorder the whole battaile: And the foote Commanders conceiuing well the fury of that kinde of forme, leaue a little space betwixt either front, and stand like walles on both sides, and iointly turning their faces toward the midst, giue them a fruitlesse, and empty passage.

This forme of Horse-battaile is called a *Wedge* by *Tallicks*, which was inuented by *Philip* King of *Macedon*, who placed his best men before, that by them the weaker sort might be held in, and enabled to the charge: as we see in a spere, or in a sword, the point whereof by reason of the sharpnesse quickly piercing maketh way for, and letteth in the middle blunt iron.

Of the Diphalange called Peristomus.

CHAP. XLI.

THE *Phalange* of the *Diphalange Peristomus* proceedeth by *deduction* in a wing, the oblique *deduction* on the right hand hauing the file-Leaders without, the left hand oblique *deduction* the reare-Commanders within. The figure sheweth the intent of them that fight so ordered. For the battaile going to charge, hauing beene at first *Tetragonall*, diuiderh it selfe into two oblique wings (the right, and the left) of purpose to enclose the aduerser *square-battaile*. And they fearing to bee inclosed transforme themselves into two severall marching *Phalanges* directing one against the right, the other against the left wing. Therefore it is called *Peristomus*, as hauing the front bent against the enemy both waies.

N

A

Of the Diphalance called Homoiostomos, and
of the Plinthium.

CHAP. XLII.

* A double-
fronced Pha-
lange.

A Diphalance* Homoiostomos is so named because a whole file (that is 16 men) moving by it selfe, another file followeth it. And it is therefore called Homoiostomos, because they that follow, follow in a like figure.

* A four-sided-
battail square
of men and
ground.

This kinde is opposed against the Plinthium. * Plinthium is a forme of Battaile, that hath the sides equall both in figure and number. In figure because the distances are euery where equall; In number because there are as many men in length, as in depth. In this four-sided-Battaile are none in the flanks, but armed, without Archer, or Slinger to helpe. When therefore two Phalanges march together, one by another, and both haue their Leaders either in a right-hand, or left-hand Deduction it is called a Diphalance Homoiostomos.

Of the Diphalance Heterostomos.

CHAP. XLIII.

* A double Pha-
lange with con-
trary flanks.

A Diphalance* Heterostomos is that, which proceedeth by Deduction, hauing the Leaders of the former Phalange in a right-hand-Deduction, and of the following Phalange in a left-hand-Deduction: so that the battailes march counter-changeably, one hauing the Leaders in one flanke, and the other in the other: and so the rest.

Againe of the Battaile called a Rhombe, and of the
foote-halfe moone to encounter it.

CHAP. XLIV.

THe battaile framed in forme of a Rhombe, was first inuented by Ileon the Thessalian, and was called Ile after his name; and to this forme he exercised and accustomed the Thessalians. It is of good vse, in that it hath a Leader at euery corner, at the point the Capitaine, of the Troupe, the reare-Commander behinde, and on either side the flanke-commanders. The foote battaile, fittest to affront this, is the Menoides, or Cressant, hauing both the wings stretched out, and in them the Leaders, and the middest imbowed to inuiron and wrap in the Horsemen in their giuing on. Whereupon the Horsemen ply the foot a farre off with flying weapons, after the manner of the Tarentines, seeking thereby to dissolve, and disorder their circled frame of marching. Tarentum is a City of Italy, the Horsemen whereof are called Acrobolists, because in charging they first cast little Darts, and after come to hands with the enemy.

Of the Diphallange called Homoiostomos, and of the Plinthium.

CHAP. XLII.

The *Homoiostomos* is so named because a whole file (that is 16 men) by it selfe, another file followeth it. And it is therefore called because they that follow, follow in a like figure. It is opposed against the *Plinthium*. * *Plinthium* is a forme of Battaille, so opposed against the *Homoiostomos*. In figure because the distances equall both in figure and number. In figure because the distances are equall; In number because there are as many men in length, as in this *four-sided-Battaille* are none in the flanks, but armed, without need of helpe. When therefore two *Phalanges* march together, one against the other, both have their Leaders either in a right-hand, or left-hand called a *Diphallange Homoiostomos*.

Of the Diphallange Heterostomos.

CHAP. XLIII.

The *Heterostomos* is that, which proceedeth by *Deduction*, having Leaders of the former *Phallange* in a *right-hand-Deduction*, and of the following in a *left-hand-Deduction*: so that the battailes march counter one having the Leaders in one flanke, and the other in the other.

Again of the Battaille called a Rhombe, and of the foot-halfe moone to encounter it.

CHAP. XLIV.

The Battaille framed in forme of a *Rhomb*, was first invented by *Leon the Thessalian*, and was called *He* after his name; and to this forme he exercised the *Thessalians*. It is of good use, in that it hath a Leader at cue-point the point the Captaine, of the Troupe, the reare-Commander being on either side the flanke-commanders. The foote battaille, first to be used, is the *Menoides*, or *Cressant*, having both the wings stretched out, and the Leaders, and the middest imbowed to inuiron and wrap in their giuing on. Whereupon the Horsemen ply the foot a farre off with weapons, after the manner of the *Tarentines*, seeking thereby to disorder their circled frame of marching. *Tarentum* is a City of Italy, men whereof are called *Acrobolists*, because in charging they first cast; and after come to hands with the enemy.

and to the

Of the Horse-battaile Heteromekes, and of the
Plagiophalange to be opposed against it.

CHAP. XLV.

THe Horse battaile * *Heteromekes* is that, which hath the *depth* double to the *length*. It is profitable in many respects. For seeming to cary but few in so small a bredth it deceiveth the enemy, and it easily breaketh his forces with the thicknesse, and strength of the embartailing, and may without perceiuing, bee lead thorough straight, and narrow passages.

The Foot-battaile to encounter it is called the *Plagiophalange*, or *broad-fronted* Battaile. For being but slender in *depth* it beareth forth and extendeth it selfe in *length*; so that, albeit it be broken in the middest with the charge of the Horse; yet is nothing broken, but a little of the *depth*; and the fury of the Horse is carried not vpon the multitude of the foote, but straight, and immediately, into the open field. And for that cause is the *length* thereof much exceeding the *depth*.

Of the Horse-battaile Heteromekes, and of the
Plagiophalange to be opposed against it.

CHAP. XLV.

THe Horse battaile * *Heteromekes* is that, which hath the *depth* double to the *length*. It is profitable in many respects. For seeming to carry but few in so small a breadth it deceiveth the enemy, and it easily breaketh his forces with the thickness, and strength of the embattailing, and may without perceiuing, be lead thorough straight, and narrow passages.

The Foot-battaile to encounter it is called the *Plagiophalange*, or *broad-fronted* Battaile. For being but slender in *depth* it beareth forth and extendeth it selfe in *length*; so that, albeit it be broken in the midst with the charge of the Horse; yet is nothing broken, but a little of the *depth*; and the fury of the Horse is carried not vpon the multitude of the foote, but straight, and immediately, into the open field. And for that cause is the *length* thereof much exceeding the *depth*.

Of another kinde of Rhombe for Horsemen, and of the
foote-Battaile Epicampios Emprosthia to
encounter it.

CHAP. XLVI.

ANother sort of *Rhomboides* there is, whereof I need say no more, but that it fileth, and ranketh not. For I haue before shewed the vse, and that *Aleon* the *Thessalian* was the inuentor, and that *Isoson M-deas* husband most put it in practise. The vse thereof is great being directed, and lead, in the foure corners by the *Captaine*, the *Lieutenant*, and the two flanke-Commanders. It is commonly fashioned of Archers on Horsebacke, as the *Armenian*, and *Persian* manner is.

Against it is opposed the foote-battaile called * *Epicampios Emprosthia*, because the *circumduction of the front* is like an embowing. The end of this forme is to deceiue and ouer-reach the Archers on Horsebacke either by wrapping them in the void space of the front, as they charge, and giue on vpon the spurte, or else disordering them first with their wings, and breaking their fury, by ouerthrowing them finally with their ranks about the middle *Ensignes*. This kinde of Battaile was deuised to entrappe and beguile. For opening the middle hollownesse it maketh shew but of a few, that march in the *wings*, hauing notwithstanding thrice as many following, and seconding, in the reare. So that, if the *wings* be of power sufficient for the encounter, there needeth no more; if not, retiring easily on either side, they are to ioyne themselues to the buike of the Battaile.

Of the foot-battaile called *Cyrte*, which is to be set against the *Epicampios*.

CHAP. XLVII.

* The conuex-battaile.

The Battaile to be opposed against the *Epicampios* is called * *Cyrte* of the circumferent forme. This also maketh semblance of small forces by reason of the conuexitie of the figure. For all round things appeare little in compasse; and yet stretched out in length, and singled, they proue twice as much, as they appeared to be: as is euident in pillars, which are round; and therefore in fight shew the one halfe, and conceale the other.

The greatest piece of skill in embattailing, is to make a shew of few men to the enemy, and indeed to bring twice as many to fight.

Of the Tetragonall Horse-battaile and of the wedge of foote to be opposed against it.

CHAP. XLVIII.

* Four-square.

The * *Tetragonall Horsebattaile* is square in figure, but not in number of men. For in *Squares* the number is not alwaies the same: and the Generall for his aduantage may double the length to the depth. The *Persians*, *Sicilians*, and most of the *Gracians* doe affect this forme, and take it to bee easie in framing, and better in vse.

* Wedge.

Against it is opposed the *Phalange* called * *Embolos*, or *Wedge* of foote, all the sides consisting of armed men. This kinde is borrowed of the *Horse-mans wedge*. And yet in the *Horse-wedge*, one sufficeth to lead in front, where the Foote-wedge must haue three, one being vnable to beare the sway of the encounter. So *Epaminondas* as the *Theban* fighting with the *Lacedemonians* at *Mantineia*, overthrew a mightie power of theirs by casting his armie into a *Wedge*. It is fashioned if the *Antistomus Dipbalangy* in marching ioyned the front of the wings together, holding them open behind like vnto the letter *A*.

Of the foot-Battaile called *Plœsum*, and of the winding, or saw-fronted foot-battaile to encounter it.

CHAP. XLIX.

The Battaile *Plœsum* hath the length much exceeding the depth. And it is called *Plœsum*, when armed foote are placed on all sides, the Archers, and Slingers, being throwne into the midst. Against this kinde of Battaile is set the winding-fronted-battaile, to the end that with the vnequall figure, they may

Of conueying the Carriage of the Army.

CHAP. LI.

THe leading of the carriage, if any thing else, is of great importance, and requireth a speciall Commander. It may bee conueyed in fīue manners, either before the Armie, or behinde, or on the one flanke, or the other, or in the midst.

Before the Army, when you feare to bee charged behind. Behind the Army, when you would leade toward the enemy. VVhen you feare to bee charged in flanke on the contrary side. In the midst, when a *hollow-Battaile* is needfull and fit.

*Of the words of Command, and certaine obser-
uations about them.*

CHAP. LII.

Last of all wee will briefly repeate the words of direction, if we admonish, first that they ought to be short, then that they ought to be without *double-signification*. For the Souldiers, that in haste receiue direction, had neede to take heede of doubtfull words, least one doe one thing, and another the contrarie. As for the

traîne out those of the *Plasum* to cope with the foremost of the *winding-fronted-bataile*, and by that meanes dissolue, and disorder the thickest of the same. And the file-Leaders of the *winding-bataile* are to obserue, and make the file-Leaders of the *Plasum*, that if they still maintaine their closenesse, and fight feruently, they also incounter them in the like forme; if the *Plasum* file-Leaders feuer themselves, and spring out from their maine force, then they likewise bee ready, to meet them man to man.

Of *Hyperphalanges*, and *Hyperkeras*, and
of *Attenuation*.

CHAP. L.

Hyperphalanges, or *ouer-fronting* is, when both wings of the *Phalange* overreach the enemies front. *Hyperkeras*, or *ouerwinging* is, when with one of the wings we over-reach the front of the enemy. So that hee, that *ouerfronteth*, *ouerwingeth*, but hee, that *ouerwingeth*, *ouerfronteth* not. For they, that match not the enemy in multitude, may yet *ouerwing* them.

Attenuation or lessening is, when the depth of the battaile is gathered vp, and in stead of 16 men a smaller number is set.

Of conveying the Carriage of the Army.

CHAP. LI.

The leading of the carriage, if any thing else, is of great importance, and requireth a speciall Commander. It may bee conveyed in five manners, either before the Armie, or behinde, or on the one flanke, or the other, or in the middest.

Before the Army, when you feare to bee charged behind. Behind the Army, when you would leade toward the enemy. When you feare to bee charged in flanke on the contrary side. In the middest, when a *hollow-Battaile* is needfull and fit.

Of the words of Command, and certaine obseruations about them.

CHAP. LII.

Last of all wee will briefly repeate the words of direction, if we admonish first that they ought to be short, then that they ought to be without *double-signification*. For the Souldiers, that in haste receiue direction, had neede to take heede of doubtfull words, least one doe one thing, and another the contrarie. As for the

The Tacticks

purpose: If I say *turne your face*, some it may be, that heare mee, will turne to the right, some to the left hand, and so no small confusion follow. Seeing therefore these words *turne your face* import a generall signification, and comprehend *turning to the right, or left hand*, we ought in stead of saying *turne your face to the pike*, to pronounce it thus: *To your Pike turne your face*, that is, we ought to set the particular before, and then inferre the generall. Like reason is; if you say, *turne about your face, or countermarch*. For these are also generall words; And therefore wee should do well to set the particular before. As to the *Pike turne your face about*, or to the *Target turne your face about*. Likewise the *Lacedemonian countermarch*, nor the *Counter march Lacedemonian*. For if you place the word *Countermarch* first, some of the Souldiers will happily fall to one kind, other to another kinde of *Countermarch*. For which cause words of double sense are to be auoided, and the special to be set before the generall.

Of silence to be vsed by Souldiers.

CHAP. LIII.

BUt aboue all things silence is to bee commanded, and that heed be giuen to directions: As *Homere* specially signifieth in his discriptions of the *Graecian* and *Troian* fights.

*The skilfull Chief-taines pressed on, guiding with carefull eie
Their Armed troupes, who followed their Leaders silently.
You surely would haue deem'd, each one of all that mighty throng
Had been bereft of speech, so bridled be his heedfull tongue,
Fearing the dread Commanders checke, and awfull best's among.
Thus march't the Greekes in silence, breasting flames of high desire,
And feruent zeale, to backe their friends, on foes to wreake their ire.*

As for the disorder of the Barbarians he resembleth it to birdes saying.

*As shoales of fowle, geese, cranes, and swannes with necks far stretched out,
Which in the stumy fennes Caisters winding streames about
Share here, and there, the liquid skie, sporting on wanton wing.
Then fall to ground with clanging noise, the fennes all ouer ring:
None otherwise the Troians fill the field with heaped sounds
Of broken, and confused cries, each where tumult abounds.*

And againe:

*The Captaines marshall out their Troupes ranged in goodly guise;
And forth the Troians pace like birds, which lade the aire with cries.
Not so the Greekes, whose silence breathed flames of high desire,
Fervent in zeale to back their friends, on foes to wreake their ire.*

CHAP.

The words of Command.

CHAP. LIIII.

Thus then are we to command.

TO your Armes.
Stand by your Armes.
Carriage away from the battaile.
Marke your directions.
Seperate your selsaes.
Aduance your Pikes.
File and ranke your selues.
Looke to your Leader.
Reare Commander order your file.
a Keepe your first distances.
b Faces to the Pike, moue a little further, stand so, as you were.
b Faces to the Target, moue a little further, stand so.
b Faces about to the Pike, moue a little further, stand so.
c Double your Depth. To your first posture.
c Double your Length. To your first posture.
d The *Lacedemonian countermarch*. To your first posture.
d The *Macedonian countermarch*. To your first posture.
d The *Chorasan countermarch*. To your first posture.
e Battaile wheele to the Pike. To your first posture.
e Battaile wheele about to the Pike. To your first posture.

a Before cap. 117.

b Before cap. 117.

c Before cap. 117.

d Before cap. 117.

e Before cap. 117.

These precepts of the Art *Tacticke* (most inuincible *Caesar*) I have laide out to your Matie, which will be a meanes of safety to such, as shall vse them, and of the ouerthrow of their enemies.

N 4

The

THE EXERCISE OF THE ENGLISH IN

the seruice of the high and mighty Lords,
the LORDS the ESTATES of the vni-
ted PROVINCES in the Low
COUNTRIES.

HE Soldiers are diuided into two kindes, *Foot* and *Horse*. The *Foot* againe are of two kindes; *Pikemen* and *Musketiers*.

Pikemen are armed with a head-peece, a Curace and Tases defensiu, and with a Pike of fifteene foote long, and a Rapier offensive. The Armour is all yron; the Pike of Alden wood for the Steale, and at the vpper end an yron head of about a handfull long with cheekes about the length of two foote, and at the butt-end a round strong socket of yron ending in a pike, that is blunt, yet sharpe enough to fixe to the ground. The forme thereof is expressed in the grauen figure.

The *Musketier* hath a head-peece for defence, a *Musket* the barrell of the length of 4 foote, the bore of 12 bullets to the pound; a Banelier, to which are fastned a convenient number of charges for powder (sometimes as many as 15 or 16) a lether bagge for bullets, with a pruning yron; a Rest for the *Musket* with an yron forke on the vpper end to support it in discharging, and a pike on the nether end to sticke into the ground; lastly, a Rapier. The figure of this armour also is here inserted.

These soldiors, both Pike-men, and Musketiers, are diuided into Companies; and euery Company consisteth, halfe of Pikes, halfe Musketiers. The Companies are some more in number, some lesse. Some reach to 300 men, some 200, some 100, some 90, some 80, some 70. Euery Company hath these officers of the field: A Capitaine, a Lieutenant, an Ensigne, 2 Serieants, 3 Corporalls, two Drommes; and for other vses a Clarke, a Surgion, and a Prouost.

Companies are compacted into Regiments; and the Regiments commanded by Coronells. Regiments containe nor alwaies a like number of Companies, some hauing 10, some 11, 12, 13, 14, 15, some 30 Companies and aboue. In euery Regiment are a Coronell, a Lieutenant Coronell, a Serieant Maior, all officers of the field; a Quarter-master, and 2 Prouost-martiall for other employments. It shall not be greatly to the purpose to mention higher officers, then Coronells, my principall intent being no other, then to set downe the armes and exercise of our Nation in the said vnited Provinces. Their armes are spoken of. Their exercise followes.

The

The Exercise of a foote Companie.

First both Pikes and Muskets are ordered into files of 10 deepe. The Musketiers are sometime placed before, sometime in flanke, sometimes in the reare of the pikes.

To exercise the motions, there are two distances to be obserued.

The first is when euery one is distant from his fellow 6 foote square, that is in file and ranke 6.

The second is when euery Souldier is 3 foote distant one from the other aswell in file, as in Ranke.

And because the measure of such distances cannot be taken so iustly by the eye, the distance of 6 foot betwixt the files is measured, when the Souldiers stretching out their armes doe touch one an others hands: and betwixt the Rankes, when the ends of their pikes come well nigh to the heeles of them, that march before. And the measure of 3 foote betwixt the files is, when their elbows touch one another; betwixt the rankes, when they come to touch the ends of one anothers Rapiers.

For to march in the field, the distance of 3 foote from file to file is kept, and of 6 foote from Ranke to Ranke.

To order themselves in Battaile, as also to goe towards the enemy, the distance of 3 foote in file, and ranke, is obserued; and likewise to conversion or wheeling.

The Musquetiers also going for to shoote by Rankes keep the same distance of 3 foot, but going to skirmish they goe *ala Disbandade*, which is out of order.

There is yet another sort of distance, which is not vsed, but for to receiue the enemy with a firme stand, and serueth for the pikes onely (for the Musquetiers cannot be so close in files, because they must haue their Armes at liberty) & that is, when euery one is distant from file to file a foote and a halfe, and 3 foote from Ranke to Ranke. And this last distance is thus commanded, *Close your seiues thoroughly*. But it is not to be taught the Souldiers, for that, when necessitie shall require it, they will close themselves but too much, of their owne accord without command.

To begin therefore to doe the exercises, the Company is set in the first distance, to wit of 6 foote in file, and ranke, and thus is said

Stand right in your files.

Stand right in your rankes.

Silence.

To the right hand.
As you were.

To the left hand.
As you were.

To the right hand about.

To the left hand as you were.

To the left hand about.

To the right hand as you were.

These are the generall words of Command which are often to be vsed.

You must note, that when they are commanded to be as they were, they must returne thither, from whence they parted; and if they turned to the right hand, they must returne to the left, and so in counter-march.

Charge your Pikes.
Slope your Pikes.
To the right hand charge your Pikes.
Slope your Pikes.
To the left hand charge your Pikes.
Slope your Pikes.
Charge your Pikes to the Reare.
Slope your Pikes.
Order your Pikes.

This must be obserued charging your Pikes with a firme stand to see the right foote behind, and charging the Pikes marching to see the left foote before.

For the Musques.

THe Postures in his Excellencies Booke are to be obserued; but in exercising you must onely vse these three termes of direction.

Make ready.

Present.

Give fire.

Your Musquetters must obserue in all their motions to turne to the right hand, and that they carry the mouth of their peeces high, as well when they are shouldred, as in pruning, and also when they hold their pannes garded, and come vp to give fire.

The enemy before the Vanguard.

In advancing towards an Enemy, when they doe not skirmish loose and disbanded, they must give fire by Ranks after this manner.

Advancing.

Two Ranks must alwaies make ready together, and aduance ten paces forward before the body, at which distance, a Sergeant (or when the body is great some other officer) must stand, to whom the Musquetters are to come vp before they present, and give fire, first the first ranke. And whilst the first gives fire, the second Ranke keepe their Musquets close to their Rests, and their pannes garded, and as soone, as the first are fallen away, the second presently present, and give fire, and fall after them.

Now as soone as the first two Ranks doe moue from their places in the front: The two Ranks next them must vnshoulder their Musquets, and make ready, so as they may aduance forward ten paces as before as soone as euer the two first ranks are fallen away; and are to doe in all points as the former. And all the other Ranks through the whole diuision must doe the same by twos, one after another.

A Manner

A manner there is to give fire retyring from an Enemy, which is performed after this sort.

As the Troope marcheth the hindermost ranke of all keeping still with the Troope is to make ready, and being ready, the fouldiers in that ranke turne altogether to the right hand and give fire, marching presently away a good round pace to the front, and there place themselves in ranke together iust before the front: As soone as the first ranke turne to give fire, the ranke next makes ready, and doth as the former, and so the rest.

The enemy in the Reare.

We give fire by the flanks thus. The vppermost file next the Enemy must be commanded to make ready, keeping still along with the body, till such time, as they be ready, and then they turne to the right, or left hand (according to the sight of their enemies either vpon the right, or left flanke) and give fire altogether. When they haue discharged they stirre not, but keepe their ground, and charge their Peeces againe in the same place, they stand. Now as soone as the foresaid file doth turne to give fire, the vtermost next it makes ready alwaies keeping along with the Troope till the *Bringer-up* be past a little beyond the Leader of that file, that gaue fire last; and then the whole file must turne, and give fire, and doe in all points as the first did, and so the rest one after the other. A Sergeant, or if the Troope be great some other better qualified Officer must stand at the head of the first file, and as soone as the second file hath given fire, and hath charged, he is to lead forward the first file vp to the second file, and so to the rest one after another, till he hath gathered vp againe the whole wing, and then he is to ioyne them againe in equall front with the pikes.

The enemy in the flank.

Last of all the Troope or whole wing of Musquetters makes ready altogether, and the first ranke without advancing gives fire in the place they stand in; and speedily, as may be, yet orderly falls away, all the ranks doing the same successively one after another.

The enemy in front.

without advancing.

Thus much of the armes and exercise of the foote.

The horse enue.

The order and discipline holden in Horse-troopes, or in the Cavalry.

THE Cavalry hath for his Cheife the Genetall, the Lieutenant Generall, and the Comissary generall.

To the Cavalry there is a Quarter-master generall, and a Provost generall belonging; the Iustice resorteth to the Councell generall of warre of the Army.

The Cavalry is of two sorts. *Harquebusers*, and *Cuirassiers*.

The first haue for defensie armes, the *Cuirace* pistoll prooffe, and a light head-peece. For offensie the *Cabine* of 3 foote, 3 inches length, and the bore of 20 bullets in the pound, and *Pistols* like vnto the *Cuirassiers*.

The *Cuirassiers* haue for defensie Armes a compleat armour, the *Cuirace* pistoll prooffe. For offensie two pistolls hauing the barrell of 26 inches in length, and the bore of 36 bullets in the pound. See the figure of Armes.

For the order in Regiments the 40 Companies entertained by the States doe make eleuen Regiments.

The Regiment of the Generall hath alwaies the Vanguard, the others alternately

natiuely and by turnes, and he that hath it this day, the next day after hath the Reare, the rest following in the same sort.

Those which command the Regiments are called *Coronells*. The Regiments are compounded of 3, or 4 Companies (of 3 at the least) and the Coronells Company marcheth alwaies on the left wing of the Regiment.

The Captaines receiue orders from their Coronells, as these from the Com-missary Generall.

All the Companies are diuided in 3 equall parts, which are called Squadrons, and distributed to the three chiefe officers; Captaine, Cornett, and Lieutenant, hauing each of them adioyned an old Souldier, which they doe know to bee of more desert, called a Corporall.

Marching in the field, every Officer marcheth at the head of his Squadron, the Lieutenant excepted, which marcheth behind with the Quartermaster; and the third Corporall at the head of the Lieutenants Squadron.

The Companies are diuided by files, and rankes, the file 5 deepe, and no more, how strong soeuer the Company be.

They obserue that in marching in battaile they must be close together, and to doe the *Motions* there must be 6 foote distance from one Horseman to another.

The Companies being in battaile, there must be 25 paces distance left between every Company, and 50 betwixt every Regiment at the least.

The exercise of Armes for the Cavalry.

To open the Squadron you must first open the rankes and after the files.

To close the Squadron, you must first close the files, and after the rankes.

There be two sorts of distances betwixt the files; the one close, and the other open.

In the Close there must be no distance or intervalls betwixt the files, to the open there must be 6 foote betwixt every file.

Likewise there must be two sorts of distances betwixt the rankes; the Close, which must be without intervall or streete; and the Open, which must be six foote distance.

In a march it must be vnderstood, that the rankes must neuer be more opened, then the open distance of 6 foote.

And to the end that the Troope may march in good order, and obserue well their distance betwixt the rankes, without that the last may be forced to runne or goe to fast, there must be heed taken, that so soone, as the first rankes begin to march, all the Troope, and the Reare also at one time march.

The words of Command are

Open your Rankes.
